Polytechnic Institute of New York University Mission Statement

To excel as a leading high-quality research university engaged in education, discovery and innovation with social, intellectual and economic impact in the New York region, the nation and the world.

To achieve this mission, we educate, discover and invent. We engage students seeking educational achievement and opportunity, faculty seeking excellence and relevance, and organizations seeking solutions and talent. We creatively bring intellectual rigor, technological innovation and a passion for science to the communities where we work and live and to the citizens of the world.

We innovatively extend the benefits of science, engineering, management and liberal studies to critical real-world opportunities and challenges, especially those linked to urban systems, health and wellness and the global information economy.

Our learning environment develops the skills to discover and invent, stimulates innovation and encourages entrepreneurship. We refer to this environment of invention, innovation and entrepreneurship as i²e. It is what has produced generations of Poly Thinkers—action-oriented learners who are capable of thinking globally and across multiple disciplines.

General Information

The Polytechnic Institute of New York University catalog is an official publication of the Institute. The catalog provides information about academic programs and a summary of Institute policies and procedures and selected activities and services. Information concerning admission, academic regulations and requirements, student services, academic offerings and a listing of the administrative officers and faculty are included. Every effort has been made to publish a complete and accurate catalog. However, requirements, deadlines, tuition, fees, curricula, courses and staffing are subject to change at any time without advance notice or obligation. Some course descriptions may vary from actual course content because of advancements in the discipline, emphasis of individual instructors or decisions of the faculty to change the scope or content of the course.
Institute Policies

Polytechnic Institute of NYU complies with the laws, regulations and orders that provide for and impose obligations on employers with respect to the management of their equal employment opportunity and affirmative action programs.

Accordingly, Polytechnic Institute of NYU will conduct its business and practices in a manner that fully complies with and supports Presidential Executive Order 11246, as amended. The Institute prohibits discrimination against any employee or applicant for employment based on race, color, religion, sex, national origin, age, disability, sexual orientation, marital status, genetic predisposition or carrier status, military status, veteran status including disabled veterans, veterans of the Vietnam era, recently separated veterans, other protected veterans, and Armed Forces service medal veterans, or any other status protected by law. The Institute takes affirmative action to employ, advance in employment and otherwise treat qualified individuals without discrimination based on their status as required by Executive Order 11246, as amended.

Inquiries about the above policies may be directed to the Office of Affirmative Action, Polytechnic Institute, Six MetroTech Center, Brooklyn, New York 11201.

The Institute is authorized under federal law to enroll nonimmigrant alien students.

This catalog is not intended to be, and should not be regarded as, a contract between Polytechnic Institute and any student or other person.

Note: This online version of the Catalog contains revisions and updates in courses, academic programs, academic requirements and policies, and staffing that occurred after the publication of the PDF version in September 2011. This web-based catalog is the official catalog of record of the Institute and will be amended on a yearly cycle as needed. Archives of all PDF-based catalogs are available under the "Archived Catalogs" navigation on the left sidebar.

Institute Profile

Introduction

Polytechnic Institute of New York University (NYU-Poly) is the nation’s second oldest private engineering institution and one of the New York metropolitan area’s preeminent resources for science, technology, engineering and mathematics education and research. A private coeducational institution, NYU-Poly has a distinguished history in electrical engineering, polymer science and aerospace and microwave engineering. The Institute is focused on demanding societal challenges in the areas of urban systems, health and wellness and global information technology. These challenges include mapping, securing and extracting infosphere information; creating intelligent sensor systems; engineering smart cities; and tailoring biomolecular interactions. The Institute prepares graduates to play leading roles in these areas through invention, innovation and entrepreneurship (i2e).

The student body includes more than 1,700 undergraduates and approximately 2,400 graduate students. Twenty percent of the undergraduate population are women; 9 percent are black, 12 percent are Hispanic and 31 percent are Asian. Polytechnic undergraduate programs prepare students in science, technology, engineering and mathematics education and research for immediate entry into the professional practice of their specialties or for continued graduate study.

Polytechnic is accredited by the Middle States Association. Undergraduate programs in civil, computer, chemical, electrical and mechanical engineering are accredited by the Accreditation Board for Engineering and Technology (ABET). The undergraduate chemistry program is approved by the American Chemical Society. Degree and certificate programs listed in this catalog are registered by the New York State Education Department.
History

Founded in 1854 as the Brooklyn Collegiate and Polytechnic Institute, the school originally educated young men, ages 9 to 22, and was located on Livingston Street in downtown Brooklyn. In 1889, the collegiate and preparatory departments separated, and the collegiate division adopted the name Polytechnic Institute of Brooklyn. The Institute, historically referred to as “Brooklyn Poly,” moved its campus to Jay Street in 1957. In 1961, it opened a Long Island campus in Farmingdale as a graduate and research center.

In 1973, the New York University School of Engineering and Science merged into Polytechnic and the school was renamed the Polytechnic Institute of New York. The Institute began offering undergraduate programs at its Long Island campus in 1974 and, in 1975, opened the Westchester Graduate Center now located in Hawthorne.

In 1985, the New York State Board of Regents granted the institution university status and the official name became Polytechnic University.

The next 15 years saw a period of great activity as the University played a key part in the creation of MetroTech Center, a 16-acre, $1.5-billion university-corporate park, which was built around Polytechnic’s existing buildings and revitalized an area that had been in decline. Polytechnic updated its facilities, renovated its student-center building and built a new home for its library and for the Center for Advanced Technology in Telecommunications. The University also began to offer several programs in management of technology and financial engineering in the heart of Manhattan’s high-technology and financial district.

During this time, the University launched the Campaign for Polytechnic–Fulfilling the American Dream–to raise $275 million to transform itself into one of the nation’s premier technological universities. In 1998, Polytechnic received a $175 million bequest from the estates of Donald F. Othmer, a longtime Polytechnic professor, and his wife, Mildred. At that time, it was the largest single cash gift ever made to a private American university. In 1999, Polytechnic received its second largest contribution from alumnus and former student of Professor Othmer, Joseph J. Jacobs, who gave $20 million.

In 2000, Polytechnic began construction on two new buildings on the MetroTech campus: the Joseph J. and Violet J. Jacobs Building, an eight-story academic and athletic facility with classrooms and laboratories and a full gymnasium; and the 20-story, 400-bed Donald F. and Mildred Topp Othmer Residence Hall, Polytechnic’s first on-campus residence hall in Brooklyn. Both buildings opened in summer 2002.

In 2008 the University entered into a formal affiliation with New York University in recognition of the synergies between engineering, science, technology, medicine, dentistry, public policy, law and the arts. Now known as Polytechnic Institute of New York University, or NYU-Poly, the affiliation has further enhanced its capability to prepare leaders to address the challenges of the 21st century.

The Institute also has redirected its education programs, consolidating all undergraduate programs at its MetroTech campus while still offering graduate programs in Long Island and Westchester. In addition, Polytechnic delivers on-site and online programs locally and globally. Polytechnic students have the ability to study abroad at NYU’s global sites and other affiliated international universities.

Academic Programs

Polytechnic offers the Bachelor of Science degree in 15 disciplines, covering computer science, engineering, the physical sciences, mathematics and liberal arts. The degree Master of Science is offered in 34 disciplinary specialties. The degree Master of Engineering in Interdisciplinary Studies in Engineering is offered with different concentrations. The degree Doctor of Philosophy is offered in 12 disciplines.

Bachelor of Science programs prepare students for entry-level employment in various professional disciplines, and for study at an advanced level. Master of Science programs are oriented toward professional development in the subject area and can be arranged to provide the core coursework for PhD study. The PhD is the terminal research degree for those who seek careers in
industrial or academic research. The degree requires an independent research dissertation that advances the state of the art in the discipline of study. Details of academic degree requirements and detailed program descriptions are given in "Academic Programs" section of this catalog.

**Academic Departments**

The Institute faculty is grouped into academic departments for administrative purposes. Each degree program is planned and administered by the faculty of a department (or, in some cases, by faculty from several cooperating departments). Academic departments manage instructional laboratories and most research laboratories.

The "Academic Departments" section of this catalog describes the faculty and facilities of the following eleven academic departments, and identifies the degrees that each department supervises.

- Applied Physics
- Chemical and Biological Engineering
- Chemical and Biological Sciences
- Civil Engineering
- Computer Science and Engineering
- Electrical and Computer Engineering
- Financial and Risk Engineering
- Mathematics
- Mechanical and Aerospace Engineering
- Technology, Culture and Society
- Technology Management

**Research at the Polytechnic Institute of NYU**

The Polytechnic Institute of NYU offers major research programs in experimental, theoretical and computational areas, leading to significant contributions in the advancement of technology. Polytechnic faculty continue to excel as world leaders in areas that include electromagnetics and wave propagation, wireless communications, telecommunications, and distributed information systems, cybersecurity, data management, software engineering and development, polymer chemistry and engineering, mechanical engineering, biomaterials, biocatalysis, biomolecular science, engineered interfaces, plasma science and technology, sensors and sensor systems, urban technology relating to urban infrastructure and smart cities and materials science and engineering.

**Business Incubators and Accelerators**

NYU-Poly hosts two business incubators and one business accelerator. The mission of the Brooklyn Enterprise on Science and Technology (BEST) incubator, which opened in 2005 on the Brooklyn campus, is to provide an educational environment to stimulate the establishment and growth of science- and technology-based start-up and spin-off companies, expand Brooklyn’s existing industry base, attract high-technology industry to the region and create jobs and enhance economic development within Brooklyn.

In 2009, NYU-Poly and the City of New York, together with Trinity Realty, launched the Varick Street incubator. The incubator was established to combine next-generation technology with highly adaptable business models. The incubator helps emerging companies shorten the time from innovation to impact, transforming them into thriving businesses with highly valuable products and services. A number of these start-ups were founded by NYU-Poly faculty and current or former students, allowing them to bring their products from the lab to the marketplace.
Intellectual Property

The Institute’s written policy on intellectual property governs the rights, benefits and releases related to faculty and student project work. The policy is available from the Office of the Associate Provost for Research and PhD Programs.

Faculty

The heart of the Polytechnic Institute of NYU is its teaching and research faculty. There are more than 150 full-time faculty, in addition to adjunct faculty, teaching and research assistants, scientists and postdoctoral and special fellows. The Polytechnic faculty is committed to providing the best possible educational environment to stimulate and develop the mind-set of inventors, innovators and entrepreneurs in the classroom and in the laboratory, through individual guided studies and projects, advising and strong one-on-one relationships with students. The faculty originates, organizes and approves all curricula taught at the Institute and also establishes academic standards for student performance.

Alumni

The Polytechnic Institute Alumni Association (PIAA), which traces its roots to 1863, promotes the welfare of alumni and the Institute through the support and advancement of continuing education, communication, fundraising, student recruitment and retention and fellowship among alumni. The association is governed by an elected Executive Council and an International Board of Directors. Polytechnic’s more than 30,000 living alumni can be found in all 50 states and at least 64 countries.

The association, coordinating with the Office of Development & Alumni Relations, provides unique engagement opportunities that benefit alumni worldwide, including international and regional alumni gatherings and various networking and social programs organized by class year, discipline, affinity and other criteria.

Each year, the association recognizes alumni accomplishments with the Distinguished Alumni Award, Dedicated Alumni Award and Outstanding Graduate Award, which are presented during Commencement and other prestigious events.

NYU-Poly alumni are encouraged to take advantage of a number of services and benefits available through the Office of Alumni Relations. Benefits include the opportunity to audit Polytechnic courses at reduced tuition, use of the Bern Dibner Library of Science and Technology, access to online job listings through PolyLINK, the services of the Career Management Center, use of the NYU Federal Credit Union, access to the NYU Travel Adventures program, as well as discounted life, health, auto and home insurance programs.

Campuses

Brooklyn Campus

Polytechnic’s main campus is in the center of downtown Brooklyn, a vibrant residential and business community. The Brooklyn campus forms the nucleus of MetroTech Center, the largest urban university-corporate park in the United States. Developed in 1982, the 16-acre, $1-billion complex features a tree-lined commons and pedestrian walkways and is home to several technology-dependent companies that have fostered research and employment relationships with the Institute. Its academic buildings create an environment that facilitates faculty, student and staff interactions in laboratories, project space and study space, which together encourage invention, innovation and entrepreneurial activities both in and outside the classroom.

- Rogers Hall, the main academic building, is named after the late Harry S. Rogers, Polytechnic’s fifth president (1933-57). The building houses faculty and department offices, classrooms, research and teaching laboratories and a cafeteria, dining hall and student lounge.
Bern Dibner Library of Science and Technology/Center for Advanced Technology in Telecommunications (CATT) Building, opened in 1992, provides 128,000 square feet of academic space. The building houses several key elements of the Institute: a state-of-the-art library, named after the late Bern Dibner '21 Hon'59, a Polytechnic alumnus, trustee and benefactor; the New York State-funded research center, CATT; computer laboratories; and administrative offices for the Departments of Technology Management, Electrical and Computer Engineering and Computer Science and Engineering. The building also houses the Center for Faculty Innovation in Teaching and Learning.

Joseph J. and Violet J. Jacobs Building, opened in 2002, honors the late inventor, innovator and entrepreneur Dr. Jacobs ’37 ’39 ’42 Hon’86, founder of Jacobs Engineering Group, former chairman of the Polytechnic Board of Trustees, and his wife. The eight-story building, the main entrance to the Institute, contains lecture halls; laboratories for chemistry, biology and environmental engineering; and “smart” classrooms wired for multimedia technologies. The building also includes a full multipurpose gymnasium, including a fitness center and basketball court.

Donald F. and Mildred Topp Othmer Residence Hall, opened in 2002, honors the late Dr. Othmer, a long-time Polytechnic professor of chemical engineering and prolific inventor (1932–76) and his wife. The 20-story building houses more than 400 students in two-bedroom suites and two-bedroom apartments with kitchenettes and data, voice and cable television ports for every student. The building includes student lounges, study rooms, laundry facilities, health offices and storage space.

Joseph W. and Samuel Wunsch Hall is housed in a historic landmark. Anchoring the third side of the MetroTech campus, it was built in 1846. This Greek Revival building was the home of the African Wesleyan Methodist Church, the first black congregation in Brooklyn and was a stop on the Underground Railroad. It was authentically restored and reopened in 1996 through the generosity of the Wunsch family, in memory of two entrepreneurial brothers and Polytechnic alumni Joseph ’17 and Samuel Wunsch ’29. The building houses the Office of Undergraduate and Graduate Admissions.

Joseph J. Jacobs Administration Building houses the Registrar, Student Financial Services, Student Development, Career Management Center and the Office of International Students and Scholars. Other administrative offices include development and alumni relations, communications and media relations, human resources, financial operations, the president’s and provost’s offices and offices of the vice presidents.

Long Island and Westchester Graduate Centers

Polytechnic Institute of NYU’s graduate programs at its Long Island and Westchester Graduate Centers maintain the same high academic standards as NYU-Poly’s Brooklyn main campus, but are tailored to meet the needs of working professionals looking to advance their career. Students enrolled at the Westchester or Long Island Graduate Center may pursue a master’s degree or certificate program or simply take selected courses.

The Long Island Graduate Center offers master’s programs in electrical engineering, computer science, construction management, management of technology and telecommunications networks, in addition to a number of certificate programs in these areas.

The Westchester Graduate Center offers part-time master’s degree programs in management, computer science, cyber security, electrical engineering, computer engineering, construction management and telecommunication networks. The Westchester Graduate Center is also home to Polytechnic’s MS in Information Systems Engineering, offered in an executive-degree program format.

Manhattan Location

Located in the heart of New York City’s high-technology and financial district, Polytechnic’s 55 Broad Street site allows the Finance and Risk Engineering and the Technology Management Departments to serve the area’s burgeoning population of technology managers, financial experts, entrepreneurs and other professionals. The Finance and Risk Engineering Department offers certificate programs in Risk Management and Financial Technology Management.

Master’s degrees offered at this site through the Department of Technology Management include Accelerated Management of Technology and Management of Technology, along with an Information Management Master’s degree program taught in an
executive-degree format. The 55 Broad Street site also houses the Department’s Institute for Technology and Enterprise (ITE). ITE presents seminars and roundtables on various subjects related to modern technology management and supports research and advanced curriculum development for graduate and executive master’s programs dealing with technology and innovation management and entrepreneurship.

Bern Dibner Library of Science and Technology

The Bern Dibner Library of Science and Technology serves as Polytechnic Institute’s information hub, specializing in applied science and engineering. Wireless networks allow users to access the library’s electronic services both from within the library and from other campus locations.

The library, through its website (http://library.poly.edu), offers electronic access 24 hours a day, seven days a week, to an ever growing collection of electronic resources shared with other NYU libraries. Users can view full text of books and journals and imaged course materials and chat with librarians in real time. Subject-related web guides created by professional staff facilitate further study and research.

Polytechnic users also have onsite access to the vast resources offered by other NYU libraries. These in-house services are augmented by participation in regional and national cooperatives. The Institute library is an active member of the Academic Libraries of Brooklyn (seven participating libraries), the New York Metropolitan Reference and Research Library Agency (currently 250 member institutions) and the Long Island Library Resource Council (over 200 participating libraries). The library is also a member of Nylink, which offers access to New York State resources, as well as the Online Computer Library Center, which maintains an international catalog compiled and maintained by 71,000 libraries in 112 countries.

On-site skilled information professionals provide support through the following products and services:

- One-on-one assistance in the retrieval and use of online resources including the catalog and electronic databases;
- Tutorials on effective research methods offered in conjunction with various academic departments. Workshops are open to all Polytechnic students, faculty and staff and provide training in the use of information services and software;
- In-class instruction in effective use of information resources for freshmen and upperclassmen, offered at instructor’s request;
- An in-house print collection of more than 130,000 books and journals, providing support for undergraduate and graduate programs in engineering, the sciences and technology management;
- A document delivery service, which obtains, on request, books, journal articles and reports not available in Polytechnic’s in-house collections or online.

Central Computing Facilities

The mission of Polytechnic’s Information Systems department is to provide state-of-the-art computing, networking and communications technologies to students, faculty and staff in support of the mission of the institution. These technologies are specifically designed to be aligned with NYU-Poly’s course offerings in Computer Science and Engineering and in support of the Institute’s role in educating and training knowledge workers of the future.

Polytechnic provides electronic access through wired and wireless networks, which allow students to roam seamlessly around campus while staying connected to the Internet and all educational support and information resources. Additionally, students living in the Othmer Residence Hall have voice, data and cable connections in their rooms and throughout the building.

Polytechnic requires every undergraduate student to have a laptop computer as mobile technology and timely, pervasive access to information is integrated into the curriculum and throughout the campus. The combination of student laptops, a ubiquitous network, online information and e-learning support tools promotes “congregate learning” and links the NYU-Poly community into the larger electronic teaching and learning community.
Since many of the learning and information support systems are Web enabled, students can access these resources off campus as easily as on campus. Students can view their schedule of classes and communicate with their instructors directly from the self-service pages.

Through the online Student Center, students can keep track of their academic and financial status. Through an institute-wide course management system, students are able to examine their course information. A Learning Management System (LMS) is used to facilitate and share learning materials between students and faculty. Faculty members use the LMS as a preferred method to enhance their courses by uploading syllabi and related documents and to communicate with students. Students are encouraged to interact with their instructors using electronic means, allowing students to have access to guidance, support, mentoring and advisement anytime, anywhere.

Polytechnic also provides access to central computing laboratories in support of various discipline-specific fields. These labs consist of a collection of desktops and workstations. These resources access a wide range of server operating systems and applications, giving students exposure to a highly heterogeneous technology environment and reflecting the most widely used tools available in the engineering and technology professions.

The Future

As Polytechnic moves forward in the 21st century it will build on its past, remain true to its mission to educate intellectually curious students who are eager to change the world through invention, innovation and entrepreneurship, and prepare graduates to become leaders in a global arena that demands scientific, technological and entrepreneurial acuity.

Polytechnic will continue to innovatively extend the benefits of science, engineering, management and liberal studies to critical real-world opportunities and challenges, and our affiliation with New York University will continue, especially those linked to urban systems, health and wellness, and the global information economy.

Charles Fabrikant, *Executive Chairman, Seacor Holdings, Inc.*

Richard Fishbein, *Partner Emeritus, Cortec Group, Inc.*
Admissions, Financial Aid, Tuition and Fees

Admissions

The course of studies at Polytechnic is academically rigorous and intellectually challenging; therefore, admission to Polytechnic is highly selective. Candidates for admission to graduate programs are evaluated by the department to which they apply. Students seeking admission to the undergraduate programs are evaluated by the professional staff of the Office of Undergraduate Admissions.

Undergraduate Application Process

Application materials and information about undergraduate admissions may be obtained by contacting the Office of Undergraduate Admissions or on-line:

Office of Undergraduate Admissions
Polytechnic Institute of New York University
Undergraduate applicants should complete the application for admission and forward it to the Office of Undergraduate Admissions with either the nonrefundable application fee or a fee-waiver request form. Applicants must request that their secondary school and/or college forward official copies of all transcripts to the Polytechnic Office of Undergraduate Admissions. Additionally, applicants must submit an essay and two letters of recommendation. All freshman applicants and transfer applicants with fewer than 30 college credits from an accredited institution are required to submit official copies of the Scholastic Assessment Test (SAT) or the American College Testing Program (ACT). Transfer applicants with fewer than 30 college credits from an accredited institution are required to submit official copies of their secondary school transcripts and SAT or ACT scores.

Polytechnic’s Office of Undergraduate Admissions reviews applications once all required documents are received and notifies students of decisions in writing. Applicants are encouraged to apply early. Preference for admission and scholarship is given to applicants who submit all documents according to the following timetable:

**Full-time Undergraduate Study**

Regular Decision:

Early Decision:
November 7, 2011 for Fall 2012;
November 5, 2012 for Fall 2013.

Priority Decision:
February 14, 2011 for Fall 2011;
February 3, 2012 for Fall 2012;
February 3, 2013 for Fall 2013.

May 1 (all years)—deposit for freshman admitted students due.

**Full-time Transfer Undergraduate Study**

January 14, 2011 for Spring 2011 semester;

January 13, 2012 for Spring 2012 semester;

January 11, 2013 for Spring 2013 semester;

August 12, 2011 for Fall 2011 semester;

August 10, 2012 for Fall 2012 semester;

August 9, 2013 for Fall 2013 semester.

The preceding timetable does not apply to international applicants. Because of the extra time required to process applications from abroad, consideration will not be given to applications received after December 1 for the spring semester, or after July 15 for the fall semester. All official records, with notarized translations, must also be received by these dates. (See “Admission as an International Student” for additional information.)

If accepted for admission, applicants should submit an enrollment deposit of $300 to reserve a place in the entering class. This deposit is applied to tuition and fees for the first semester and is non-refundable. Deposits to reserve a place in the entering
The preferred secondary school course of study is:

<table>
<thead>
<tr>
<th>Course</th>
<th>Years</th>
</tr>
</thead>
<tbody>
<tr>
<td>English</td>
<td>4</td>
</tr>
<tr>
<td>Science</td>
<td>4</td>
</tr>
<tr>
<td>Mathematics</td>
<td>4</td>
</tr>
</tbody>
</table>

*(Chemistry is required and Physics is strongly recommended.)*

This course of study is only a directive, not an absolute requirement. The primary concern of the members of the Committee on Admissions is to determine an applicant’s potential for success at Polytechnic.

**Interviews and Campus Tours**

Prospective students are strongly encouraged to visit the campus and interview with an admissions counselor. In some circumstances, an interview is required. Arrangements can be made by calling the Office of Undergraduate Admissions at 800-POLYTECH or (718) 637-5955. If advance arrangements are made, prospective students may be able to combine their campus visit with an interview with an admission counselor.

**Freshman Admission with Advanced Standing**

Freshmen may receive advanced standing with college credit at Polytechnic by scoring exceptionally well on the Advanced Placement Examinations given by the College Board. Specific requirements for administering college credit—for the Advanced
Placement and the International Baccalaureate Exam, for the French Baccalaureate or for the General Certificate Exam A levels, etc.—vary from department to department.

**Admission under the Higher Education Opportunity Program**

The Higher Education Opportunity Program (HEOP) provides educational opportunity to economically and educationally disadvantaged students of New York state. Economic eligibility is based on New York State guidelines, which consider family size, family members who are students and family income.

Freshmen entering HEOP are required to take six weeks of work during the summer before beginning the freshman year to make up prerequisites and courses in which limitation is shown. Freshmen are admitted to this program in the fall only.

Transfer students may enter HEOP provided there is space available. Only students coming from similar programs approved by the HEOP central office are eligible to transfer into HEOP.

For further information, contact the HEOP office at (718) 260-3370.

**Admission as an International Student**

International students must meet four basic criteria for admission to Polytechnic and be in receipt of a valid I-20 or DS-2019:

- Academic credentials (grades, certiﬁcates, degrees) must be assessed as suitable for entry to the specific Polytechnic program. Transcripts must be submitted with official translations. One source for official translations is World Education Services at www.wes.org.
- Submission of SAT or ACT scores is required for freshmen. This requirement may be waived in some circumstances.
- The Test of English as a Foreign Language (TOEFL) or IELTS is required of all students whose native language is not English. This requirement may be waived, in some circumstances.
- Admitted international students applying for an F-1 or J-1 student visa are required to submit a signed and completed Polytechnic Declaration and Certification of Finances (Affidavit of Support) accompanied by a bank statement signed by a bank official to receive an I-20 or DS-2019.
- Students holding F-1 or J-1 visas must enroll as full-time students.

If transfer credit is desired, candidates must include catalog or syllabus descriptions of courses completed. English translation must be provided where necessary. An official transfer-credit evaluation will be done, as soon as possible, after the student arrives at Polytechnic and meets with a member of the admissions staff and a departmental adviser.

**Admission as a Transfer Student**

Polytechnic welcomes transfer students from accredited colleges and universities, provided they have maintained a strong academic record. Students with less than 30 college credits need to submit official high school transcripts and ofﬁcial SAT or ACT scores; however, under certain circumstances the submission of high school transcript(s) and SAT/ACT scores may be waived by Admissions. Students who have completed 30 or more college credits need only submit ofﬁcial college transcripts. All transfer applicants must also submit an essay and two letters of recommendation.

Once accepted, transfer students’ credits will be evaluated by the academic department to which they are applying for evaluation to determine which are transferrable. Students are required to submit their college catalog, and/or syllabi, describing courses under consideration for transfer credit.

Transfer credits will be officially evaluated before the end of the first semester in which the transfer student is enrolled at Polytechnic by the academic departments. Transfer credit is awarded on the basis of current standards and curriculum. Therefore, it is possible that credits Polytechnic had previously awarded for courses taken at other universities may no longer be granted at
this time. Transfer credit will not be considered for any course with less than a C grade. Any student who completes a course in residence at Polytechnic for which transfer credit has already been granted will automatically forfeit the transfer credit for that course.

In certain instances, course requirements may be waived for students who demonstrate sufficient knowledge of specific course content through either oral or written examinations given by the department. When course requirements are waived, the student will not receive credit for the course, but must substitute a more advanced course to satisfy the degree requirement.

The grades for transfer courses are not included in computing the Polytechnic grade-point average. New transfer students may be admitted on a part-time or full-time basis and are required to take a mathematics diagnostic examination and may be required to complete a writing placement exam.

Admission as a Part-Time Student

Students seeking a bachelor’s degree may enroll on a part-time basis (11 credits or less). Part-time undergraduate students should be aware that it is not possible to complete a bachelor’s degree program by attending only evening courses.

Regulations concerning subject requirements and admissions procedures are given in the section “Admission as a Freshman.”

Following notification of acceptance, students are told when to contact the adviser of their major department. In some cases, this contact may be accomplished during registration.

Special and Visiting Status

An individual requesting permission to register for one or two courses in a specific semester is assigned special-admission status. A special (nondegree) student application must be submitted to the Office of Undergraduate Admissions. Included in this status are individuals who want to take courses for professional advancement or personal development, or individuals from other colleges wishing to transfer credit back to their home institution but who do not want to earn a degree. A maximum of 6 credits or two courses may be taken in one semester and no more than a total of 9 credits or three courses may be taken. Exceptions can be made to this policy through the office of the dean of academic affairs. This policy does not apply to currently enrolled high school students or students in an approved Poly exchange program. A special student application must be filed each semester the individual remains in this status. Permission to take courses as a special student does not imply admission to a degree program.

Courses taken on a nondegree basis are not automatically applied to a degree program. Some courses, however, may be applied to a degree program with the approval of a departmental adviser. Students may enroll in up to 9 credits as a special student before formal admission is required.

Students should work with their home institution to insure that the courses they participate in at NYU-Poly will transfer back to the school where they will receive their degree. Students who wish to matriculate at the Institute and receive a degree from NYU-Poly should apply as transfer students and should not apply for visiting student status.

Visiting Student Application Process

To be eligible for consideration to participate in the NYU-Poly visiting student program for the fall and/or spring semesters, applicants must meet the following criteria:

- Currently achieving a cumulative GPA of a 3.0 or better. Students who do not meet this minimum academic requirement will not be considered.
- Not currently on academic, disciplinary, and/or medical leave or probation at their current institution. Students may take a personal leave for the semester(s) they are studying at NYU if such a leave is required by their home institution to maintain matriculation.
- It is also recommended that all applicants should be fully prepared for Calculus prior to enrolling as a visiting student at NYU-Poly.
Application Checklist

When completing and returning the application, applicants should read the checklist below to ensure that they have included the appropriate items and information (this list can be found on the application itself):

- Completed Application
- Official Transcript
- Application Fee of $50.00, payable to “Polytechnic Institute of NYU”

Conditional Status

An undergraduate degree applicant who is required to demonstrate additional ability to pursue the program applied for is assigned conditional status. Conditions may include taking introductory level courses, limited courses per semester, or attainment of a specified grade-point average.

Status

Within the full-time and part-time classifications of undergraduate admissions are three status groups: regular, conditional and special/visiting student. A change in status from conditional to regular should be applied for when the conditions of admission are satisfied. A special or visiting student must file an application for undergraduate admissions with the Office of Undergraduate Admissions.

Readmission

Polytechnic students who have not been in attendance for one semester or more and have not been granted an approved leave of absence (see “Leave of Absence”) must apply for readmission through the Office of Undergraduate Admissions. The student’s application for readmission will be sent to the student’s academic department for evaluation. The academic department in consultation with the Office of Academic Affairs and Dean of Undergraduate Academics determine whether the student is eligible to continue his/her studies at NYU-Poly.

Students who have been academically disqualified must apply for readmission through the Office of Undergraduate Admissions. Students applying for readmission are expected to state their reasons for leaving Polytechnic and explain why they want to return. They must also submit with their application for readmission official transcripts of college-level courses taken during this absence from Polytechnic.

Graduate Admissions

To be eligible for admission as a graduate student, an applicant must first hold a bachelor’s degree from an institution acceptable to Polytechnic. The bachelor’s degree program must comprise at least four years of college-level work. In case the bachelor’s degree program is less than four years, additional college-level course work should be taken to satisfy the requirement of four years of college-level preparation. Attention is given to listings by the Accreditation Board for Engineering and Technology, the American Chemical Society, the Computer Science Accreditation Board and various regional accrediting associations. An applicant applying to a graduate program in an area of study different from the undergraduate field in which a bachelor’s degree or its international equivalent was earned may be required to take additional courses for which credit toward degree requirements may not be given (see “Conditional Status”).

Graduate admission information can be obtained from the Office of Graduate Admissions, Polytechnic Institute of NYU, Six MetroTech Center, Brooklyn NY 11201, (718) 260-3182, or online, at www.poly.edu/admissions/graduate.
Admission Procedures

In addition to the application form and fee, an applicant must have official transcripts from all previously attended undergraduate and graduate institutions sent directly to the Office of Graduate Admissions in an officially sealed envelope. An application should be supported by letters of recommendation from persons qualified to comment on the applicant’s aptitude for graduate study and research. A Statement of Purpose from the applicant is also required. Applicants should outline reasons for undertaking graduate studies and future plans. A resume detailing the applicant’s professional and academic background is also required. Official standardized admission test results are required as per the examination section.

All applicants are requested to send the entire application, including transcripts, letters of recommendation and all other supporting documents, in one package to facilitate processing and to avoid delays due to missing documents. Action on an application will be taken as soon as possible after all supporting documents are received.

Applicants applying before completion of their undergraduate studies must submit the original proof of completion of Bachelor’s degree to Graduate Admissions’ Office before registering as a graduate student at Polytechnic.

Application Deadlines

The deadlines for sending in completed applications for fall semester are:
March 30: (1) all applicants applying for scholarships, assistantships and financial awards and (2) all international applicants.
July 1: all other applicants.

For spring semester the deadlines are:
November 1: (1) all applicants applying for scholarships, assistantships and financial awards and (2) all international applicants.
December 1: all other applicants.

Examinations

The Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) is required for admission to some graduate programs and are recommended for all others. However, all international applicants must submit scores for the GRE (or GMAT if applicable) to be considered for admission. GRE or GMAT scores are also required for those applying for merit-based scholarships, fellowships and assistantships. Consult the departmental section of this catalog for specific requirements about each degree program.

International Applicants

An international student must complete an application for admission by March 30 (fall admission) or November 1 (spring admission) to be reviewed for the term requested. Late applications or an incomplete file will delay review and perhaps entrance by at least one term.

Additionally, international students are required to demonstrate English proficiency. For detailed information, see “English Requirement for International Students.” All international students must submit a notarized Certificate of Finance accompanied by a bank statement showing the ability to meet financial obligations for the course of study.

English Requirement for International Students

To be granted regular admission to a graduate degree program, international students normally are required to demonstrate proficiency in English by obtaining a score of at least 80 on the internet-based Test of English as a Foreign Language (TOEFL) or 6 in the International English Language Testing System (IELTS).
This requirement may be waived for international students who:

- have earned a degree from an institution in a country where English is the official language;
- have successfully completed an undergraduate program in the United States in which English was the official or major language of instruction;
- can demonstrate a level of English proficiency deemed equivalent to a TOEFL score of 80 (internet-based test: IBT) through submission of evidence acceptable to the Institute.

International students who obtain a TOEFL (or equivalent) score between 57 and 80IBT may be admitted to a graduate degree program on the condition that they successfully complete an English program at the Institute. Upon successful completion of the approved English program, students are not required to submit a new TOEFL score.

**Polytechnic Institute of NYU’s English Program**

In certain cases, international graduate students may be required to attend an intensive English program at Polytechnic upon enrollment. Students may attend this program while taking a reduced graduate academic load of one to two courses a semester. Grades or credits obtained in courses related to this English program will not be included in the computation of the GPA or toward successful degree completion.

**Status**

Within the full-time and part-time classifications of graduate admission are three status groups: regular, conditional and special. A change in status from conditional to regular should be applied for when the conditions of admission are satisfied. A special student must file an application for graduate admission with the Office of Graduate Admissions.

**Regular Status**

A graduate degree or certificate applicant who is adequately prepared to begin the program applied for is assigned regular admission status upon the recommendation of the major department’s faculty.

**Conditional Status**

Conditional status is assigned to an applicant for a graduate degree or certificate who is required to demonstrate additional ability to pursue the program for which he or she applied. Conditions may include taking introductory level or undergraduate courses, proof of degree completion taking intensive English courses, or attaining a specified grade-point average.

**Special Admission Status**

Special admission status is assigned to an individual requesting permission to register for one or two courses in a specific semester. A special (nondegree) student application must be submitted to the Office of Graduate Admissions. Included in this status are individuals seeking to take courses for professional advancement or personal development, but who do not want to earn a degree; and part-time degree applicants with incomplete admission files. A maximum of 6 credits or two courses may be taken in one semester and no more than 9 credits or three courses may be applied to a Polytechnic degree program. If such courses are applied toward a degree, they are considered as having been taken “in residence” at Polytechnic. A special student application must be filed each semester the individual remains in this status.

Permission to take courses as a special student does not imply admission to a degree program. Special students must hold a bachelor’s degree from an institution acceptable to Polytechnic. Proof of degree is required.

**Readmission**

Students who last attended Polytechnic within one year before the semester in which they seek to be readmitted and who have filed a formal leave of absence do not need formal readmission and are automatically permitted to register. Students who have not
attended within the past year and did not file a formal leave of absence must apply for readmission; an application is available from the Office of Graduate Admissions.

Students who want to interrupt their studies must request a leave of absence for a specified time, usually not exceeding one year. Such requests, when approved by the Office of Graduate Academics (and the Office of International Students and Scholars for international students), constitute assurance of readmission to the degree program from which the leave was taken. Students must apply for readmission when absence exceeds the approved leave of absence.

Financial Aid

Undergraduate Financial Aid

NYU-Poly administers a broad range of scholarship and financial aid programs to assist students in pursuing their educational goals. To meet the total cost of education, students may draw upon such available sources as student income, family income, Institute grants and federal and state funding.

All financial aid is limited to the need of the student as determined by the federal government’s need analysis calculation. Students receiving financial assistance from NYU-Poly must notify the Office of Financial Aid of all scholarships, loans and other forms of educational assistance from sources other than those directly administered by NYU-Poly.

The following are three basic types of financial aid:

1. **Scholarships and grants**: funds awarded to students based on academic ability and financial need that do not require repayment.
2. **Loans**: specific sums awarded to students with repayment conditions. Education loans generally have low-interest rates with extended repayment terms.
3. **Employment**: part-time and summer jobs either on- or off-campus.

Approximately 90% of NYU-Poly’s undergraduate students receive aid, including scholarships, grants, work-study jobs and student loans.

**Applying for Financial Aid**

Incoming freshmen should file a Free Application for Federal Student Aid (FAFSA) during January. (Later applications will be considered on a rolling basis as funds are available.)

Transfer students should file a FAFSA by May 1.

**Renewing Financial Aid**

All currently enrolled students must reapply for financial aid annually by completing the Free Application for Federal Student Aid (FAFSA) before March 1st for the upcoming academic year to be considered for all types of aid. Students filling after March 15th will be considered late and may not qualify for all types of aid. Students are liable for any late fees assessed by Student Accounts due to late FAFSA filing.

The FAFSA is available for completion online at [www.fafsa.ed.gov](http://www.fafsa.ed.gov).

Before completing the FAFSA students should be sure to have a valid PIN number. This will serve as an electronic signature. To apply for a PIN number, visit [www.pin.ed.gov](http://www.pin.ed.gov).

Parents of dependent students are required to sign the FAFSA so they should also apply for a federal PIN number at www.pin.ed.gov. Dependent students who complete the FAFSA without a parent signature will be rejected by the processor. Financial aid cannot be awarded until the FAFSA is completed and approved by the processor.
Students should make sure that all required sections of the FAFSA are competed before submitting:

- Signed by student (and parent for dependent students);
- Enter the code for Polytechnic Institute of New York University – 002796;
- Include housing status – on campus, commuting or off campus;
- Include state residency information. New York Residents should utilize NYS TAP link to apply for NY State aid (www.tapweb.org).

**Federal Campus-Based Programs**

Students eligible for a federal campus-based program must (1) show need, (2) be enrolled at least half time (the equivalent of at least six credits per semester) and (3) be either a U.S. citizen or an eligible non-citizen.

To apply for any of these programs, students must have been accepted to NYU-Poly and have filed a FAFSA. The Office of Financial Aid determines the awards.

To continue to receive an award, students must make satisfactory academic progress, provide the Office of Financial Aid with all requested documents and report any changes in their financial situation annually.

All campus-based programs are contingent on annual awarding by the federal government. Renewal of awards may be affected by overall government funding to the school.

**Federal Supplemental Education Opportunity Grant (SEOG)**

The Federal Supplemental Education Opportunity Grant (SEOG) is awarded to undergraduates with exceptional financial need. Qualified applicants receive between $500 and $3,000 a year. Students must file the FAFSA each year by March 15\(^{th}\) to be reviewed for renewal. Renewal of awards is based on financial need and government funding.

**Federal Perkins Loans (formerly National Defense Student Loans, NDSL)**

Federal Perkins Loans are 5% interest loans awarded through the Office of Financial Aid. They are included as part of the financial aid package and range from $500 to $2,000 per year. Total undergraduate Perkins Loans may not exceed $20,000.

The repayment period and interest for Perkins Loans do not begin until nine months after a student graduates, withdrawals or drops to less than half-time enrollment.

**Federal Work-Study Program**

The Federal Work-Study Program provides part-time jobs for undergraduate students to help meet college-related expenses. The Office of Financial Aid determines eligibility. The Career Management Center arranges work schedules.

At NYU-Poly, the average federal work-study award is $1,500 per academic year. Jobs are arranged on-campus, along with community service opportunities. Most assignments average 10 to 15 hours a week, and the work schedule is adjusted to the student’s and the employer’s needs. The hourly rate varies depending on the position. Students are paid bi-weekly.

**Federal and State Sponsored Programs**

**Federal Pell Grants**

The Federal Pell Grant is a need-based program. Awards are determined by the U.S. Department of Education according to an eligibility index and by the level of appropriations available. Grants are for study leading to a first bachelor’s degree.
Eligible students must (1) be U.S. citizens or permanent residents, (2) make satisfactory academic progress and (3) meet federal need requirements.

Students apply for the Federal Pell Grant by completing a FAFSA. Students applying for financial aid at NYU-Poly (including Federal Direct Loans) are required to apply for a Federal Pell Grant.

**Tuition Assistance Program (TAP)**

The Tuition Assistance Program (TAP) attempts to minimize the difference in cost normally found between New York’s public and independent colleges so that students may make their choices based on program characteristics alone and not the difference in cost.

The amount of TAP award depends on tuition charges and NYS net taxable income. Income is adjusted to reflect other family members enrolled full-time in post-secondary study.

Eligible students must (1) be New York State residents and U.S. citizens or permanent residents, (2) enroll full-time at an approved New York State post-secondary institution, (3) meet income requirements established by New York State, (4) complete a TAP application by May 1st for the current academic year and (5) not be in default on a federal or state student loan.

To apply for a TAP award, students should complete an Express TAP Application (ETA) at [www.hesc.com](http://www.hesc.com).

If NYU-Poly’s name does not appear on the TAP certificate, use the NYSHEC website at www.hesc.com to update the college code to 0610 which is the NYU-Poly code.

To continue to receive TAP benefits, students must demonstrate satisfactory academic progress. All TAP recipients must achieve a 2.0 cumulative GPA after the completion of three full-time semesters.

In addition, students must fulfill the following academic requirements:

1. Complete a minimum number of credits by the end of each term of full-time study;
2. Maintain a minimum cumulative grade-point-average. The table below provides the correspondence between TAP payment points and academic progress.

**Academic Progress for TAP Purposes**

TAP Waiver: Students who do not meet the criteria as indicated on Requirements 1 and 2 may be eligible for a one-time TAP waiver. For appeal and consideration by the TAP Waiver Committee, students must file a TAP Waiver Form with the TAP certifying Officer in the Student Financial Services Office.
Aid for Part-Time Study (APTS)

The Aid for Part-Time Study (APTS) Program provides state grants to less than full-time students.

Eligible students must (1) be working toward an undergraduate degree as a part-time student, (2) be in good academic standing, (3) be a resident of New York State, (4) be either a U.S. citizen, permanent resident or refugee, (5) not have exhausted TAP or other New York State student financial aid eligibility for full-time study and (6) qualify under the New York State–mandated income requirements.

To apply, students should file an application with Student Financial Services no later than the second week of classes for the current semester. Students must apply each semester.

Vietnam Veterans Tuition Awards (VVTA) Supplement

In 1984, the New York State Legislature established the Vietnam Veterans Tuition Award program to provide tuition assistance for full-time or part-time undergraduate student for veterans who are residents of the state, who served in Indochina between February 28, 1961 and May 17, 1975, and who were discharged under honorable conditions or general discharge.

Since 1984, the program has been expanded to include veterans who served in the Persian Gulf on or after August 2, 1990 and in Afghanistan on or after September 11, 2001, and to provide awards for graduate as well as undergraduate study.

In 2008, the legislature further amended the law to also include “other eligible combat veterans.” This group includes individuals who are New York State residents, who served in the armed forces of the United States in hostilities that occurred after February 28, 1961, as evident by their receipt of an Armed Forces Expeditionary Medal, Navy Expeditionary Medal, or Marine Corps Expeditionary Medal and who were discharged under honorable conditions, as noted above.

For full-time study, veterans are eligible for an award equal to the amount of undergraduate tuition for New York State residents charged by the State University of New York, or actual tuition charged, whichever is less.

For part-time study, awards are prorated by credit hour. Part-time study for Veterans Tuition Awards is defined as at least three, but fewer than 12, semester hours at degree-granting institutions.

Awards are available for up to four years of undergraduate study, or five years for enrollment in an approved five year program and up to three years of graduate study.

Higher Education Opportunity Program (HEOP)

HEOP is sponsored by New York State and Polytechnic for entering freshmen who meet special academic and economic criteria. All inquiries are administered directly through the Office of HEOP. Consult the “Admissions” section and "Special Programs" for more information.

Institute Scholarships and Grants

Polytechnic awards scholarships to freshmen with strong academic backgrounds for full-time study (12 credit hours a semester). Scholarships are offered through Polytechnic’s PROMISE Fund, which administers more than 100 different programs. Students apply to the Office of Undergraduate Admissions through their application for admission. Awards may cover up to full tuition. Scholars must maintain a 2.5 or 3.0 cumulative GPA (depending on the award). Scholarships are not added to external scholarships nor coupled with multiple NYU-Poly scholarships.

Polytechnic awards the following scholarships:

Promise Scholarships
These scholarships are awarded in varying amounts, based on scholastic achievement. No award may be greater than the amount of tuition less any other aid for which students may be eligible. Scholars must maintain a 3.0 or 2.5 cumulative GPA. No separate application is required.

**NYU-Poly Grants**

These grants are awarded to students who demonstrate high financial need. Students apply directly to the Institute’s Office of Financial Aid by completing a Free Application for Federal Student Aid (FAFSA).

**Merit-Based Scholarships and Awards**

**Honors Program Scholarship**

Students accepted to the Honors Program will receive a scholarship awarded in variable amounts. Please see “Special Programs” for information on the Honors Program and its requirements.

**Promise Fund**

**Corporate and Individually Sponsored Scholarships**

NYU-Poly scholarships are established through generous sponsors. Students are notified if their particular scholarship is corporate or individually donated.

The following is a list of current scholarships at Polytechnic:

- Benjamin Adler Memorial Scholarship
- Sidney G. Albert Scholarship
- Alden Challenge Scholarship
- Anthony Alonzo Scholarship
- Alumni Scholarship
- Joseph M. Amendolara Scholarship
- Donald J. Amoruso Scholarship
- George Bachman Scholarship
- Paul C. Bauerele Memorial Scholarship
- Beltran Family Endowed Scholarship

Frank and Iris Young President’s Scholarship
Edward H. Zucker Scholarship

Other Opportunities

Veterans Administration (VA) Educational Benefits

Eligible Veterans should apply through the Office of the Registrar. A summary of Veterans’ benefits is available in the Office of the Registrar.

Students requesting VA benefits should notify the Office of the Registrar each semester after completing registration. Students must report interrupted attendance or termination of study. Details of NYU-Poly’s requirements are given to all applicants. Please direct questions about veterans’ benefits or paperwork to the Office of the Registrar either in person or by telephone.

Cooperative Education Program (CO-OP)

Co-op is an alternative way to finance education by combining outside employment with college attendance in alternate semesters.

Contact the Career Management Center and Cooperative Education for more information.

Grant Aid to Non-New York State Residents

Some state-aid programs frequently require that awarded funds be used within the state, while other programs sometimes allow funds to be used out of state. Residents of Pennsylvania, Rhode Island, Vermont or Washington, D.C., should contact the following agencies for more financial aid information:

Pennsylvania Higher Education Assistance Agency
Education Building
Harrisburg, PA 17126

Office of Scholarships
Rhode Island Department of Education
199 Promenade Street
Providence, RI 02908

Vermont Student Assistance Corporation
156 College Street
Burlington, VT 05401

Washington, D.C. Grant Program
Educational Assistance Office
1329 E. Street NW
Room 1050
Washington, DC 20004
Loan Programs

William B. Form Federal Direct Subsidized Loan

The Federal Direct Loan program allows students to borrow money to help meet the costs of college. Students borrow this money and on to go into repayment as long as they meet the program’s academic requirements or until six months after they graduate or withdraw from school.

Eligible students must be (1) U.S citizen or permanent resident, (2) enroll for at least six credits per semester and matriculate, (3) make satisfactory academic progress, (4) demonstrate financial need as determined by the Free Application for Federal Aid (FAFSA).

Academic year loan limits are $3,500 for freshmen, $4,500 for sophomores and $5,500 for juniors and seniors. Interest is subsidized by the government and does not accrue as long as the student meets programs requirements.

To apply, students must complete the FAFSA each year. First time Direct Loan borrowers must also complete the Master Promissory Note and Entrance Counseling session (online).

When student borrowers graduate, withdraw from school or enroll less than half-time, they will be required to complete the Exit Counseling session (online). Borrowers must begin repaying the loan six months after graduating or withdrawing from school. Direct Lending offers many different repayment options. Deferments and forgiveness options are also available. Borrowers should contact Direct Lending regarding any repayment, deferment or forgiveness options.

Repayment of part or of the entire loan may be made in advance at any time without penalty.

William B. Form Federal Direct Unsubsidized Loan

The Federal Direct Unsubsidized loan is open to students who do not qualify for a subsidized loan (listed above). The same terms, conditions, annual borrowing limits apply. The only exception is that the borrower is responsible for interest that accrues while enrolled in school and during the six month grace period. Unpaid interest will be capitalized upon repayment after grace period.

In addition Independent students and dependent students, whose parents are unable to secure a PLUS loan, may apply for an additional $4000 annually at the freshmen and sophomore levels or $5000 annually at the junior and senior level.

Affective as of July 1, 2008, all students are eligible to borrow an additional $2000 under the unsubsidized program regardless of dependency.

Federal Direct Parent Loan (PLUS)

Parents may borrow up to the full cost of attendance for each financially dependent student. A Free Application for Federal Student Aid (FAFSA) is required. Standard repayment begins within 60 days of receiving the final disbursement for the loan period. Deferment options are available so that repayment can be postponed until student graduates, withdraws or drops below half-time enrollment. Interest will accrue while in deferment. Parents must contact Direct Lending if they wish to defer.

Other Resources

Students should contact the Office of Financial Aid for information concerning financial aid programs available, the companies that sponsor them and the necessary application procedures.
Payment Plans

Monthly Payment Plan

A monthly payment plan spreads annual tuition charges over 10 months, beginning in July and ending in April. The monthly payment plan is interest-free, regardless of the balance, with a one-time enrollment fee accessed at the beginning of the plan. Monthly payment plans are also available on a semester basis.

Deferred-Payment Plan

Students who submit written proof of eligibility for tuition reimbursement from their employers will be allowed to defer payment until the end of the semester. Eligibility is contingent upon the signing of a promissory note, with a one-time enrollment fee accessed at the beginning of each semester. A valid credit card is required and will be billed if the company reimbursement is not received by the required deadline after the term.

Third-Party Payment

Students receiving sponsorship from government agencies, employers or other organizations must provide the Institute with proof of coverage and permission to bill a third party. Students are required to pay or arrange for payment of any uncovered portion of the bill. Sponsorships are arranged between the student and a third party; students are responsible for NYU-Poly debt if the third party fails to pay.

Other Opportunities

Several scholarship programs, usually directed by local and civic organizations, are not based on need. High school guidance offices and the Internet are the best sources of information. Also, parents’ places of employment sometimes sponsor programs for employees’ children. These employer benefits are often full- or half-time tuition and sometimes based on merit or need.

Important Financial Aid Policies

- To be eligible for financial aid, students must enroll at least half-time per semester. However, all TAP grants and NYU-Poly scholarships and grants require full-time enrollment to qualify.
- Financial aid applicants (including Federal Direct Loan applicants) must apply for a Pell Grant and, in the case of New York residents, for TAP. NYU-Poly scholarships and grants, combined with Pell Grant and TAP awards, may not exceed tuition.
- Prospective students should not wait until their admission to apply for financial aid. These are concurrent processes. Applicants should make every effort to apply for admission and financial aid by the preferred application dates. Once students are admitted, they are reviewed for financial aid.
- Financial aid is renewable annually, based on the student’s reapplication, continued demonstration of financial need where applicable and fulfillment of other requirements stipulated by the awards.
- Standards of achievement for scholarship maintenance are established each semester. Students who fall below the established criteria may appeal for a one-time grace period to restore their GPA. If they are unsuccessful, the scholarship is revoked. It will be reinstated when the student is again successful. Scholarships cannot be received retroactively. Scholarships can be renewed for eight semesters and are not available for summer terms.
- Since financial aid and scholarship funds administered by NYU-Poly are limited, students should be aware that it is unwise to enroll at NYU-Poly without financial aid support. They should not assume that financial aid will be available from NYU-Poly at a later date. Given the fixed amount of resources, NYU-Poly deems it unethical to withdraw support from students who have based attendance at NYU-Poly on the financial aid awarded them in order to release funds to
assist new applicants. Funds from financial aid programs not administered by NYU-Poly, such as Pell Grants, TAP and the Direct Loan Program, are available to eligible students.

- Grants of Title IV Aid (Pell Grants, Supplemental Educational Opportunity Grant, College Work Study, Perkins Loan and Stafford Loan) are contingent upon provision of the following documents:
  1. Properly signed Financial Aid Acceptance
  2. Copies of students’ and/or parents’ IRS Form 1040 or 1040A/EZ, if requested
  3. Proof of citizenship or permanent residency status, if requested
  4. Selective Service Registration for males - born after 1960
  5. Other requested documents

### Satisfactory Academic Progress

Students must meet the satisfactory academic progress requirements to qualify for all federal and institutional financial aid. Satisfactory academic progress has two-fold criteria. Students must have a certain cumulative grade point average (GPA) and must pass a certain percentage of the total credits they have attempted. Satisfactory academic progress requirements are listed online at www.poly.edu/financial-aid/sap.

A student who is not making satisfactory academic progress may request a one-time waiver of these requirements. Waivers are granted only in cases where the student has demonstrated that the academic progress criteria were not met due to extraordinary circumstances occurring in the student’s life, generally beyond his/her control.

### Impact of Withdrawal on Financial Aid

Students who receive Title IV federal aid and withdraw from all courses prior to completing 60% of the term will have their aid pro-rated according to the Federal Return to Title Four (R2T4) calculation.

In accordance with federal regulations, students who withdraw from NYU-Poly and have credited to their tuition account Federal Title IV financial assistance (Direct Loans, Pell, SEOG, or Perkins Loans) will be subject to the Federal Refund Policy on the possible return of funds awarded.

The amount of the semester’s unearned Federal Aid must be returned to its source. The amounts to be returned are based on the federal R2T4 calculation. When returning Title IV funds federally mandated priority listing will be used:

1. Federal Direct Unsubsidized Loan
2. Federal Direct Subsidized Loan
3. Perkins Loan
4. Federal Direct Parent Loan
5. Pell Grant
6. ACG
7. SMART Grant

If a student has an account balance resulting from these adjustments, the student is responsible for payment.

### Graduate Financial Aid

#### Graduate Fellowships

Fellowships are available for study leading to master’s and PhD degrees in engineering and science. They are awarded through the department in which applicants are enrolled, or to which they have applied. Entering students apply for a fellowship by completing the question on the Application for Graduate Admission form. Continuing students should consult their academic department.
Research Fellowships

Students receiving research fellowships are assigned to research that fulfills the thesis requirement of the graduate curriculum in which they matriculate. They receive a living allowance and remitted tuition. Fellows must be registered as full-time students taking each semester nine or more credits, possibly including their thesis. Typically, funding comes from grants and contracts that faculty have secured from government agencies or industry. In these cases, the student’s research is also reported to the funding agency or company as part of the grant or contract requirements.

Institute Scholars

Institute scholars participate half time throughout the academic year in assignments from the department in which they matriculate. They receive a living allowance and up to 12 credits of tuition scholarship. Scholars must be registered as full-time students taking nine or more credits per semester, which may include their thesis. Students working toward a PhD must also complete the thesis requirement of the department and Institute.

Special Fellowships

Individual departments administer special fellowships sponsored by industry and foundations, each with its own conditions, for students in the department. Contact departmental offices for information on special fellowships.

Reduced Tuition Program for High School and Two-Year Community College Teachers

A reduced tuition program is offered for full-time high school and two-year community college teachers to encourage their pursuit of graduate studies at NYU-Poly. The program provides a 50% tuition reduction for graduate courses taken at any campus. Degree candidates and special students are eligible.

Prospective students must submit to the Office of Graduate Admissions written verification of employment as a full-time high school or college teacher, signed by the department head and an officer of the applicant’s institution. Substitute, part-time, adjunct or temporary appointments are not valid. Only those holding full-time, permanent teaching appointments in a public or private secondary school or accredited two-year community college located in the New York metropolitan area are eligible to participate in this program.

This policy is not retroactive, and students may not participate in more than one tuition-reduction or remission program. This policy is subject to annual review.

William D. Form Federal Direct Subsidized Loan

Graduate Students may apply for a Federal Direct Subsidized Loan of up to $8,500 per academic year. Eligible students must (1) be U.S. Citizens or permanent residents, (2) enroll at least half-time per semester, (3) be matriculated, (4) make satisfactory academic progress and (5) demonstrate financial need. All applicants must complete a Free Application for Federal Student Aid (FAFSA) to determine need. All interest and principle payments are deferred as long as the student is enrolled for at least six credits per semester. Repayment begins six months after graduating, withdrawal or dropping to less than half time. Contact the Student Financial Services Office regarding interest rates and application process.

William D. Form Federal Direct Unsubsidized Loan
The Federal Direct Unsubsidized loan is open to students who do not qualify for the above subsidized loan. In addition, all graduate students may borrow up to an additional $12,000 annually. (Total amount of up to $20,500 may be borrowed per academic year.) The same terms and conditions as above apply with the exception that the borrower is responsible for interest that accrues while enrolled in school and during the six month grace period. Contact Student Financial Services regarding interest rates and application process.

**Graduate Federal Direct Plus Loan**

Graduate students whose full cost of attendance is not covered by the William D. Ford Direct Loans may apply for the Graduate Direct PLUS loan. Students may apply for up to the full cost of attendance minus any financial aid. A FAFSA is required and the Direct Loans must be utilized before applying for the PLUS loan. The loan is not guaranteed and is subject to credit approval. Repayment can be deferred until graduation or withdrawal. Contact the Student Financial Services Office regarding interest rates and application process.

**Tuition and Fees**

Up-to-date and detailed information on tuition and fees as well as announcements of cost changes can be obtained from the Office of Student Financial Services before the start of each semester and on the office’s website www.poly.edu/life/student-resources/financial. Tuition rates are set by the NYU-Poly Board of Trustees. Because of economic conditions and inflationary costs, the Institute reserves the right to change tuition charges and fees when it is deemed necessary. NYU-Poly is mindful of the economic challenges of attending a first-rate private school such as NYU-Poly; accordingly, the Institute will continue to make every effort to keep cost increases to the lowest possible level consistent with maintaining educational quality.

**Undergraduate Tuition:**

<table>
<thead>
<tr>
<th></th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full-time (12-20 credits*) per semester</td>
<td>$17,552</td>

</table>
Part-time (3 credits), per semester $204

**Executive Format MS Programs:**

Management of Technology*, per semester $12,500

Technology and Information Systems Management*, per semester $12,500

Information Systems Engineering, per semester $10,882

**NYU-ePoly (Online Learning):**

ePoly Tuition, per credit $1,194
ePoly Institute Fee, per semester $220

*All credits in excess of 9 are charged at the per credit rate.

**Other Fees:**

Alumni Audit Fee, per course $615

Graduate Application Fee:

- Hardcopy $75
- Online $75

Undergraduate Application Fee $50

Credit by Examination Fee, per credit (undergraduate only) $80

Diploma Replacement Fee $50

Doctoral Dissertation Microfilm Fee $75

**Monthly Late Payment Fee:**

- Balances under $5,000 $50
- Balances of $5,000 or more $100

Late Registration Fee $150

*Charged to all students who register on or after the first day of classes.*

Maintenance of Studies (Graduate students only) $198

*Students are not required to pay tuition but pay the Graduate Institute fee for 3 credits*

Undergraduate Orientation Fee, one-time fee $150
TMS enrollment fee $90
Tuition deferment fee $150
Tuition deposit $300
Tuition deposit - HEOP Students $200

**Housing:**
Dorm Deposit $400
International Dorm Deposit $1,000

**Othmer Residence:**
Suite, per semester $3,975
Meal plan (Suite), additional per semester $1,065
Apartment, per semester $5,500
Meal-plan (Apartment), additional per semester $800

**Clark Residence:**
Single, per semester $7,925
Double, per semester $6,500
Large Double, per semester $6,780
Lofted Triple, per semester $4,780
Triple, per semester $4,890

‡NYU-Poly reserves the right to change tuition charges and fees when it is deemed necessary.

**Payment of Tuition and Fees**

Each semester, tuition and fee payments are due in full from all students at the time of registration. NYU-Poly reserves the right to de-register students from classes and deny access to campus buildings if payment or payment arrangements are not made at the time of registration. Payment in full refers to various methods, used alone or in combination, including cash, check, money order, financial aid, grants and loans or tuition arrangements authorized by the Office of Student Financial Services. Evidence of financial aid must be presented to the Office of Student Financial Services in order to use the anticipated aid to satisfy tuition costs.

Tuition must be paid in full, including disbursement of loans and all other aid, to receive permission to register for the next semester. Students participating in a payment plan or the graduate deferment plan must pay in full according to the rules of the plan. NYU-Poly reserves the right to withhold transcripts, diplomas and other services, including registration and participation in graduation activities, from students whose financial obligations have not been fully met.
E-Billing

Polytechnic Institute of New York University no longer sends paper tuition statements. All registered students must log into CASHNet via https://commerce.cashnet.com/polypay in order to view their electronic tuition statements.

Tuition Management Systems (TMS) Payment Plan

The Institute provides monthly, by-semester and yearly payment options. The monthly tuition payment plan is available through Tuition Management Systems, an independent agency. Specific information about these plans is outlined on our website www.poly.edu/life/student-resources/financial.

Semester Payment Plan (TMS)

Tuition bills are posted on a semester basis. After deducting all forms of scholarships, grants and loans for the semester, students must pay the remaining tuition balance in full at the beginning of each term. Students who use semester-payment plan do not incur finance charges.

Monthly Payment Plan (TMS)

A monthly payment plan spreads annual tuition charges over 10 months, beginning in July and ending in April. The monthly payment plan is interest-free, regardless of the balance amount, with a one-time enrollment fee assessed annually at the beginning of the plan. Monthly payment plans are also available on a semester basis. The enrollment fee is the same as for the Annual Plan.

Graduate Tuition Deferment

Students who submit written proof of eligibility for tuition reimbursement from their employers will be allowed to defer payment until the end of the semester. Eligibility is contingent upon the signing of a promissory note, with a deferment fee assessed at the beginning of each semester.

Third Party Payment

Students receiving sponsorship from government agencies, employers or other organizations must provide the Institute with proof of coverage and permission to bill a third party. Students are required to pay or arrange for payment of any uncovered portion of the bill. Sponsorships are arranged between the student and a third party; students are responsible for Institute debt if the third party does not make payment. Third parties are billed at the beginning of the semester, and payment is due upon receipt of the bill.

Drop/Withdrawal Policy

Tuition Liability

Upon selecting and reserving courses, students are responsible for all tuition and fees associated with that registration. Students must officially drop or withdraw from classes to remove or reduce tuition liability. Liability will not be voided automatically for nonattendance or non-payment.
Refund/Tuition Liability

This section pertains to all students, regardless of the payment method or the manner of covering tuition costs. Once registered, students must officially drop or withdraw from classes to be eligible for applicable tuition refund or to avoid responsibility for payment of charges already assessed. The Institute Fee is nonrefundable as of the first day of the semester. This applies regardless of whether or not classes have been attended. Recipients of financial aid who incur a tuition liability after registration because of a reduction in the aid or a withdrawal from class will personally be responsible for payment of that liability to the Institute. All tuition liability includes collection fees.

Refund Schedule

The refund schedule applies only during the first four weeks of the semester. It is based on calendar dates, not on the number of class sessions held or attended. The official withdrawal date is the date the withdrawal form (available in the Registrar’s Office) is received in the Office of the Registrar, not the last date of class attendance.

Whenever a student drops or withdraws from a course or from all courses, tuition charges are adjusted according to the above Refund/Tuition Liability schedule, provided that (1) the withdrawal notice is filed within the refund period, (2) it is submitted in writing to the Office of the Registrar and (3) the withdrawal lowers the student’s program to fewer than 12 credits.

Impact of Withdrawal on Financial Aid

In summer 2000, Polytechnic adopted a new Federal Refund Policy to comply with new federal regulations (section 668.22) of the Higher Education Amendments of 1998. In accordance with federal regulations, students who withdraw from the Institute and have credited to their tuition account Federal Title IV financial assistance (Federal Stafford Loan, Federal Parent Loan for Undergraduate Students, Federal SEOG, Federal Perkins Loan or Federal Pell Grant) will be subject to the Federal Refund Policy on the possible return of Title IV funds awarded. In addition, the amount of refundable institutional charges will be determined according to the Institute policy.

The amount of the semester’s unearned Federal Title IV aid must be returned to its source. The amounts to be returned to the Federal Programs vary according to the type of program, the total amount to be returned, and the government’s determination of the order in which aid is returned to the programs. If a student has an account balance resulting from these adjustments, the student is responsible for payment.

When returning Federal Title IV aid, federally mandated priority listing will be used:

1. Federal Direct Unsubsidized Student Loan Program
2. Federal Direct Subsidized Student Loan Program
3. Perkins Loan
4. Federal Parent Loan for Undergraduate Student (PLUS)
5. Federal Pell Grant
6. Supplemental Educational Opportunity Grant (SEOG)
7. ACG
8. SMART

The calculation for impact of withdrawal on financial aid is the same for all students. The determination of tuition refund is based on length of attendance.

Drop/Withdraw: Prior to and including the first seven (7) days of the semester – 0% Liability

Drop/Withdraw: 1st Week – 10% Liability

Drop/Withdraw: 2nd Week – 25% Liability
Drop/Withdraw: 3rd Week – 50% Liability
Drop/Withdraw: 4th Week – 75% Liability
Drop/Withdraw: 5th Week and beyond – 100% Liability

Refund Appeals

Appeals for an exception to the refund schedule must be submitted in writing to the Office of Student Accounts, along with documentation supporting the request. Students are expected to be aware of the Institute refund policy and withdrawal procedures; lack of knowledge is insufficient reason for making or granting an appeal.

Communication Policy

In our on-going campaign to be environmentally aware by “going green” and to increase the safety, efficiency, and speed of our communication with students, NYU-Poly has instituted a communication policy in which NYU-Poly will no longer use paper communication with students.

All NYU-Poly students have a Polytechnic Institute of NYU e-mail account and, through the PeopleSoft Blackboard integration, access to MyPoly for institutional information concerning the classes for which they are registered and organizational
information and services. Because of this robust electronic access, NYU-Poly faculty and administration will contact students with important information and notices electronically only through the various communication technologies and environments provided by the Institute.

To ensure that students both receive and are responsive to important notices from all departments and offices at NYU-Poly, students need to observe the following policy:

- The NYU-Poly e-mail account is a student’s official point of contact. Students are expected to directly access this account at least once each school day.
- Students must be aware of notices posted on MyPoly. It is the student’s responsibility to check this portal during the drop/add period of registration and regularly during the term in order to verify the accuracy of his/her schedule and to read any official institute notices. Schedules should be verified by students at least once during the first two weeks of the term and once after mid-semester. The Academic Calendar that delineates the different registration periods is also available on MyPoly. Students should be familiar with this calendar and follow it accordingly.
- Students are required to be aware of course-related information available on their course environment on Blackboard, such as course syllabi, resources, calendar, assignment expectations, special announcements, grades etc.

**Institute Compliance and Other Guidelines**

**Polytechnic Institute of NYU Code of Conduct**

The Polytechnic Institute of NYU Code of Conduct, edited and administered by the Department of Student Development, notifies the NYU-Poly community of prohibited behavior and outlines the procedures to be followed in the event of a breach of the Code. This code is dedicated to protecting and promoting the academic enterprise and is indispensable in maintaining an academic environment conducive to teaching, learning and the development of individuals.

The complete Institute Code of Conduct is available to students and all members of the NYU-Poly community. For further information contact the Department of Student Development at (718) 260-3800 or visit Room 158 in the Jacobs Building.

**Institute Policy on Academic Dishonesty**

All members of the community are expected to exhibit honesty, integrity and fairness in their academic work and interaction with others. The entire community shares the responsibility to secure and respect general conditions conducive to academic honesty. Individual academic departments may develop and publicize supplemental guidelines, in conformity with Institute policies, for academic competence and honesty appropriate to their fields of study. Academic dishonesty is treated as a moral and intellectual offense against the academic community and is not tolerated. Students are responsible for reading and familiarizing themselves with the Institute Policy on Academic Dishonesty. All members of the community are responsible for familiarizing themselves with the Institute’ s academic procedures, for preventing acts of academic dishonesty and for taking steps to prevent such acts from recurring.

Every student is expected to be familiar with, and abide by, the Institute Policy on Academic Dishonesty.

**The Polytechnic Institute of NYU Anti-Harassment Policy for Employees and Students**
The Polytechnic Institute of NYU is committed to a work and learning environment in which all individuals are treated with respect and dignity. Each individual has the right to work and learn in a professional atmosphere that promotes equal employment and academic opportunities and prohibits discriminatory practices, including harassment. Therefore, NYU-Poly expects that all relationships among persons at the Institute (in the workplace and in the classroom) will be business-like and free of bias, prejudice and harassment.

The complete Institute Anti-Harassment Policy for Employees and Students is available online.

**Family Educational Rights and Privacy Act (FERPA)**

The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) is a federal law that protects the privacy of student-education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education.

The procedures used by Polytechnic Institute of NYU to comply with the Family Educational Rights and Privacy Act (FERPA), also known as the Buckley Amendment are detailed below. Under FERPA, NYU-Poly students have certain rights regarding their education records. A student is defined as any individual who is or has been in attendance at NYU-Poly and regarding whom NYU-Poly maintains education records.

These rights include:

- **The right to inspect and review the student’s education records within 45 days of the day the Institute receives a written request for access.** Students should submit the request to the Office of the Registrar that identifies the record to be inspected. The Institute official will arrange access and notify the student about when and where records may be inspected. If the records are not maintained by the Institute official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed. The Institute has the right to prohibit students from reviewing and inspecting education records that include the financial records of their parents, as well as those records consisting of confidential letters and recommendation about their admission to the Institute, their application for employment or their receipt of an honor or honorary recognition.

- **The right to request the amendment of education records that the student believes is inaccurate, misleading or in violation of his/her right to privacy.** Students may ask the Institute to amend a record that they believe is inaccurate. They should write the Institute official responsible for the record, clearly identify the part of the record they want changed and specify why it is inaccurate. If the Institute is in agreement with the student’s request to amend his/her record, the record in question will be amended accordingly and the student will be informed of the amendment in writing. If the Institute decides not to amend the record as requested by the student, the Institute will notify the student of the decision and advise the student of his/her right to a hearing on the request for amendment. Additional information about the hearing procedures will be provided to the student when notified of the right to a hearing.

- **The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes the Institute to disclosure without the student’s consent.** Consent to disclosures of personally identifiable information must be done by the student in a written request to the Registrar’s Office.

- **The right to file a complaint with the U.S. Department of Education concerning alleged failures by the Institute to comply with the requirements of FERPA.**

- **Release of Information:** Polytechnic must have written permission from the student to release any personally identifiable information from his/her education records. In addition, the Institute may disclose personally identifiable information, without consent, to the following parties or under the following conditions (34 CFR § 99.31):
  - **School officials with legitimate educational interest in such information to fulfill their professional responsibility.** (A school official is a person employed by the Institute in an administrative, supervisory, academic or research, or support staff position [including law enforcement unit personnel and health staff]; a person or company with whom the Institute has contracted [such as an attorney, auditor or collection agent]; a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.)
Other schools to which a student seeks enrollment
Where disclosure is to certain federal, state and local authorities
Where disclosure is in connection with financial aid for which the student has applied or received.
Where disclosure is in connection with studies being conducted for or on behalf of the Institute.
Where disclosure is made to accrediting organizations
To comply with a judicial order or lawful subpoena
Appropriate officials in cases of health and safety emergencies
Information designated as “directory information”
Where the information disclosed is the final results of a disciplinary hearing, and the disclosure is made to an alleged victim of a crime of violence or non-forcible sex offense.
To parents or legal guardians regarding a violation of any federal, state, local law or Institute policy governing the use or possession of alcohol or a controlled substance if a student is under the age of 21 and if the Institute determines that the student has committed such violation.

FERPA permits the release of directory information to third parties outside Polytechnic without prior written consent, provided that students have received the opportunity to withhold such disclosure. Polytechnic reserves the right to disclose the following directory information related to a student without consent:

- Student’s name
- Class year
- Major field of study, as well as similar information (e.g., title of master's or doctoral dissertation, distinguished academic performance)
- Participation in recognized activities and sports
- Dates of attendance and enrollment status (full-time, half-time or part-time) at NYU-Poly
- Degrees, honors

For more information on student rights regarding their education records, release of information, parental disclosure and directory information, please see the complete Institute Policy Regarding FERPA.

For questions about FERPA and an individual's rights as a student at Polytechnic Institute of NYU, please contact the Office of the Registrar.

Information Technology and Electronic Resources
Acceptable Use Policy

Information technology systems and electron resources are provided with the understanding that the members of the Polytechnic community will use them with a sense of compliance/adherence to all applicable laws and regulations, mutual respect, cooperation and collaboration. These resources are finite, and must be shared with an understanding that with any established interconnection of electronic resources, the effect of one individual can have a dramatic effect on others within the network. As such, the use of the Polytechnic Institute of NYU network and electronic resources is a revocable privilege. All constituents will benefit if all users of the NYU-Poly electronic systems avoid any activities which cause problems for other users of the same systems. NYU-Poly reserves the right to monitor, limit and restrict electronic messages, network/systems traffic and the public or private information stored on computers owned, maintained, or managed by NYU-Poly. Computers not owned, maintained, or managed by NYU-Poly staff that abuse campus services may be denied access to campus resources. Email/voice mail, web pages, electronic data and digital content are subject to archiving, monitoring, or review, and/or disclosure by others than the intended recipient.

To that end, Polytechnic Institute of NYU expects that all individuals including, but not limited to, Institution students, faculty, and staff, using its electronic resources will abide by the Acceptable Use Policy.
Accommodations for Students with Disabilities

Polytechnic Institute of NYU supports Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act. The Institute makes every effort to provide full and barrier-free program accessibility. The Institute also does not discriminate in its admissions practices and bases acceptance primarily on academic records.

NYU-Poly is committed to assisting students with disabilities in developing the personal and academic skills necessary to participate fully in student programs. To that end, the Institute provides services to students with disabilities based on individual needs. The Institute is particularly interested in helping these students to become effective self-advocates.

Accommodations for students with disabilities do not include the waiving of academic course requirements.

Although not every student with a disability requires accommodations, registering with the Department of Student Development is advised. More information regarding accommodations is available here.

Alcohol and Drugs

NYU-Poly, in compliance with New York State law, prohibits the unlawful possession, manufacture, use or distribution of alcohol and illicit drugs on its property or as part of any of its activities, unless otherwise noted. Violations of this policy will result in disciplinary actions under the Institute Code of Conduct. Furthermore, NYU-Poly will not protect those who violate these laws, nor will it interfere with law-enforcement agencies that pursue violators of these laws.

All student organizations or groups wishing to hold events where alcohol is served must obtain permission from the Dean of Student Affairs or designee, who will be solely responsible for making that decision and applying conditions and obligations for the event.

Health and Accident Insurance

NYU-Poly is concerned about student health and seeks to protect students against the high cost of medical care. Many students and their parents are unable to afford the added expense of an unexpected injury or sickness. To ensure all students are covered, the Institute requires that all students with 9 or more credits, or those who are considered full-time students, carry health insurance. If students do not have their own coverage, the Institute offers a plan to provide necessary health insurance. Part-time students also may enroll in accident and sickness coverage. To ensure that part-time students are covered at the start of the semester, they must complete the online enrollment information and mail the confirmation statement to the Institute’s insurance broker. The broker will process the application and issue insurance cards.

Even students with private insurance plans may want to consider supplementing those plans, as many policies exclude or limit coverage. However, domestic students with comparable coverage may elect to waive the Institute-provided insurance plan by the designated deadlines. To do so, they need to provide information on current coverage to the insurance broker to ensure coverage is comparable.

Domestic students may waive out of the plan if they have comparable private insurance; NYU-Poly’s carrier will review student waivers (applying for a waiver does not automatically waive someone out of the plan). The insurance carrier will contact students about any questions regarding a waiver. If students do not waive by the designated deadlines, they will be responsible for the fee.

All international students are required to be enrolled in the Institute-sponsored plan as part of their enrollment at NYU-Poly. They must complete insurance enrollment by the designated deadlines.

In addition, all full-time students (graduate and undergraduate) are covered by accident insurance.
**Immunization**

New York State law requires students to show proof of immunity to measles, mumps and rubella. NYU-Poly complies fully with the provisions of this law. The law applies to all students (graduate and undergraduate) born on or after January 1, 1957.

Immunization status is checked as part of registration for new students. New first-year, transfer and graduate students who fail to comply (1) are barred from attending class (and are not entitled to any tuition refund); (2) do not receive grades; and (3) are denied further registration.

For forms or more information on this requirement, or to submit the required proof, please contact the Office of Undergraduate Admissions or the Graduate Center.

**Guidelines on Student Observances**

The faculty of the Polytechnic Institute of NYU has adopted the following guidelines on student religious observances, as recommended by the Commission on Independent Colleges and Universities. The intent of these guidelines is to encourage independent colleges and universities to reasonably accommodate individual students’ religious obligations and practices without penalty.

- Students will not be expelled or refused admission to the Institute if they are unable to participate in any examination, study or work requirement because of their religious obligations and practices.
- Students who are absent from school because of their religious obligations and practices will be given an opportunity to make up any examination, study or work requirement that was missed because of such absence.
- Students must notify their instructors and Student Development in writing, no later than the 15th day after the first day of the semester, that they will be absent from a class scheduled on a day that conflicts with their religious obligations and practices.
- In effecting these provisions, NYU-Poly’ s administration and faculty agree to exercise the fullest measure of good faith, and agree that students who follow these guidelines on religious observances will suffer no adverse or prejudicial effects.

**Student Identification**

All students are required to carry and maintain at all times photo-identification cards issued by the Office of Facilities Management. ID cards must be presented and/or surrendered to any official of the Institute upon request.

The Institute uses a student ID number to identify a student’s records (grades, accounts, etc.) from the time of the admission application process through the completion of his or her degree. This number is computer generated and used solely by NYU-Poly.

**Statistics on Enrollment and the Student Body**

**Enrollment 2010-2011**

**Fall 2010**
Undergraduate | Graduate | Total
| FT | PT | TOT | FT | PT | TOT |
Brooklyn | 1695 | 73 | 1768 | 1503 | 854 | 2357 | 4125 |
Long Island | — | — | — | 16 | 119 | 135 | 135 |
Wetchester | — | — | — | 11 | 83 | 94 | 94 |
Broad Street | — | — | — | 52 | 26 | 78 | 78 |
Total | 1695 | 73 | 1768 | 1582 | 1082 | 2664 | 4432 |

**Student Body**

**Fall 2010**

| Undergraduate | Graduate |
| Men | Women | Men | Women |
Brooklyn | 1424 | 344 | 1709 | 648 |
Long Island | — | — | 116 | 19 |
Wetchester | — | — | 81 | 13 |
Broad Street | — | — | 55 | 23 |
Total | 1424 | 344 | 1961 | 703 |

**Student Retention**

As required by the New York State Education Department Higher Education Data System, Polytechnic conducts a yearly cohort survival analysis. This study collects data for a group or cohort of first-time, full-time freshmen (students who never attended college before) who enter Polytechnic. The data measures retention patterns and indicates the time needed to complete undergraduate degrees at Polytechnic. For a cohort study of first-time full-time students who entered Polytechnic as freshmen in fall 2004, 38 percent received their Bachelor of Science degree within four years, 52 percent graduated in five years and 55 percent completed their degree within six years.

**Persistence and Completion Information**

First-time full-time undergraduate students continuing at the Institute, 2009-2010 to 2010-2011:

Academic Department and Degree Information

Polytechnic Institute of New York University

General Studies

Undergraduate Certificate

General Studies Program

The General Studies (GS) Program provides proactive support for students, allowing them an opportunity to matriculate and successfully obtain a science-, engineering, humanities, and management-based education. To ensure student success, the General Studies Program provides a broad variety of services that begin with a mandatory summer program before the start of freshman year and continue throughout the academic year with mandatory weekly tutoring and advisement sessions. Once admitted into NYU-Poly, students must participate successfully in the program for one year before they are allowed to officially declare their major. Advanced Placement (AP) and transfer credits may not be used toward the completion of GS Program requirements.

For further information, visit the GS website, or call (718) 260-3882.

Admission and Application Procedures

Admission to the General Studies Program is by invitation only. Selected freshmen are invited to submit an application and may be interviewed by an admissions counselor to determine if their goals correspond with program objectives and services. Accepted students who plan to attend the program must take a math-, beginner level physics-, and writing-skills assessment tests before the summer program starts.

Academic Support Services

GS students have an array of services to help them adjust to the rigorous NYU-Poly curriculum. Services include, but are not limited to, the following:

- A six-week on-campus or online summer program before the start of their freshman year.
  - On-campus students take a computer skills for engineers class and pre-college math, physics and writing courses. Otherwise, students take an online Math course. The Admissions Office decides whether the student’s summer experience will be on-campus or online; regardless of format, student participation in one or the other is required for admission to NYU-Poly in the fall.
- College survival skills course.
- Individualized tutoring and group review sessions.
- Individual and group advisement sessions.
Advisement

At weekly advisement meetings students discuss questions and concerns about the academic curriculum and general college adjustment issues. Individual advisement sessions are a more personal continuation of the group meetings. Students meet with a General Studies staff member weekly to discuss a broad range of topics, including academic, financial and personal concerns.

Financial Aid

General Studies students’ financial-aid packages are based on the information entered on the Free Application for Federal Student Aid (FAFSA) form. Students are urged to complete the FAFSA forms as early as possible to get the best financial aid package.

Department of Applied Physics

Head: Lorcan M. Folan

Mission Statement

The NYU-Poly Department of Applied Physics is committed to providing high-quality introductory-, intermediate- and advanced-level physics courses as services to the Institute’s engineering and science departments. The major programs train new generations of physicists who apply the tools of physics to contemporary problems to benefit all. The department, collaborating closely with other departments, employs physics knowledge and techniques to enable engineering research and education, and serve as a catalyst for research in other scientific fields.

Physics: The Fundamental Science

Physics is the science devoted to the study and understanding of nature. It traces its history back to Aristotle and derives its name from the Greek words for nature and natural. Physics is often said to be the most fundamental science which deals with the constituents, properties and evolution of the entire universe, on all length and time scales. Other branches of science focus on smaller domains, but physics provides the foundation for all of them.

Contact Information

Polytechnic Institute of NYU
Six MetroTech Center

Degrees Offered
The department offers Physics, B.S. and Physics, M.S. degrees, and a dual major degree in Mathematics and Physics, administered in cooperation with the Department of Mathematics. Students may elect to take a minor in Physics or elect a Nuclear Sciences and Engineering Concentration or a Nuclear Sciences and Engineering Minor, administered in cooperation with the Department of Mechanical Engineering.

Faculty

Professors

Stephen Arnold, University and Thomas Potts Professor
PhD, City University of New York
*Microparticle Photophysics, Whispering Gallery Mode Biosensing, Organic Molecular Crystals*

Kurt H. Becker, Professor Dr. rer. net., Universität des Saarlandes, Saarbrücken, Germany
*Atomic, Molecular, and Chemical Physics; Plasma Physics; Development of New Experimental Techniques and Processes*

Hong-Liang Cui, Professor
PhD, Stevens Institute of Technology
*Applied physics/optics*

Erich E. Kunhardt, Professor
PhD, Polytechnic Institute of New York
*Low temperature plasma physics, device physics*

Edward L. Wolf, Professor
PhD, Cornell University
*Experimental condensed matter physics superconductivity; nanophysics and nanotechnology; electron tunneling spectroscopy*

Associate Professor

Lorcan M. Folan, Associate Professor, Department Head
PhD, Polytechnic University
*Spectroscopic characterization of aerosol particles; optical properties of micro-cavities; energy transfer in condensed matter; electron capture beta decay*

Industry Professors

Victor Y. Barinov, Industry Associate Professor
PhD, Academy of Science of the Ukraine

Valery A. Sheverev, Industry Professor, Director of Physics Laboratory Program
PhD, Leningrad State University

Lecturers
Physics is the basic science of the natural world, the study of matter, energy and motion. Worthy of study for its own beauty, physics is also the foundation of engineering and the natural sciences.

Goals and Objectives

The mission of the Physics Program is to provide Polytechnic undergraduates with a strong foundation in physics, suited to the discipline, and to offer advanced opportunities for formal study in physics.

Minor

Nuclear Sciences and Engineering Concentration
Concentration and Minor in Nuclear Science and Engineering

This interdisciplinary program aims to produce engineering and science graduates who understand clearly the benefits and risks of nuclear technologies and who will seriously consider employment in nuclear industry and government.

Students may obtain an Interdisciplinary Concentration or Minor in Nuclear Science and Engineering, in conjunction with a traditional degree. Those majors include civil, chemical and biological, computer, electrical, financial and risk, or mechanical engineering, or the physical or computational sciences (all are majors currently offered by Polytechnic).

Concentration in Nuclear Science and Engineering

The concentration consists of three courses taken typically during the junior and senior years. Students can use the available technical and free electives in their curriculum to take these courses.

**PH 3103 Fundamentals of Applied Nuclear Physics**

*3 Credits* This course surveys the fundamentals of nuclear physics with application to nuclear engineering. Topics include an introduction to quantum mechanics, nuclear forces and nuclear structure, nuclear stability and reactions, natural and induced radioactivity.

*Prerequisite(s):* CM 1004, PH 2033 and MA 2132.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 3503 Introduction to Radiation Physics and Dosimetry**

*Prerequisite(s):* PH 3103 or PH 2344.

Also listed under: ME 4383.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 4373 Introduction to Nuclear Engineering**

*3 Credits* This is intended to be a required course for the Nuclear Engineering Concentration. It covers three basic areas: (a) reactor kinetics, as it pertains to neutron reaction associated with fissile materials, (b) power reactor systems, i.e. the various types of nuclear reactors in use and their basic operating principles, and (c) design principles for reactors and reactor systems.

*Prerequisite(s):* PH 3103.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Nuclear Sciences and Engineering Minor
Concentration and Minor in Nuclear Science and Engineering

This interdisciplinary program aims to produce engineering and science graduates who understand clearly the benefits and risks of nuclear technologies and who will seriously consider employment in nuclear industry and government.

Students may obtain an Interdisciplinary Concentration or Minor in Nuclear Science and Engineering, in conjunction with a traditional degree. Those majors include civil, chemical and biological, computer, electrical, financial and risk, or mechanical engineering, or the physical or computational sciences (all are majors currently offered by Polytechnic).

Minor in Nuclear Science and Engineering

The core of the minor is the three course concentration.

**PH 3103 Fundamentals of Applied Nuclear Physics**

*3 Credits* This course surveys the fundamentals of nuclear physics with application to nuclear engineering. Topics include an introduction to quantum mechanics, nuclear forces and nuclear structure, nuclear stability and reactions, natural and induced radioactivity.

*Prerequisite(s):* CM 1004, PH 2033 and MA 2132.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**PH 3503 Introduction to Radiation Physics and Dosimetry**

*Prerequisite(s):* PH 3103 or PH 2344.

*Also listed under: ME 4383.*

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**ME 4373 Introduction to Nuclear Engineering**

*3 Credits* This is intended to be a required course for the Nuclear Engineering Concentration. It covers three basic areas: (a) reactor kinetics, as it pertains to neutron reaction associated with fissile materials, (b) power reactor systems, i.e. the various types of nuclear reactors in use and their basic operating principles, and (c) design principles for reactors and reactor systems.

*Prerequisite(s):* PH 3103.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**Electives**

The balance of the 15 credits required for the minor shall be selected from the approved elective courses listed below.

**Approved elective courses include:**
EE 2613 Fundamentals of Electric Power Engineering for Non EE Students

Prerequisite(s): MA 1024, MA 1124, and PH 1013. Corequisite(s): PH 2023.
Note: ABET competencies a, d, h i, j.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FIN 3593 Probabilistic Risk Assessment

3 Credits This undergraduate course in probabilistic risk assessment (PRA) introduces students to a deep, comprehensive methodology for risk evaluation associated with complex engineered technological designs. Four fundamental questions are addressed: what can go wrong, what are the indications of potential failure, what is the potential magnitude of the failure, and with what probability will failure occur. We will also explore human reliability analysis and common-cause-failure analysis. This course can be applied towards the requirements for NYU-Poly’s minor in Nuclear Science and Engineering but not towards the minor in Finance.

Prerequisite(s): MA 2054 or MA 2212 or MA 3012.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 4863 Corrosion and Non-Destructive Evaluation of Materials

3 Credits Mechanisms of corrosion and means to prevent corrosion; uniform corrosion, galvanic corrosion, pitting, leaching and corrosion in fresh water; protective coatings, cathodic protection and changes in design and environment to prevent corrosion. Non-destructive testing of materials; Penetrants, Magnetic, Radiography, Eddy Current and Ultrasonic techniques. Materials selection, failure analysis and prevention and design strategies for inspectability.

Prerequisite(s): PH 2023 Electricity, Magnetism and Fluids

PS 2723 Human Factors in Engineering Design

3 Credits The purpose of this course is to familiarize students with basic concepts, research findings and theories related to the way in which human characteristics, capabilities and limitations, including physiology and psychology, affect system design and performance. Students will develop a basic understanding of methods for studying and assessing human behavior and for analyzing human performance. It will introduce aspects of system, interface, organizational design and physical setting as they influence operators and performance.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H
Note: Satisfies a humanities and social sciences elective.
Note:

An overall GPA of 2.0 is required in the courses to earn the minor.

Physics Minor

The undergraduate physics minor consists of a set of four or more physics courses, totaling at least 15 credits. The courses should be at intermediate or advanced level and have the introductory physics sequence, PH 1013, PH 2021, PH 2023, PH 2031 and PH 2033, as prerequisites. An overall GPA of 2.0 in these courses is required to earn the minor. For transfer students, at least 8 credits must be earned at Polytechnic with a 2.0 GPA.

Bachelors

Mathematics and Physics, B.S.

Dual Major in Physics and Mathematics

The core of the program is 30 credits of required Physics courses and 29 credits of required Math courses. Students pursuing the dual major must also take an additional 10 credits of Physics electives and 9 credits of Math electives. 15 credits are reserved for free electives and independent study courses, of which 6 to 8 credits are reserved for a senior project. The remaining credits are used to satisfy other Institute and state requirements. The proposed curriculum is outlined in detail below.

Physics Requirements: 30 Credits

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.
Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2104 Analytical Mechanics

4 Credits This course covers statics by virtual work and potential energy methods. Stability of equilibrium. Particle dynamics, harmonic oscillator and planetary motion. Rigid body dynamics in two and three dimensions. Lagrangian mechanics. Dynamics of oscillating systems.

Prerequisite(s): MA 2122 and PH 2023.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2344 Introduction to Modern and Solid State Physics

4 Credits Special theory of relativity. Michelson-Morley experiment. Planck’s quantum hypothesis, photoelectric effect, Compton effect, Rutherford scattering, Bohr’s atom, DeBroglie wavelength, electron diffraction, wave function, uncertainty principle, Schrodinger equation. Application to: square well potential, one electron atom. Atomic nucleus, fission and fusion.

Prerequisite(s): PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 3234 Electricity and Magnetism

4 Credits The course covers properties of the electrostatic, magnetostatic and electromagnetic field in vacuum and in material media. Maxwell’s equations with applications to elementary problems.

Prerequisite(s): MA 2122 and PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4124 Thermodynamics and Statistical Physics

4 Credits The course covers fundamental laws of macroscopic thermodynamics, heat, internal energy and entropy. Topics include an introduction to statistical physics, and applications of Maxwell, Fermi-Dirac and Bose-Einstein distributions.

Prerequisite(s): MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4364 Introduction to the Quantum Theory

4 Credits The course gives a quantitative introduction to the quantum theory, which describes light, electrons, atoms, nuclei and solid matter. Superposition principle, expectation values, momentum operator and wave function, duality, current vector, Hermitian operators, angular momentum, solution of the radial equation, electron in a magnetic field, perturbation theory, WKB approximation, identical particles. Applications include alpha decay, electrons in a periodic lattice, hydrogen spectrum, helium atom, neutron-proton scattering, and quark model of baryons.

Prerequisite(s): MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Math Requirements: 29 Credits

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
**MA 1124 Calculus II**

*4 Credits* This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

*Prerequisite(s): MA 1124 or equivalent.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2112 Multivariable Calculus A**

*2 Credits* This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

*Prerequisite(s): MA 2012.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2122 Multivariable Calculus B**

*2 Credits* This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

*Prerequisite(s): MA 2112.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

*Prerequisite(s): MA 2012.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
**MA 3012 Introduction to Probability I**

*Prerequisite(s): MA 2112 or equivalent.*

*Note: Not open to students who have taken MA 2212.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 3112 Complex Variables I**

*Prerequisite(s): MA 2122 or equivalent.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 4113 Introduction to Mathematical Statistics**

3 Credits This is a standard first course in mathematical statistics, recommended for those who will take advanced courses in statistics. Topics covered: Sampling distributions, tests of hypotheses, significance tests, point and interval estimation, regression and analysis of variance.

*Prerequisite(s): MA 3012 or MA 2222.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 4413 Applied Partial Differential Equations**

3 Credits This course looks at the heat equation, homogeneous and non-homogeneous boundary conditions, Green’s function, separation of variables, Fourier series and Fourier transform, Maximum principle, existence and uniqueness, Poisson integral formula, the wave equation. Shock waves, conservation laws.

*Prerequisite(s): MA 2132 and MA 3112.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 4423 Introductory Numerical Analysis**

*Prerequisite(s): MA 2132 and some experience in computer programming.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Physics Electives: 10 Credits

Students should select 10 credits from the following list of Physics elective courses. Graduate courses may be substituted with adviser’s approval.

**PH 2813 Astronomy and Astrophysics**

3 Credits This course covers the historical development of observational astronomy. Traditional and modern observational techniques. Theories of formation and evolution of stars, planets and galaxies. Current developments in astronomy, cosmology and astrophysics.

*Prerequisite(s):* PH 2033.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 3054 Introduction to Polymer Physics**

4 Credits This course introduces polymer physics and its applications in engineering. The course includes polymer assemblies, morphology and motion, mechanical and dielectric response, transitions and relaxations, timetemperature equivalence, yield and fracture, conducting polymers, optics of polymers, oriented structures, nanofibers, composites.

*Prerequisite(s):* CM 1004. 
*Corequisite(s):* PH 2023.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 3103 Fundamentals of Applied Nuclear Physics**

3 Credits This course surveys the fundamentals of nuclear physics with application to nuclear engineering. Topics include an introduction to quantum mechanics, nuclear forces and nuclear structure, nuclear stability and reactions, natural and induced radioactivity.

*Prerequisite(s):* CM 1004, PH 2033 and MA 2132.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 3244 Concepts of Nanotechnology**

4 Credits This course is the first of an interdisciplinary, two-semester sequence on concepts, techniques and applications of nanotechnology. Introduction to nanotechnology, examples of nanoscale systems. Systematics in miniaturization from the mm to the nm scale. Limits to miniaturization. Quantum concepts and elementary Schrodinger theory. Quantum effects in the behavior of chemical matter. Examples of self-assembled nanosystems from nature and from contemporary industrial products.

*Prerequisite(s):* PH 2033.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 3423 Light and Lighting**

Prerequisite(s): CM 1004 and PH 2033.
Also listed under: EE 3423
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 3474 Introduction to Modern Optics

Prerequisite(s): PH 2033 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 3503 Introduction to Radiation Physics and Dosimetry

3 Credits The course examines the basic theory and practice of Radiation and Health Physics. Atomic and nuclear radiation. X-ray and gamma radiation. Interaction of radiation with matter, and the effects on living tissue. Principles of radiation detection, radiation measurement, external and internal dosimetry. Radiation Protection.

Prerequisite(s): PH 3103 or PH 2344.
Also listed under: ME 4383.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4244 Techniques and Applications of Nanotechnology

4 Credits This is the second of a two-course sequence on concepts and techniques of nanotechnology. Novel function and performance can occur with materials or devices of size scales of one to 100 nanometers, a range extending from molecular scale to that of typical linewidths in contemporary microelectronics. Nanosystems may provide entirely new functions, by virtue of access enabled by the small size. Photo and x-ray lithographic patterning. Scanning probe microscopes for observation and for fabrication. Molecular machines as envisioned by Drexler. The role of Van der Waals force. Questions of machine manufacturability on the nm scale. The IBM GMR hard-drive read head. Micro- and nanoelectromechanical devices and systems. Singleelectron electronics. Molecular electronics.

Prerequisite(s): PH 3244.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 4444 Quantum Optics

4 Credits Beginning with a review of classical optics and quantum mechanics, this course covers foundations of spectroscopy, including atomic transition rates, selection rules and spectral line shapes. The course explores the quantum nature of light. Topics include photon statistics, coherent states, squeezed light, resonant light-atom interactions, atoms in cavities and laser cooling.

Prerequisite(s): PH 3474.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
PH 4554 Solid State Physics

4 Credits The course covers basic concepts in condensed matter physics and preparation for the advanced quantum theory of solid state.

Prerequisite(s): PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4603 Special Topics in Physics

3 Credits Variable credit special topics courses in physics.

Prerequisite(s): PH 2344 and Physics adviser approval. (Course may be repeated for additional credit.)
Weekly Lecture Hours: 0 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Math Electives: 9 Credits

Students should select 9 credits from the following list of Math elective courses. Graduate courses may be substituted with adviser's approval.

MA 3103 Problem Solving and Proofs

3 Credits This course covers mathematical problemsolving, proofs and innovative reasoning. Discussion of independent challenging problems from Analysis, Complex Analysis, Probability, Combinatorics, Linear Algebra, Number Theory and Graph Theory.

Prerequisite(s): MA 2312 and MA 2012.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3203 Linear Optimization

3 Credits This course examines linear optimization problems with constraints; optimality conditions and duality theory, the simplex method, complexity of the simplex method, interior point methods, selected applications, network flow problems and the network simplex method.

Prerequisite(s): MA 2312 and MA 2112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3303 Differential Geometry

3 Credits This course covers curves and surfaces. Curvature. First and second fundamental form. Gaussian curvature. Geodesics, Minimal Surfaces. Gauss-Bonnet Theorem.

Prerequisite(s): MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 4013 Introduction to Number Theory

3 Credits This course covers properties of integers and prime numbers. Congruences. Theorems of Fermat, Euler and Wilson. Quadratic residues. Diophantine equations.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4023 Elements of Abstract Algebra

3 Credits This course covers basic properties of groups, rings, fields, Euclidean rings and modules. Field extensions and Galois theory. Finite fields.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4613 Analysis I

3 Credits This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.

Prerequisite(s): MA 2122 and MA 2132.
Note: This course is required for MA minors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4623 Analysis II

3 Credits This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.

Prerequisite(s): MA 4613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Free Electives, Independant Study and Projects: 15 Credits

15 credits are reserved for free electives and independent study courses, of which 8 credits are reserved for a math project/thesis or a 6 credit physics project plus senior physics seminar.

Electives in the Humanities and Social Sciences: 18 Credits
Students are required to take 18 credits in the humanities and social sciences requiring EW 1013 and EW 1023 as prerequisites. To ensure some depth of knowledge, it is required that one or more of these elective courses be taken at an advanced level.

Other Required Courses: 17 Credits

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.
EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

PH 1002 Physics: The Genesis of Technology

2 Credits This course introduces contemporary topics in physics, along with readings and discussions of topics with technological implications.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

MA 1002 The Art of Mathematics

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Physics, B.S.

Bachelor of Science in Physics

The aim of the four-year Bachelor of Science in Physics is to prepare students thoroughly for any one of the many careers based on a concentration in physics. For some students, this means preparation for graduate school and further study leading to the master’s or doctoral degree. For many others, it means professional work in industry, government or in high school teaching. Some students use their major in physics to prepare for work in mathematics, chemistry, biology, medicine, engineering, law, history of science, writing or business. The program’s emphasis on fundamental knowledge, thorough analytic training and the universal logic of science enables physics students to take these different career paths.

The core of the program is 34 credits of required physics courses. Students begin with a general, calculus-based introductory sequence, followed by an introduction to Modern Physics, then intermediate courses in the fundamentals, i.e., Classical Mechanics, Electromagnetism, Thermal Physics and Statistical Mechanics and Quantum Physics. Students are provided with a solid grounding in mathematics and in the humanities and social sciences, and the choice to round out their education with two free electives. Students select the balance of their major courses from available elective physics offerings. Technical electives from other disciplines may be substituted with adviser approval, especially if a student is pursuing a concentration or minor.

Core Physics Requirements: 34 Credits
PH 1002 Physics: The Genesis of Technology

2 Credits This course introduces contemporary topics in physics, along with readings and discussions of topics with technological implications.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics
This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics: temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2344 Introduction to Modern and Solid State Physics

Prerequisite(s): PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2104 Analytical Mechanics

4 Credits This course covers statics by virtual work and potential energy methods. Stability of equilibrium. Particle dynamics, harmonic oscillator and planetary motion. Rigid body dynamics in two and three dimensions. Lagrangian mechanics. Dynamics of oscillating systems.

Prerequisite(s): MA 2122 and PH 2023.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 3234 Electricity and Magnetism

4 Credits The course covers properties of the electrostatic, magnetostatic and electromagnetic field in vacuum and in material media. Maxwell’s equations with applications to elementary problems.

Prerequisite(s): MA 2122 and PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4124 Thermodynamics and Statistical Physics

4 Credits The course covers fundamental laws of macroscopic thermodynamics, heat, internal energy and entropy. Topics include an introduction to statistical physics, and applications of Maxwell, Fermi-Dirac and Bose-Einstein distributions.

Prerequisite(s): MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 4364 Introduction to the Quantum Theory
4 Credits The course gives a quantitative introduction to the quantum theory, which describes light, electrons, atoms, nuclei and solid matter. Superposition principle, expectation values, momentum operator and wave function, duality, current vector, Hermitian operators, angular momentum, solution of the radial equation, electron in a magnetic field, perturbation theory, WKB approximation, identical particles. Applications include alpha decay, electrons in a periodic lattice, hydrogen spectrum, helium atom, neutron-proton scattering, and quark model of baryons.

*Prerequisite(s):* MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 4912 Senior Seminar in Physics**

2 Credits Senior physics students, in consultation with the instructor, study and prepare presentations on several current research topics in the general area of interdisciplinary physics. Students’ performance is rated on the mastery of the material chosen and also on the quality of the presentation made to the instructor and the seminar members.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Other Required Courses: 38 Credits**

**CM 1004 General Chemistry for Engineers**

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

*Corequisite(s):* EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**BMS 1004 Introduction to Cell and Molecular Biology**

4 Credits The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and genetics.

*Corequisite(s):* EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

or

**CM 1014 General Chemistry I**

4 Credits This course covers chemical equations, chemical conservation laws, stoichiometry, thermochemistry, properties of gases, atomic structure, periodic table, chemical bonding and molecular structure. The course is required for students in the Biomolecular Science Program.
CM 1024 General Chemistry II

4 Credits This course covers states of matter, chemical thermodynamics and equilibria, kinetics, acid-base chemistry, electrochemistry, introduction to organic chemistry, natural and synthetic polymers. The course is required for students in the Biomolecular Science Program.

Prerequisite(s): CM 1004 or CM 1014. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

CS 1133 Engineering Problem Solving and Programming

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life–related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay
3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2122 Multivariable Calculus B

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Technical Electives: 26 Credits

Students should select six physics elective and two math electives courses. Electives from other disciplines may be substituted with adviser approval.

Electives in the Humanities and Social Sciences: 18 Credits

Students are required to take 18 elective credits in the humanities and social sciences, with EN 1013 and EW 1023 as prerequisites. To gain depth of knowledge, it is recommended that one or more of these electives be taken at an advanced level.

Free Electives, Independent Study and Projects: 12 Credits
Twelve credits are reserved for free electives and independent study courses, of which 6 credits are recommended for use on a project or thesis topic.

An illustrative typical course of study for the Bachelor of Science degree in physics is shown at the end of this section.

**Typical Course of Study for the Bachelor of Science in Physics**

**Freshman Year**

**Fall Semester: 14 Credits**

**PH 1002 Physics: The Genesis of Technology**

*2 Credits* This course introduces contemporary topics in physics, along with readings and discussions of topics with technological implications.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1004 General Chemistry for Engineers**

*4 Credits* This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1
or

**CM 1014 General Chemistry I**

*4 Credits* This course covers chemical equations, chemical conservation laws, stoichiometry, thermochemistry, properties of gases, atomic structure, periodic table, chemical bonding and molecular structure. The course is required for students in the Biomolecular Science Program.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of
trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 17 Credits

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CM 1024 General Chemistry II

4 Credits This course covers states of matter, chemical thermodynamics and equilibria, kinetics, acid-base chemistry, electrochemistry, introduction to organic chemistry, natural and synthetic polymers. The course is required for students in the Biomolecular Science Program.
Prerequisite(s): CM 1004 or CM 1014. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

or

BMS 1004 Introduction to Cell and Molecular Biology

4 Credits The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and genetics.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 1133 Engineering Problem Solving and Programming

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Sophomore Year
Fall Semester: 16.5 Credits

**PH 2021 Introductory Physics Laboratory I**

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**PH 2023 Electricity, Magnetism and Fluids**

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  - ***3 Free Elective 3 Credits
  - Humanities and Social Sciences Elective #1 3 Credits
  - Humanities and Social Sciences Elective #2 3 Credits

Spring Semester: 15.5 Credits
PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2104 Analytical Mechanics

4 Credits This course covers statics by virtual work and potential energy methods. Stability of equilibrium. Particle dynamics, harmonic oscillator and planetary motion. Rigid body dynamics in two and three dimensions. Lagrangian mechanics. Dynamics of oscillating systems.

Prerequisite(s): MA 2122 and PH 2023.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2344 Introduction to Modern and Solid State Physics

Prerequisite(s): PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2122 Multivariable Calculus B

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Junior Year

Fall Semester: 17 Credits

PH 3234 Electricity and Magnetism

4 Credits The course covers properties of the electrostatic, magnetostatic and electromagnetic field in vacuum and in material media. Maxwell’s equations with applications to elementary problems.

Prerequisite(s): MA 2122 and PH 2033.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- PH 2/3**3 PH Elective 3 Credits

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 5040 Chemical Laboratory Safety
This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- ***3 Free Elective 3 Credits
- Humanities and Social Sciences Elective #3 3 Credits

Spring Semester: 15 Credits

**PH 4364 Introduction to the Quantum Theory**

4 Credits The course gives a quantitative introduction to the quantum theory, which describes light, electrons, atoms, nuclei and solid matter. Superposition principle, expectation values, momentum operator and wave function, duality, current vector, Hermitian operators, angular momentum, solution of the radial equation, electron in a magnetic field, perturbation theory, WKB approximation, identical particles. Applications include alpha decay, electrons in a periodic lattice, hydrogen spectrum, helium atom, neutron-proton scattering, and quark model of baryons.

Prerequisite(s): MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- PH 2/3/4**4PH Elective 4 Credits
- MA 2/3/4**4 Math Elective 4 Credits
- Humanities and Social Sciences Elective #4 3 Credits

Senior Year

Fall Semester: 17 Credits

**PH 4124 Thermodynamics and Statistical Physics**

4 Credits The course covers fundamental laws of macroscopic thermodynamics, heat, internal energy and entropy. Topics include an introduction to statistical physics, and applications of Maxwell, Fermi-Dirac and Bose-Einstein distributions.

Prerequisite(s): MA 2122 and PH 2344.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 4902 Introduction to Senior Project in Physics**

2 Credits A qualified senior physics student or group of students work with a faculty member (and possibly graduate students) on an advanced problem in physics. In this introductory phase the student(s) and adviser select a suitable theoretical or experimental problem in the subject area and use various resources to solve it.
PH 4912 Senior Seminar in Physics

2 Credits Senior physics students, in consultation with the instructor, study and prepare presentations on several current research topics in the general area of interdisciplinary physics. Students’ performance is rated on the mastery of the material chosen and also on the quality of the presentation made to the instructor and the seminar members.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- PH 3/4/5**3PH Elective 3 Credits
- MA 3/4**3 Math Elective 3 Credits
- Humanities and Social Sciences Elective #5 3 Credits

Spring Semester: 16 Credits

PH 4904 Senior Project in Physics

4 Credits In the project’s concluding phase, senior physics students or group of students work with a faculty member (and possibly graduate students) to solve an advanced problem in interdisciplinary physics. The conclusion of the project is a written report and an oral presentation made to the supervising faculty.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 8 | Weekly Recitation Hours: 0
- PH 3/4/5**3 PH Elective 3 Credits
- PH 3/4/5**3 PH Elective 3 Credits
- PH 3/4/5**3 PH Elective 3 Credits
- Humanities and Social Sciences Elective #6 3 Credits

Total credits required for the degree: 128

Footnotes

1 Students may choose to take a two-semester sequence in chemistry, or a combination of a single semester of chemistry and a semester of biology.

Masters

Physics, M.S.
Master of Science in Physics

The Master of Science in Physics will be offered only on the Brooklyn Campus and the courses will be offered primarily in the evening. Admitted students will be expected to have a BS in physics or a closely-related discipline and to make up any deficiencies before commencing graduate studies. Letters of recommendation, GRE and TOEFL scores, and application letters will be considered in the admission process.

Degree Requirements

Completion of the Master of Science in Physics requires a minimum of 30 semester credits. Students are required to take 6 credits of basic courses (a 3-credit course in quantum mechanics and two semesters of graduate seminar) with the balance of the necessary credits earned in elective physics courses. The elective courses may include a 6-credit research project or a 9-credit thesis in physics. Choice of a project or thesis option and of elective courses should be made with the approval of the graduate adviser. As many as 9 credits of physics courses taken elsewhere may be accepted towards the degree, with the approval of the graduate adviser. No comprehensive examination is required for the master's degree in physics.

Minimum Course Requirements

PH 6673 Quantum Mechanics I

3 Credits Quantum mechanics with applications to atomic systems. The use of Schrodinger’s equations. Angular momentum and spin. Semi-classical theory of field-matter interaction.

Prerequisite(s): MA 2122 and PH 3234 or equivalents.

Also listed under: EL 6553.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 9531 Graduate Seminar in Physics I

1.5 Credits Students presenting current topics in Physics in a seminar setting to other students and supervising faculty. Topics chosen by the student with guidance from faculty.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 9541 Graduate Seminar in Physics II

1.5 Credits Students presenting current topics in Physics in a seminar setting to other students and supervising faculty. Topics chosen by the student with guidance from faculty.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Elective Courses: 24 Credits

Of elective courses, 4 will be allowed at the 5000 level.

**PH 5343 Physical Basis of Nanotechnology**

*3 Credits* This course focuses on the underlying physical basis of nanotechnology. Introduction to nanotechnology, examples of nanoscale systems. Systematics in miniaturization from the mm to the nm scale. Limits to miniaturization. Quantum concepts and elementary Schrodinger theory. Quantum effects in the behavior of chemical matter. Examples of self-assembled nanosystems from nature and from contemporary industrial products.

*Prerequisite(s):* PH 2033.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 5443 Physical Techniques and Applications of Nanotechnology**

*Prerequisite(s):* PH 2033.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 5473 Modern Optics**

*Prerequisite(s):* MA 2122 and PH 3234 or equivalents.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 5481 Modern Optics Lab**

*1 Credits* The modern optics laboratory includes experimental investigations into laser modes, velocity of light by time-of-flight, Fourier optics, holography, Fourier transform spectroscopy, crystal optics and nonlinear optics.

*Pre/Co-requisite: PH 5473 or equivalent.*

Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**PH 5493 Physics of Nanoelectronics**
3 Credits This course covers limits to the ongoing miniaturization (Moore’s Law) of the successful silicon-device technology imposed by physical limitations of energy dissipation, quantum tunneling and discrete quantum electron states. Quantum physical concepts and elementary Schrodinger theory. Conductance quantum and magnetic flux quantum. Alternative physical concepts appropriate for devices of size scales of 1 to 10 nanometers, emphasizing role of power dissipation. Tunnel diode, resonant tunnel diode, electron wave transistor; spin valve, tunnel valve, magnetic disk and random access memory; single electron transistor, molecular crossbar latch, quantum cellular automata including molecular and magnetic realizations. Josephson junction and “rapid single flux quantum” computation. Photo- and x-ray lithographic patterning, electron beam patterning, scanning probe microscopes for observation and for fabrication; cantilever array as dense memory, use of carbon nanotubes and of DNA and related biological elements as building blocks and in selfassembly strategies.

Prerequisite(s): PH 2033.
Also listed under: EL 5533.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 5533 Physics of Quantum Computing

3 Credits This course explores limits to the performance of binary computers, traveling salesman and factorization problems, security of encryption. The concept of the quantum computer based on linear superposition of basis states. The information content of the qubit. Algorithmic improvements enabled in the hypothetical quantum computer. Isolated two-level quantum systems, the principle of linear superposition as well established. Coherence as a limit on quantum computer realization. Introduction of concepts underlying the present approaches to realizing qubits (singly and in interaction) based on physical systems. The systems in present consideration are based on light photons in fiber optic systems; electron charges in double well potentials, analogous to the hydrogen molecular ion; nuclear spins manipulated via the electron-nuclear spin interaction, and systems of ions such as Be and Cd which are trapped in linear arrays using methods of ultra-high vacuum, radiofrequency trapping and laser-based cooling and manipulation of atomic states. Summary and comparison of the several approaches.

Prerequisite(s): PH 2033.
Also listed under: EL 5553.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 5663 Physics of Alternative Energy

3 Credits The course examines non-petroleum sources of energy including photovoltaic cells, photocatalytic generators of hydrogen from water, and nuclear fusion reactors. The advanced physics of these emerging technical areas are introduced in this course. Semiconductor junctions, optical absorption in semiconductors, photovoltaic effect. Energy conversion efficiency of the silicon solar cell. Single crystal, polycrystal, and thin film types of solar cells. Excitons in bulk and in confined geometries. Excitons in energy transport within an absorbing structure. Methods of making photocatalytic surfaces and structures for water splitting. Conditions for nuclear fusion. Plasmas and plasma compression. The toroidal chamber with magnetic coils as it appears in recent designs. Nuclear fusion by laser compression (inertial fusion). Small scale exploratory approaches to fusion based on liquid compression and electric field ionization of deuterium gas.

Prerequisite(s): PH 2033.
Also listed under: EL 5663.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 6403 Physical Concepts of Polymer Nanocomposites

3 Credits This course presents fundamental aspects of polymer nanocomposites and updates on recent advancements and modern applications. Topics include nanostructured materials; assembly at interfaces; interactions on surfaces; properties of polymer nanocomposites; reliability; nanodevices.
PH 6513 Introduction to Solid-State Physics I

3 Credits Phenomena and theory of physics of crystalline solids. Topics from thermal, magnetic, electrical and optical properties of metals, insulators and semiconductors.

Prerequisite(s): PH 2344 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 6523 Introduction to Solid-State Physics II

3 Credits Phenomena and theory of physics of crystalline solids. Topics from thermal, magnetic, electrical and optical properties of metals, insulators and semiconductors.

Prerequisite(s): PH 6513.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 6553 Advanced Quantum Computing

3 Credits Advanced topics in quantum computation are explored.

Prerequisite(s): PH 5553.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 6683 Quantum Mechanics II

3 Credits Quantum mechanics with applications to atomic systems. The use of Schrodinger’s equations. Angular momentum and spin. Semi-classical theory of field-matter interaction.

Prerequisite(s): PH 6673.
Also listed under: EL 6563.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 8013 Selected Topics in Advanced Physics

3 Credits Current or advanced topics of particular interest to graduate students are examined. Subject matter is determined each year by students and faculty. The course may be given in more than one section. Consult department office for current offerings.

Note: this course is not offered every semester.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 8023 Selected Topics in Advanced Physics
3 Credits Current or advanced topics of particular interest to graduate students are examined. Subject matter is determined each year by students and faculty. The course may be given in more than one section. Consult department office for current offerings.

Note: this course is not offered every semester.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 999X PhD Dissertation in Physics**

3 Credits An original investigation in some branch of physics, which may serve as basis for the MS or PhD degree, is performed under the direction of a member of the department. The number of research credits registered for each semester should realistically reflect the time devoted to research.

Prerequisite(s): Degree status and graduate advisers and research director’s consent.

Total Credits: 30

**Department of Chemical and Biomolecular Engineering**

*Head:* Walter Zurawsky

NEED NEW DESCRIPTION

**Faculty**

**Professor**

**Jovan Mijovic,** Professor of Chemical Engineering
PhD, University of Wisconsin at Madison
*Relaxation dynamics in synthetic and biological complex systems, modeling of processing of polymers*

**Associate Professors**

**Rastislav Levicky,** Donald F. Othmer Associate Professor of Chemical Engineering
PhD, University of Minnesota
*Biological polyelectrolytes, biosensors and bio-diagnostics*

**Edward N. Ziegler,** Associate Professor of Chemical Engineering
PhD, Northwestern University
*Kinetics and reactor design, air pollution control, fluidization*
Walter Zurawsky, Department Head of Chemical and Biological Engineering, Associate Professor of Chemical Engineering
PhD, University of Illinois
*Plasma polymerization, mass transfer in membranes*

**Assistant Professor**

Jin Ryoun Kim, Joseph J. and Violet J. Jacobs Assistant Professor of Chemical Engineering
PhD, University of Wisconsin at Madison
*Protein engineering, structure and properties of proteins*

**Research Faculty**

Leonard Stiel, Research Professor of Chemical Engineering
PhD, Northwestern University

**Faculty Emeriti**

Robert C. Ackerberg, Professor Emeritus of Chemical Engineering
PhD, Harvard University

Robert F. Benenati, Professor Emeritus of Chemical Engineering
PhD, Polytechnic Institute of Brooklyn

**Affiliated Faculty**

Stephen Arnold, Institute Professor and Thomas Potts Professor of Physics
PhD, City University of New York
*Microparticle photophysics, optics*

Bruce A. Garetz, Professor of Physical Chemistry
PhD, Massachusetts Institute of Technology
*Laser spectroscopy, laser light scattering, non-linear optics, laser-induced nucleation and multiphoton processes*

**Chemistry**

*Program Directors:*
Bruce A. Garetz, Undergraduate
Jin K. Montclare, Graduate
Iwao Teraoka, Graduate

Chemistry is concerned with knowledge of the structures, properties and reactions of matter and evolving theories to explain observations, predict chemical behavior and suggest experiments.

Classical divisions of chemistry are (1) organic chemistry, dealing primarily with compounds of carbon; (2) inorganic chemistry, concerned with all other compounds; (3) analytical chemistry, concerned with quantitative determinations of composition; and (4) physical chemistry, which seeks to understanding matter, including chemical bonds and molecular interactions.

These classical fields have increasingly overlapped, and several interdisciplinary fields are now of great importance: biochemistry, electrochemistry, photochemistry, polymer chemistry, solid-state chemistry and chemical physics.
The department offers a full complement of undergraduate and graduate courses in various aspects of modern chemistry. Graduates are prepared for positions at educational institutions, research institutes, industrial organizations and government laboratories. Staff members conduct and supervise research at undergraduate, graduate and postdoctoral levels. This research is combined with teaching so that courses at all levels are taught by chemists who are highly competent in their fields. Undergraduates participating in required research activities are stimulated and well prepared for graduate school or professional positions. The department offers programs leading to a Bachelor of Science in Biomolecular Science, a Master of Science in Chemistry and a Doctor of Philosophy in Materials Chemistry.

**Goals and Objectives**

The goals of the Master of Science program are to advance students’ knowledge and experience beyond the BS level and equip them with the needs of a changing industrial environment.

The goal of the PhD program is to offer candidates an opportunity to learn various aspects of materials chemistry especially associated with polymers and bio-active materials.

**Undergraduate Programs**

The BS degree requirements are described in the Biomolecular Science Program section of this catalog. The BS in biomolecular science, with an option in chemistry with an approved selection of electives, is certified by the American Chemistry Society (ACS) to be a rigorous academic program, which is valued by both potential employers and graduate schools. ACS-certified graduates are immediately eligible for society membership.

**Graduate Programs**

**Chemistry, M.S.**

Students are trained to perform at the midmanagerial level of the chemical industry and other organizations involved in chemically related work. Many students continue toward a doctoral degree and are already employed in chemistry-related institutions and will gain the knowledge to move ahead in these organizations. The MS program will allow graduate credit for special learning opportunities involving research as arranged with program advisers.

**Materials Chemistry, Ph.D.**

The PhD program in materials chemistry is highly interdisciplinary, exposing students to a wide range of exciting, cutting-edge science. The program’s objective is to educate students through classroom and research experiences in the emerging discipline of materials chemistry.

Students engage in research topics that include chemical and biological synthesis of polymeric materials, structural and physical properties of synthetic and biological macromolecules, the interplay between molecularlevel structure and function and the biological properties of macromolecules.

The program promotes interdisciplinary interactions among the students and faculty whose interests lie at the boundaries of chemistry, biology and engineering. In particular, the faculty specializes in the integration of biotechnology for creating new catalysts, sensors and macromolecules as well as in the detailed characterization and understanding of such polymers and novel super-molecular structures. The Materials Chemistry Program encompasses the Polymer Research Institute, the Center for Biocatalysis and Bioprocessing of Macromolecules and more.

**Masters**
Chemistry, M.S.

Requirements for the Master of Science

Candidates for the MS in Chemistry plan their programs in accordance with the following list of requirements:

A. Required (core) courses, 4 courses, 3 credits each:

1. Physical chemistry

CM 7043 Statistical Thermodynamics and Kinetics

3 Credits This course covers statistical mechanics for chemical systems. Also covered are ensembles, partition functions, thermodynamic functions, applications to various systems, including non-ideal gas, gas of diatomic molecules, polymer, surface phenomena, chemical equilibria, biophysics and reaction kinetics.

Prerequisite(s): Undergraduate physical chemistry and physics or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

2. Organic chemistry

CM 9033 Physical Organic Chemistry

3 Credits This course covers molecular structure and bonding. Also covered are stereochemical and conformational principles; theories of bonding; physical parameters of stable and reactive molecular states; and applications in biochemistry and polymer chemistry.

Prerequisite(s): Undergraduate organic chemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

3. Analytical chemistry

(choose one of the following two)

CM 8023 Principles of Spectroscopy

3 Credits This course covers rotational, vibrational and electronic states of atoms and molecules. Also covered are the interaction of radiation with atoms and molecules; molecular symmetry; rotational and vibrational spectroscopy; and electronic
spectroscopy.

Prerequisite(s): Undergraduate physical chemistry or adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 8073 Organic Spectroscopy

3 Credits This course covers structure elucidation by joint applications of spectroscopic techniques such as proton and carbon-13 magnetic resonance, infrared and mass spectroscopy and other methods.

Prerequisite(s): CM 9033 or Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

4. Inorganic chemistry, polymer chemistry, or biochemistry

(choose one of the following three)

CM 6013 Advanced Inorganic Chemistry

3 Credits This course covers theories of bonding in inorganic compounds. It introduces group theory as applied to molecular orbital and ligand field theories. Also covered are spectra of inorganic compounds and non-aqueous solvent. The transition to metal chemistry is introduced.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9413 Biochemistry I

3 Credits This course covers structure and function of biological macromolecules: proteins, nucleic acids, polysaccharides. Also covered are enzymatic kinetics, mechanism and control.

Prerequisite(s): Undergraduate biochemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 7723 Synthesis of Macromolecules

3 Credits This course covers organic aspects, including chemistry of monomer and polymer formation; modern mechanistic analyses of reactions; stereochemistry of polymer structures; forces of stereo regulation; condensation, free radical (bulk, suspension, emulsion, solution), ionic, ring-opening and non-classical polymerization reactions.

Prerequisite(s): Undergraduate organic chemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

B. Electives: 12 Credits

Two courses from CM listing and two courses from CM, BE, BT and CBE listings
C. Seminar: 1.5 Credits

**CM 9731 Seminar in Chemistry I**

*1.5 Credits* This course covers chemical topics of current interest and is presented by participating students, staff and outside speakers.

*Note: One semester is required for MS chemistry students; three semesters required for PhD candidates.*

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

D. Chemical Literature: 1.5 Credits

**CM 5021 Information Sources for the Chemical Sciences**

*1.5 Credits* This course is a hands-on introduction to methods and tools for searching and includes both electronic (CD-ROM and online) as well as print databases. Students may emphasize topics related to their research. Graduate students are required to take this course.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

E. Chemical Colloquium: 0 Credits

- CM 9710 Chemical Colloquium *0 Credits*

F. Chemical Laboratory Safety: 0 Credits

**CM 5040 Chemical Laboratory Safety**

*0 Credits* This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

G. Guided Studies Project: 3 Credits

**CM 8713 Guided Studies in Chemistry I**
3 Credits This is a special project (experimental, theoretical, computational or literature search).

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total: 30 Credits

Note:
To meet graduation requirements, students must have an overall B average in all courses (excluding seminar, chemical information and guided studies). Where CM 9731 and CM 5021 are not offered, they may be replaced by an elective course or a second Guided Studies project (CM 8723 Guided Studies in Chemistry I). Students must be in continuous attendance at the departmental colloquia (CM 9710).

Doctorate

Materials Chemistry, Ph.D.

Requirements for the Doctor of Philosophy

Candidates for the degree Doctor of Philosophy in Materials Chemistry are to plan their programs in accordance with the requirements listed below.

A. Required (core) courses, 4 courses 3 credits each:

1. Physical chemistry

CM 7043 Statistical Thermodynamics and Kinetics

3 Credits This course covers statistical mechanics for chemical systems. Also covered are ensembles, partition functions, thermodynamic functions, applications to various systems, including non-ideal gas, gas of diatomic molecules, polymer, surface phenomena, chemical equilibria, biophysics and reaction kinetics.

Prerequisite(s): Undergraduate physical chemistry and physics or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

2. Organic chemistry
CM 9033 Physical Organic Chemistry

3 Credits This course covers molecular structure and bonding. Also covered are stereochemical and conformational principles; theories of bonding; physical parameters of stable and reactive molecular states; and applications in biochemistry and polymer chemistry.

Prerequisite(s): Undergraduate organic chemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

3. Analytical chemistry

(one of the following two)

CM 8023 Principles of Spectroscopy

3 Credits This course covers rotational, vibrational and electronic states of atoms and molecules. Also covered are the interaction of radiation with atoms and molecules; molecular symmetry; rotational and vibrational spectroscopy; and electronic spectroscopy.

Prerequisite(s): Undergraduate physical chemistry or adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 8073 Organic Spectroscopy

3 Credits This course covers structure elucidation by joint applications of spectroscopic techniques such as proton and carbon-13 magnetic resonance, infrared and mass spectroscopy and other methods.

Prerequisite(s): CM 9033 or Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

4. Inorganic chemistry, polymer chemistry, or biochemistry

(one of the following three courses)

CM 6013 Advanced Inorganic Chemistry

3 Credits This course covers theories of bonding in inorganic compounds. It introduces group theory as applied to molecular orbital and ligand field theories. Also covered are spectra of inorganic compounds and non-aqueous solvent. The transition to metal chemistry is introduced.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9413 Biochemistry I
3 Credits This course covers structure and function of biological macromolecules: proteins, nucleic acids, polysaccharides. Also covered are enzymatic kinetics, mechanism and control.

Prerequisite(s): Undergraduate biochemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 7723 Synthesis of Macromolecules

3 Credits This course covers organic aspects, including chemistry of monomer and polymer formation; modern mechanistic analyses of reactions; stereochemistry of polymer structures; forces of stereo regulation; condensation, free radical (bulk, suspension, emulsion, solution), ionic, ring-opening and non-classical polymerization reactions.

Prerequisite(s): Undergraduate organic chemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

B. Electives: 12 Credits

two courses from CM listing and two courses from CM, BE, BT and CBE listings

C. Seminar, 3 semesters: 4.5 Credits

CM 9731 Seminar in Chemistry I

1.5 Credits This course covers chemical topics of current interest and is presented by participating students, staff and outside speakers.

Note: One semester is required for MS chemistry students; three semesters required for PhD candidates.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9741 Seminar in Chemistry II

1.5 Credits This course covers chemical topics of current interest and is presented by participating students, staff and outside speakers.

Note: One semester is required for MS chemistry students; three semesters required for PhD candidates.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9751 Seminar in Chemistry III

1.5 Credits This course covers chemical topics of current interest and is presented by participating students, staff and outside speakers.

Note: One semester is required for MS chemistry students; three semesters required for PhD candidates.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

D. Chemical Literature: 1.5 Credits

**CM 5021 Information Sources for the Chemical Sciences**

*1.5 Credits* This course is a hands-on introduction to methods and tools for searching and includes both electronic (CD-ROM and online) as well as print databases. Students may emphasize topics related to their research. Graduate students are required to take this course.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

E. Chemical Colloquium: 0 Credits

- CM 9710 Chemical Colloquium

F. Chemical Laboratory Safety: 0 Credits

**CM 5040 Chemical Laboratory Safety**

*0 Credits* This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

G. Thesis Research: 36 Credits (minimum)

**CM 999X PhD Dissertation in Materials Chemistry**

*36 credits minimum Credits* This course requires original experimental or theoretical research, guided by a chemistry faculty member, that may serve as basis for a PhD. The minimum research registration requirement is 36 credits. Registration is required each semester consecutively until students complete adequate research projects and acceptable theses and have passed required oral examinations. A research fee is required.

*Prerequisite(s): Passing grade for RE 9990 PhD Qualifying Exam*

H. The rest, if any, are electives
(from CM, BE, BT, and CBE listings) up to 9 credits.

**Total: 75 Credits**

Students must pass a comprehensive qualifying examination in chemistry and present a doctoral dissertation. The qualifying exam is given once a year. Additional details on the qualifying examination should be obtained from the graduate adviser. Each candidate for the doctorate must complete a minimum of 75 credits of academic work past the bachelor’s degree, including a minimum of 36 credits of dissertation research. Of those 75 credits required, at least 45 credits must be taken at NYU-Poly. Of the total 36 to 45 credits for dissertation research, up 12 credits can be transferred from research credits taken at another institution before coming to NYU-Poly. If the courses transferred from another institution do not include all four core courses, the missing core courses must be taken at NYU-Poly. The remaining courses to satisfy the doctoral degree are selected in consultation with the student’s adviser.

Candidates must have an overall B average in the core courses as well as in the core and elective courses (excluding seminar, chemical literature and thesis).

The student is required to declare a concentration by taking three courses from one of the following five areas: physical chemistry, organic chemistry, analytical chemistry, biochemistry and polymer chemistry. One of the three courses can be a core course. The course description indicates which courses qualify for the five areas. The GPA of the three courses must be B or better. Students must be in continuous attendance at the departmental colloquia (CM 9710).

**Biotechnology and Entrepreneurship**

*Program Director:* Evgeny Vulfson

**Goals and Objectives**

The goal of the Biotechnology and Entrepreneurship, M.S. program is to supplement students’ knowledge of biotechnology beyond the BS level and provide a basic understanding of the business side of the biotech industry and the requirements for starting their own biotechnology businesses. The program provides broad coverage of key areas of modern biotechnology combined with a wide choice of business- and finance-related courses.

This program is most suitable for mature students with work experience and recent graduates who aspire to be entrepreneurs and establish their own biotech enterprise.

**Masters**

**Biotechnology and Entrepreneurship, M.S.**

**Requirements for the Masters of Science**

Students entering this program should have an undergraduate degree in a science or engineering discipline and must have taken undergraduate courses in biochemistry and cell and molecular biology. The 30-credit curriculum of this program comprises three parts:
1. Four required courses offering a broad overview of cutting-edge areas of biotechnology: biocatalysis and biomaterials, biotechnology and health care, biosensors and biochips, biotechnology and the pharmaceuticals industry (12 credits).
2. One required and a wide choice of elective 1.5- and 3-credit courses on technology innovation, intellectual-property management, finances, marketing, business-plan preparation and fund-raising (12 credits).
3. Two more electives up to 6 credits or an optional project involving either technology-competition analysis and business-plan preparation or a placement in an early-stage start-up company (6 credits).

Required Courses: 15 Credits

The five required courses are listed below:

**BTE 6013 Biotechnology and the Pharmaceutical Industry**

3 Credits The course looks at the modern process of drug development in depth—from the early stage of target identification and generation of lead compounds to regulatory approval, and the role of biotechnology in this complex process. The course, featuring significant participation by industry professionals, covers all key aspects, including preclinical development, clinical trials and regulatory requirements. Real-life case studies illustrate critical points in the development process. Major classes of biotech drugs are briefly discussed. Many lectures are delivered by scientists from major U.S. pharmaceutical companies.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BTE 6023 Biotechnology and Health Care**

3 Credits The contribution of biotechnology to modern health care stretches far beyond developing therapeutic entities. This course provides an overview of key cutting-edge technologies such as stem-cell research and therapeutic cloning and demonstrates how their applications change “the conventional” for the availability of new treatments, monitoring services and diagnostics. The course also examines the implications of Human Genome Projects for health care and the role of genetics and epigenetic modifications of genes in health and disease. The role of biotechnology in managing several sociologically high-impact diseases in developed and developing countries is highlighted.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BTE 6033 Biosensors and Biochips**

3 Credits Biosensors and biochips are two of the most exciting, complex and fast-growing areas of biotechnology today—the interface between biotechnology, nanotechnology and microelectronics industries. The course covers conventional biosensors based on whole cells, nucleic acids, antibodies and enzymes (e.g. enzymatic glucose monitoring) as well as new and emerging technologies related to designing, fabricating and applying multi-array biochips and micro-fluidic systems (lab-on-the-chip). The goal is to familiarize students with basic principles of biosensors design and applications. The course also covers practical applications of this technology in health care, medical diagnostics, defense and other areas.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BTE 6043 Biocatalysis in Industry**
Biosensors and biochips is one of the most exciting, complex and fast-growing areas of biotechnology today—the interface between biotechnology, nanotechnology and microelectronics industries. The course covers conventional biosensors based on whole cells, nucleic acids, antibodies and enzymes (e.g. enzymatic glucose monitoring) as well as new and emerging technologies related to designing, fabricating and applying multiarray biochips and micro-fluidic systems (lab-on-the-chip). The goal is to familiarize students with basic principles of biosensors design and applications. The course also covers practical applications of this technology in health care, medical diagnostics, defense and other areas.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7703 Entrepreneurship**

3 Credits This course focuses on entrepreneurship and venture creation as key engines for wealth creation and successful business strategy in the modern, innovation-intensive, high-tech economy. The course deals with key issues such as: (1) assessing attractiveness of opportunities; (2) launching a new venture; (3) nurturing, growing and entrepreneurial venture; (4) obtaining the necessary financial, human and technology resources; (5) managing the transition from a small entrepreneurial firm to a large, sustainable, professionally managed but still entrepreneurial corporation; and (6) being an entrepreneur and promoting entrepreneurship in a large corporation.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Elective Courses: 6-15 Credits**

Students must take courses from the list below, which will amount to at least 6 credits in total; e.g., two 3-credit or four 1.5-credit courses:

**BE 6013 Molecular Immunology**

3 Credits The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6023 Cellular and Molecular Neuroscience**

3 Credits A three-part, comprehensive overview of cellular neuroscience, this course covers the physiology and biophysics of neurons; neuronal signal transduction, gene expression and transport of RNA and protein; and synaptic transmission and plasticity. The textbook is Fundamental Neuroscience by Zigmond, Bloom, Landis, Roberts and Squire. Supplementary readings are from other textbooks and journal articles.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6703 Materials in Medicine**
3 Credits The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 7013 Special Topics in Biotechnology

3 Credits Special topics include courses, designed to aid students in gaining extra knowledge/specialization in a subject area of their choice.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 9433 Protein Engineering

3 Credits This course introduces modern protein engineering techniques available to researchers to understand protein structure and function and to create entirely new proteins for many purposes. This new field lies at the interface of chemistry, biology and engineering. The first section discusses protein composition and structure, and various genetic, biochemical and chemical techniques required to engineer proteins, followed by specific topics. Topics include designing highly structured proteins that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 9443 Tissue Engineering

3 Credits This course covers basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature about tissue engineering; how to anticipate bio-compatibility issues relevant to a variety of implant devices students may later encounter; and current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 7923 Natural Polymers and Materials

3 Credits This course introduces natural and biomimetic polymers and is taught with an interdisciplinary view of biology, chemistry and macromolecular science. Topics covered include natural building blocks and methods by which nature carries out polymer synthesis and modification reactions; DNA; structural proteins; plant proteins; polysaccharides; polyesters; biosurfactants; polymers built from natural monomers and a wide variety of renewable resources; uses of these polymers as fibers, films, rheological modifiers, flocculants, foams, adhesives and membranes; special applications of natural polymers in medicine and as biodegradable plastics.
CM 8213 Bioanalytical Chemistry

3 Credits This course covers exciting new analytical methods in biochemistry and biotechnology, including atomic force microscopy, capillary electrophoresis, surface plasmon resonance and microarrays. The course is based directly on current scientific literature.

Prerequisite(s): CM 9413 or adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9423 Biochemistry II

3 Credits This course covers membrane structure and function and energy production, transformation and utilization. Also covered are the regulation of biochemical systems; the replication, transcription and translation of DNA; mutagenesis and carcinogenesis; and the Immune system.

Prerequisite(s): undergraduate biochemistry or adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

JW 6003 Introduction to Technical Communication

3 Credits This course is an overview of the research, writing, editing and design principles of technical communication. Particular attention is paid to writing for new media. Students learn to gather, organize and present information effectively, according to audience and purpose. Interviewing skills, technical presentation skills and writing for the Web are covered.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6093 Accounting and Finance

3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 7871 Intellectual Property for Technology and Information Managers

1.5 Credits This course focuses on the role of intellectual property (e.g., patents, trade secrets, copyrights and trademarks) as a major element in modern technology and information strategy. Relevant concepts and case studies are used, with examples representing classical and digital innovations.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MG 7873 Managing Intellectual Property and Intellectual Capital

3 Credits Intellectual property and intellectual capital constitute major strategic and financial assets of a modern business and can be employed to protect existing products, services and business methods and to accelerate development of new products, services and business methods. Firms can leverage intellectual property and intellectual capital to enhance their competitiveness, value and profitability. This approach is true in the physical world and in the online world of the Internet and e-business (where traditional principles of Intellectual Property Rights are often stretched and may need reinterpretation and even modification). Intellectual property is becoming increasingly complex as emerging digital technologies advance. This course is a broad and full survey of the main areas and issues associated with managing intellectual property and intellectual capital. The course concludes by examining how firms can best manage their intellectual capital.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8203 Project Management

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8653 Managing Technological Change and Innovation

3 Credits This course focuses on how to employ a dual perspective to manage technological change and innovation effectively. One perspective is based on individual, group and organizational theory, research and practice. This body of literature, viewpoints and experience provide essential guides to manage successfully the introduction of new technologies. Realizing the full potential of new technologies requires effectively managing change to assure the commitment of all stakeholders. The second perspective is based on innovation theory, research and practice. This body of literature, viewpoints and experience provide key insights to manage effectively the process of innovation and its impact on an enterprise. The course explicitly considers a firm’s need to manage and inspire people so they can communicate and innovate effectively.

Also listed under: MN 8653.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8711 Introduction to Entrepreneurial Finance

1.5 Credits This course is briefly introduces the financial requirements of entrepreneurial ventures and different sources of finance available to entrepreneurs. The course presents fundamentals for assessing various entrepreneurial financial strategies. The program will consider offering this course only at the request of other departments.

Note: This course is not open to MSM and continuing MBA students.
MG 8713 Entrepreneurial Finance

3 Credits  This course focuses on the financial requirements of entrepreneurial ventures and on different sources of finance available to entrepreneurs. The course develops an understanding on how to assess various entrepreneurial financial strategies. The course also examines the unique roles in the entrepreneurial finance arena of such factors as retail banks, investment banks, VCs, angels, internal sources of capital, and incubators.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8721 Introduction to Managing Growing Enterprises

1.5 Credits This introductory course deals with a critical challenge that potentially confronts all successful entrepreneurial small- or medium-size firms: how to sustain and accelerate major growth. At some point in the life of all growing enterprises, a firm usually must change. This course introduces several ways a growing firm can transform itself from a small to a larger enterprise. The course explores how such companies can maintain the benefits of an entrepreneurial commitment and spirit while obtaining needed skills associated with professionally managed larger firms. The program will consider offering this course only at the request of other departments.

Note: This course is not open to MSM and continuing MBA students.

MG 8731 Introduction to Corporate Entrepreneurship

1.5 Credits Large firms require professional management. to innovate, however, large corporations often must also practice entrepreneurship. This course briefly introduces how large corporations nurture and sustain entrepreneurship.

Note: Not open to MSM, MSOB and continuing MBA students. The program will consider offering this course only at the request of other departments.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8741 Introduction to Entrepreneurial Marketing and Sales

1.5 Credits This course introduces entrepreneurial marketing and sales and covers various topics about entrepreneurial marketing and sales. The program will consider offering this course only at the request of other departments.

Note: This course is not open to MSM and continuing MBA students.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

MG 8743 Entrepreneurial Marketing and Sales
This course focuses on critical marketing and sales challenges facing entrepreneurial firms. The course examines an underlying theme of entrepreneurship: that successful innovative enterprises must deeply understand relevant markets and must effectively cultivate and reach those markets. Topics include market identification, segmentation, sales, overall market planning, niche and viral marketing, and customers as sources of innovative ideas.

Projects

*Students may take up to three Projects in Biotechnology and Entrepreneurship:*

**BTE 9503 Project in Biotechnology and Entrepreneurship**

3 Credits This practical course offers students the opportunity to apply practically their knowledge and skills to analyzing technology, preparing their own business plans or working at an early stage biotech company. The student can sign up for up to three projects (one per semester).

*Prerequisite(s): Adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BTE 9513 Project in Biotechnology and Entrepreneurship**

3 Credits This practical course offers students the opportunity to apply practically their knowledge and skills to analyzing technology, preparing their own business plans or working at an early stage biotech company. The student can sign up for up to three projects (one per semester).

*Prerequisite(s): Adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BTE 9523 Project in Biotechnology and Entrepreneurship**

3 Credits This practical course offers students the opportunity to apply practically their knowledge and skills to analyzing technology, preparing their own business plans or working at an early stage biotech company. The student can sign up for up to three projects (one per semester).

*Prerequisite(s): Adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total: 30 Credits

**Biotechnology**

*Academic Adviser: Evgeny Vulfson*
Goals and Objectives

The main goal of the Biotechnology, M.S. program is to advance students' knowledge and experience beyond the BS level and equip them for the rapidly evolving, life-sciences-based industries. The program provides students with a broad and comprehensive coverage of established and emerging bio-technologies. Course topics range from industrial application of enzymes and bio-polymer synthesis to the modern drug design and the role of biotechnology in health care. The availability of many elective courses enables students to specialize further in selected biotechnology areas. The program includes a guided study to develop analytical skills. The students are trained to perform at the entry-/mid-managerial level in life-sciences-based industries and other organizations involved in biotechnology-related work.

Masters

Biotechnology, M.S.

Requirements for the Masters of Science

Students are expected to have an undergraduate degree in a science or engineering discipline and must have taken undergraduate courses in (1) biochemistry and (2) cell and molecular biology, or they may take these classes at NYU-Poly. The 30-credit curriculum consists of three parts:

1. Five required courses in biotechnology, protein and tissue engineering, enzyme catalysis and biosensors (15 credits);
2. Three elective courses in biotechnology and related fields (9 credits); and
3. Two more elective courses or Guided Studies in Biotechnology, involving laboratory or literature work (6 credits).

To meet graduation requirements, students must have an overall average of a B in all courses.

Required Courses: 15 Credits

The five required courses are listed below:

**BT 6013 Biotechnology and the Pharmaceutical Industry**

*3 Credits* The course offers an in-depth look at the modern process of drug development, from the early stage of target identification and generation of lead compounds to regulatory approval, and the role of biotechnology in this complex process. All the key aspects, including preclinical development, clinical trials and regulatory requirements, are covered with considerable contributions from pharmaceutical professionals. Real-life case studies are presented to illustrate critical points in the development process. Major classes of biotech drugs are briefly discussed. Many course lectures are delivered by scientists from the major U.S. pharmaceutical companies.

*Prerequisite(s): Adviser's approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BT 6023 Biotechnology and Health Care**

*3 Credits* Biotechnology’s contribution to modern health care stretches far beyond developing new therapeutic entities. This course provides an overview of key cutting-edge technologies such as stem-cell research and therapeutic cloning and
demonstrates how their applications change “the conventional” in terms of availability of new treatments, monitoring services and diagnostics. The course also examines the implications of Human Genome Project for health care and the role of genetics and epigenetic modifications of genes in health and disease. The role of biotechnology in managing a number of sociologically high-impact diseases in developed and developing countries is highlighted.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 6033 Biosensors and Biochips

3 Credits Biosensors and biochips is one of the most exciting, complex and fast-growing areas of biotechnology today—the interface between biotechnology, nanotechnology and micro-electronics industries. The course covers both conventional biosensors based on whole cells, nucleic acids, antibodies and enzymes (e.g., enzymatic glucose monitoring) as well as new and emerging technologies related to designing, fabricating and applying multi-array biochips and micro-fluidic systems (lab-on-the-chip). The goal is to familiarize students with basic principles of biosensors design and applications. The course also covers practical applications of this technology in health care, medical diagnostics, defense and other areas.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 9053 Enzyme Catalysis in Organic Synthesis

3 Credits The course provides a working knowledge of how to use biotransformations as a tool in organic chemistry. Students learn about general enzymatic reaction types that carry out the cleavage and formation of C-O bonds, P-O bonds, C-N bonds, C-C bonds, reduction reactions, oxidation reactions and isomerizations. Students also are taught advanced principles that apply to catalytic-protein engineering.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Choose one of the following:

BT 9433 Protein Engineering

3 Credits This course introduces modern protein engineering techniques available to researchers to understand protein structure and function and to create entirely new proteins for many purposes. This new field lies at the interface of chemistry, biology and engineering. The first section discusses protein composition and structure, and various genetic, biochemical and chemical techniques required to engineer proteins, followed by specific topics. Topics include designing highly structured proteins that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 9443 Tissue Engineering
Credits This course covers basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature about tissue engineering; how to anticipate bio-compatibility issues relevant to a variety of implant devices students may later encounter; and current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Elective Courses: 9-15 Credits

Students must select courses from the following list:

**BE 6703 Materials in Medicine**

*3 Credits* The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 7923 Natural Polymers and Materials**

*3 Credits* This course introduces natural and biomimetic polymers and is taught with an interdisciplinary view of biology, chemistry and macromolecular science. Topics covered include natural building blocks and methods by which nature carries out polymer synthesis and modification reactions; DNA; structural proteins; plant proteins; polysaccharides; polyesters; biosurfactants; polymers built from natural monomers and a wide variety of renewable resources; uses of these polymers as fibers, films, rheological modifiers, flocculants, foams, adhesives and membranes; special applications of natural polymers in medicine and as biodegradable plastics.

Prerequisite(s): Undergraduate physical chemistry or Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 8213 Bioanalytical Chemistry**

*3 Credits* This course covers exciting new analytical methods in biochemistry and biotechnology, including atomic force microscopy, capillary electrophoresis, surface plasmon resonance and microarrays. The course is based directly on current scientific literature.

Prerequisite(s): CM 9413 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6013 Molecular Immunology**
3 Credits The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 6043 Biocatalysis in Industry

3 Credits The course focuses on the commercial use of biological catalysts across various industry segments, including pharmaceuticals, health care, fine chemicals and food. The course combines a broad overview of technologies with industrial insights into the economics of bio-processing. The course also covers emerging biomaterials trends. Case studies are presented to facilitate analysis, formulate trends and underline major challenges.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 9423 Biochemistry II

3 Credits This course covers membrane structure and function and energy production, transformation and utilization. Also covered are the regulation of biochemical systems; the replication, transcription and translation of DNA; mutagenesis and carcinogenesis; and the Immune system.

Prerequisite(s): undergraduate biochemistry or adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BMS 8013 Advanced Molecular Biology

3 Credits Understanding the complex and dynamic interactions of cellular function. Topics include classical molecular biology (DNA, RNA and protein biosynthesis), recombinant DNA and genetic engineering, interactions of macromolecules and regulation of biologic systems. This course is not open to students who have taken BMS 4324.

Prerequisite(s): Instructor’s permission.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BMS 8023 Advanced Cell Biology

3 Credits Understanding cell biology through the biochemistry of the cell, with emphasis on the structure and function of the cell and its organelles. Advanced theories of cytoskeletal proteins, cell junctions and matrix, protein signaling and cell death will be covered. This course is not open to students who have taken BMS 3314.

Prerequisite(s): Instructor’s permission.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6023 Cellular and Molecular Neuroscience
3 Credits A three-part, comprehensive overview of cellular neuroscience, this course covers the physiology and biophysics of neurons; neuronal signal transduction, gene expression and transport of RNA and protein; and synaptic transmission and plasticity. The textbook is Fundamental Neuroscience by Zigmond, Bloom, Landis, Roberts and Squire. Supplementary readings are from other textbooks and journal articles.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 7013 Special Topics in Biotechnology

3 Credits Special topics include courses, designed to aid students in gaining extra knowledge/specialization in a subject area of their choice.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

JW 6003 Introduction to Technical Communication

3 Credits This course is an overview of the research, writing, editing and design principles of technical communication. Particular attention is paid to writing for new media. Students learn to gather, organize and present information effectively, according to audience and purpose. Interviewing skills, technical presentation skills and writing for the Web are covered.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BMS 8011 Advanced Molecular Biology Laboratory

1.5 Credits The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarity of form and function, including reproduction, development and genetics.

Corequisite(s): BMS 8013. This course is not open to students who have taken BMS 4324.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

BMS 8021 Advanced Cell Biology Laboratory

1.5 Credits Provides students with practical experience in some key cell and molecular biology techniques, including analysis of different cell types, cell differentiation, PCR, transformations and selection of cell lines with particular features. The course covers proper data handling and reporting techniques. This course is not open to students who have taken BMS 3314.

Corequisite(s): BMS 8023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

BE 6601 Introduction to Drug Delivery

1.5 Credits This course introduces drug-delivery science focusing on the historical development of delivery methods, pharmacokinetics and pharmacodynamics of drug-delivery systems, routes of administration, devices for drug delivery and, briefly, on various targeting methods and delivery of gene- and protein based therapeutics.
MG 7871 Intellectual Property for Technology and Information Managers

1.5 Credits This course focuses on the role of intellectual property (e.g., patents, trade secrets, copyrights and trademarks) as a major element in modern technology and information strategy. Relevant concepts and case studies are used, with examples representing classical and digital innovations.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 7011 Special Topics in Biotechnology

1.5 Credits Special Topics include courses covering particular subject/technology to help students to gain more knowledge in an area they may want to specialize in after graduation.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Guided Studies: up to 6 Credits

Students may optionally enroll in up to two Guided Studies courses (one per semester), which involve laboratory or literature work, as arranged with their advisers:

BT 8713 Guided Studies in Biotechnology I

3 Credits Special project (experimental, theoretical, computational, or literature search). Only one guided study course allowed per semester.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BT 8723 Guided Studies in Biotechnology II

3 Credits Special project (experimental, theoretical, computational, or literature search). Only one guided study course allowed per semester.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total: 30 Credits
Biomolecular Science

Academic advisers:
Gene DiResta, Tommy S. Lee and Bruce Garetz

Advances in biology, particularly at the cellular and molecular level, are changing the world. The basic knowledge of how nature functions to create and sustain life on earth is increasingly applied to advancing health care, to feeding an expanding world population, to producing cheap energy from renewable sources, and to cleaning the environment. Biology is the enabling science of the 21st century and is creating numerous future job-market opportunities. The BS in Biomolecular Science lies at the interface between biology and chemistry and builds upon the understanding of molecular-level biology. The curriculum also provides a strong foundation in mathematics and physics. This broadly based science education is a prerequisite for successful careers in industry and governmental laboratories and for professional or graduate studies in the biological sciences, medicine and other health-related fields.

The BS in Biomolecular Science has three options to meet diverse student needs. The Biomolecular Science, Biomedical Science Option, B.S. provides students with the fundamental knowledge and skills needed to work in the rapidly changing, bio-related industries or to pursue advanced professional or graduate degrees. The highly innovative curriculum spans the boundaries between biology and chemistry and involves considerable exposure to research.

The Biomolecular Science, Biotechnology Option, B.S. is oriented toward students who plan to work in the fast-growing biotechnology industry. The nature of the industry has changed dramatically in the past decade as technologies based on human-gene therapy and engineering take their place alongside the production of antibiotics, vaccines and hormones. This option provides a large choice of electives that meet the specific needs and interests of students.

The Biomolecular Science, Chemistry Option, B.S. combines an excellent chemistry education with a fundamental knowledge of biology, thereby preparing students to work in pharmaceutical and related companies. Graduates are prepared for positions at educational, research institutions and governmental laboratories. The research opportunities provided by this option prepare students to pursue graduate degrees in chemistry as well as degrees bordering on biology.

Goals and Objectives

The goal of the BS in Biomolecular Science is to provide the fundamental knowledge and skills to work and advance in the rapidly changing, bio-related industries or to pursue advanced professional or graduate degrees. This goal is reached with an innovative curriculum that spans the boundaries between biology and chemistry and through exposure to research. In this way, the program attracts and trains adaptable and active learners.

The BS in Biomolecular Science Option in Chemistry, with an approved selection of electives, is certified by the American Chemistry Society (ACS) to be a rigorous academic program, which is valued by potential employers and graduate schools. ACS-certified graduates are immediately eligible for society membership.

BS/MS Program

The BS/MS Option leads to the simultaneous awarding of bachelor’s and master’s degrees. Possible BS/MS combinations include a BS in biomolecular science with a MS in chemistry, bioinformatics, biotechnology, biotechnology and entrepreneurship, or biomedical engineering. The required courses for the two degrees include all courses required for individual BS and MS degrees, except for Senior Research Project II (either BMS 4924 or CM 4924); all curriculum footnotes apply. Required credits are the sum of the credits for the two degrees minus the 4 credits for Senior Research Project II. Students in this program must complete a Master’s Thesis. No Bachelor’s Thesis is required.

See the BS/MS Program description for further information.
Medical School Linkage Program

The SUNY Downstate Medical School has created a special opportunity for NYU-Poly undergraduate students to be admitted into their medical school provided the student satisfies the set of requirements put forth within the Premedical Linkage Program agreement in place between NYU-Poly and SUNY Downstate Medical School. The program will admit up to four NYU-Poly students per year and is restricted to undergraduate students who began NYU-Poly as freshmen and who have selected SUNY Downstate Medical School as their first choice medical school. Transfer students are not eligible for the program. The program is not open to students considering the SUNY Downstate MD-PhD degree.

All undergraduate majors can apply, as medical schools seek applicants from a variety of academic backgrounds. The SUNY Downstate Medical School has created a special opportunity for NYU-Poly undergraduate students to be admitted into their medical school provided the student satisfies the set of requirements put forth within the Premedical Linkage Program agreement in place between NYU-Poly and SUNY Downstate Medical School. A minimum of 128 credits is required for the BS in Biomolecular Science.
*Students registering for research must submit a written report before graduation. Students may elect to write an undergraduate thesis.

**Bachelors**

**Biomolecular Science, Biomedical Science Option, B.S.**

**Typical Course of Study for the Bachelor of Science in Biomolecular Science Option in Biomedical Science**

**Freshman Year**

**Fall Semester: 17 Credits**

**MA 1054 Calculus I with Precalculus**

*4 Credits* This course covers limits, definition of the derivative, differentiation rules for polynomial and trigonometric functions, applications of the chain rule and introduction to optimization. This Calculus I course provides an indepth review of precalculus.

*Prerequisite(s): Placement exam, MA 954, or MA 912 or equivalent. Corequisite(s): EG 1 Examination Hour
Note: course required only for specific majors in place of MA 1024/1324.*

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1014 General Chemistry I**

*4 Credits* This course covers chemical equations, chemical conservation laws, stoichiometry, thermochemistry, properties of gases, atomic structure, periodic table, chemical bonding and molecular structure. The course is required for students in the Biomolecular Science Program.

*Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1*

**CM 1101 Numerical Methods for Chemistry**

*1 Credits* This is a one-semester introductory course in numerical methods needed for BMS and CM courses. Students learn spreadsheet calculation, chart displays, curve fitting and good lab-record keeping.
Corequisite(s): CM 1014.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BMS 1004 Introduction to Cell and Molecular Biology

4 Credits The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and genetics.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 17 Credits

MA 1154 Calculus II with Precalculus

4 Credits This course covers the first and second derivative, optimization problems, antiderivatives, fundamental theorem of calculus, techniques of integration, logarithmic and exponential functions, numerical methods of integration, applications of integration, introduction to differential equations, introduction to series. This Calculus II course provides an in-depth review of precalculus.

Prerequisite(s): MA 1054. Corequisite(s): EG 1 Examination Hour
Note: course required only for specific majors in place of MA 1124/1424.

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CM 1024 General Chemistry II

4 Credits This course covers states of matter, chemical thermodynamics and equilibria, kinetics, acid-base chemistry, electrochemistry, introduction to organic chemistry, natural and synthetic polymers. The course is required for students in the Biomolecular Science Program.

Prerequisite(s): CM 1004 or CM 1014. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

BMS 2004 Introduction to Physiology

4 Credits This course continues biology fundamentals. Topics: Emphasis on evolutionary theory, phylogeny and comparative physiology including homeostasis, regulation, integration and coordination of organisms at the systems level.

Prerequisite(s): BMS 1004 or instructor's permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

CM 1032 Chemistry, the Central Science

2 Credits This is a one-semester overview course in chemistry, providing examples of important discoveries and important chemical innovators, with a strong emphasis on cutting-edge research. Field opportunities are developed to allow students to contribute to the discipline.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Sophomore Year

Fall Semester: 15 Credits

CM 2213 Organic Chemistry I

3 Credits This course covers chemistry of organic molecules: structure, nomenclature, properties and reactions of carbon compounds with emphasis on aliphatic compounds. It also introduces reaction mechanisms and stereochemistry.
Prerequisite(s): CM 1004 or CM 1024. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2211 Organic Chemistry Laboratory I

1 Credits This Laboratory course teaches students how to prepare, isolate and purify typical organic compounds. Experiments illustrate basic techniques. Lab fee required.

Pre/Co-requisite: CM 2213.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

BMS 2512 Biostatistics

2 Credits The course introduces statistical methods used in biology, including probability, statistical distributions, regression, correlation and tests.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 5040 Chemical Laboratory Safety

0 Credits This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.
Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16.5 Credits

**CM 2223 Organic Chemistry II**

*3 Credits* This course continues CM 2213 and emphasizes finding the principles of organic chemistry in industrial practice and biochemical mechanisms. It introduces instrumental methods of analysis and identification.

*Prerequisite(s):* CM 2213.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 2221 Organic Chemistry Laboratory II**

*1 Credits* This laboratory stresses complex preparation, purification, characterization and identification of organic compounds by chemical and physical means. It introduces instrumental methods of analysis and identification. Lab fee required.

*Prerequisite(s):* CM 2211; Pre/Co-requisite: CM 2223.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**PH 2023 Electricity, Magnetism and Fluids**

*3 Credits* This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

*Prerequisite(s):* PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2021 Introductory Physics Laboratory I**

*0.5 Credits* This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

*Prerequisite(s):* PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**CM 2614 Physical Chemistry I**
4 Credits This course covers chemical thermodynamics with applications to solutions, phase and chemical equilibria. Molecular motion and transport properties are also covered.

Prerequisite(s): CM 1004 or CM 1024 and MA 1124 or MA 1154 and PH 1013.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2102 Molecular Modeling in Chemistry

2 Credits This one-semester introductory course covers computer modeling of organic compounds. Students learn to use Chem Draw and Chem3D, standard applications in chemistry.

Prerequisite(s): CM 1101 and CM 2213; Corequisite(s): CM 2223.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 17.5 Credits

BMS 3114 Genetics

4 Credits The course covers the genetics of bacteria, viruses and high organisms. Emphasis is on both the genetic and biochemical analyses of gene replication, heredity, mutation, recombination and gene expression. Included are comparisons of prokaryotic and eukaryotic genetics and regulation. Laboratory techniques are used to study genetic phenomena in prokaryotes, eukaryotes and viruses. The course emphasizes modern approaches to genetic research. A Lab fee is required.

Prerequisite(s): BMS 1004. Corequisite(s): CM 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics: temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II
0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CM 3314 Biochemistry I

4 Credits This course surveys modern biochemistry and emphasizes current areas of research. Also covered are structure-function relationships in proteins; enzymes and their mechanisms of action; bioenergetics principles and energy production; and biochemical theories and techniques.

Prerequisite(s): CM 2213 and CM 2614 or instructor’s permission.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16 Credits

BMS 3314 Advanced Cell and Molecular Biology I

4 Credits This first semester of a year-long course explores the molecular basis of cell function and current trends in molecular biology. The lab component is a year-long project to locate, characterize, clone and express a gene. A Lab fee is required.

Prerequisite(s): CM 3314 and CM 2223 (see BMS 4324 for second semester).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CM 3324 Biochemistry II

4 Credits This course continues Biochemistry I. It covers principles of intermediary metabolism: energetic membrane structure and transport; structure and function of DNA and RNA; principles of molecular biology; the immune system; and hormonal regulation and cancer.

Prerequisite(s): CM 3314 or instructor’s permission.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 3514 Analytical Chemistry

4 Credits This course covers theories and applications of instrumentation techniques in modern analytical chemistry, including spectroscopy (UVVIS absorption, infrared absorption, fluorescence, Raman scattering, nuclear magnetic resonance), chromatography (gas, liquid) and other techniques (mass spectroscopy, electrophoresis). The accompanying laboratory part focuses on practical skills.

Prerequisite(s): CM 2614.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
CM 4011 Information Sources for the Chemical Sciences

1 Credits This hands-on course introduces methods and tools for searching. It includes both electronic (CD-ROM and online) and print databases. Students may emphasize topics related to their research.

Note: Required of all BS students in biomolecular science.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

BMS 4914 Undergraduate Research in Biomolecular Science

4 Credits The course investigates problems in biology under faculty supervision. Library research, experimental studies and written reports are required. A Lab fee is required.

Prerequisite(s): Senior status or adviser’s approval, CM 4011 and CM 5040.

BMS 4324 Advanced Cell and Molecular Biology II

4 Credits This is the second semester of a year-long course that examines the molecular basis of cell function and current trends in molecular biology. The lab component is a year-long project to locate, characterize, clone and express a gene. Lab fee required.

Prerequisite(s): BMS 3314.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
- Elective 4 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 14 Credits

BMS 4924 Undergraduate Research in Biomolecular Science

4 Credits The course investigates problems in biology under faculty supervision. Library research, experimental studies and written reports are required. A Lab fee is required.

Prerequisite(s): Senior status or adviser’s approval, CM 4011 and CM 5040.
• BMS 48XX Topics in Biology 4 Credits
• Elective 3 Credits
• Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Students placed by examination or an adviser into MA 914 must defer registration for MA 1054 or MA 1024.

2 Students placed by examination or an adviser into EN 1080W must subsequently register for EW 1013.

3 Approved Humanities and Social Sciences electives are courses with the following prefixes: AH, AN, CAM, EN, MD, MU, PL, PS, HI, STS, SEG or URB. One course must be at the 3xxx/4xxx level. At least one elective must be a writing-intensive course labeled by “W.”

4 Electives for the Option in Biomedical Sciences: Two courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- LS 2314 Organismal Physiology 4 Credits
- BMS 3214 Microbiology 4 Credits
- BMS 4414 Biophysics 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 9443 Tissue Engineering 4 Credits
- BE 6603 Intro to Drug Delivery 4 Credits
- BE 6703 Materials in Medicine 4 Credits

5 Electives for the Option in Biotechnology: Three courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- BMS 4324 Advanced Cell and Molecular Biology II 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 4314 Biomaterials 4 Credits
- CM 4413 Polymer Science 3 Credits
- CM 9463 Recombinant DNA Technology 3 Credits
- 3 Credits BE 6253 Biosensors 3 Credits
- CM 9053 Enzyme Catalysis in Organic Synthesis 3 Credits
- BI 7513 Chemical Foundation for Bioinformatics 3 Credits
- BI 7533 Bioinformatics I: Sequence Analysis 3 Credits
- BI 7543 Bioinformatics II: Protein Structure 3 Credits
- BT 6013 Biotechnology and the Pharmaceutical Industry 3 Credits
- BT 6023 Biotechnology and Health Care 3 Credits

6 Electives for the Option in Chemistry: Two courses must be advanced undergraduate CM, BMS or CBE courses, or graduate CM courses, or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may
be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

NOTES:
All laboratory courses in chemistry require a breakage deposit. The department usually does not grant transfer credits to students who, while registered at NYU-Poly, take biology or chemistry courses at other schools.

Biomolecular Science, Biotechnology Option, B.S.

Typical Course of Study for the Bachelor of Science in Biomolecular Science Option in Biotechnology

Freshman Year

Fall Semester: 17 Credits

MA 1054 Calculus I with Precalculus

4 Credits This course covers limits, definition of the derivative, differentiation rules for polynomial and trigonometric functions, applications of the chain rule and introduction to optimization. This Calculus I course provides an indepth review of precalculus.

Prerequisite(s): Placement exam, MA 954, or MA 912 or equivalent. Corequisite(s): EG 1 Examination Hour
Note: course required only for specific majors in place of MA 1024/1324.

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1014 General Chemistry I

4 Credits This course covers chemical equations, chemical conservation laws, stoichiometry, thermochemistry, properties of gases, atomic structure, periodic table, chemical bonding and molecular structure. The course is required for students in the Biomolecular Science Program.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

CM 1101 Numerical Methods for Chemistry

1 Credits This is a one-semester introductory course in numerical methods needed for BMS and CM courses. Students learn spreadsheet calculation, chart displays, curve fitting and good lab-record keeping.
Corequisite(s): CM 1014.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BMS 1004 Introduction to Cell and Molecular Biology**

*4 Credits* The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and genetics.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Spring Semester: 17 Credits**

**MA 1154 Calculus II with Precalculus**

*4 Credits* This course covers the first and second derivative, optimization problems, antiderivatives, fundamental theorem of calculus, techniques of integration, logarithmic and exponential functions, numerical methods of integration, applications of integration, introduction to differential equations, introduction to series. This Calculus II course provides an in-depth review of precalculus.

Prerequisite(s): MA 1054. Corequisite(s): EG 1 Examination Hour
Note: course required only for specific majors in place of MA 1124/1424.

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CM 1024 General Chemistry II

4 Credits This course covers states of matter, chemical thermodynamics and equilibria, kinetics, acid-base chemistry, electrochemistry, introduction to organic chemistry, natural and synthetic polymers. The course is required for students in the Biomolecular Science Program.

Prerequisite(s): CM 1004 or CM 1014. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

BMS 2004 Introduction to Physiology

4 Credits This course continues biology fundamentals. Topics: Emphasis on evolutionary theory, phylogeny and comparative physiology including homeostasis, regulation, integration and coordination of organisms at the systems level.

Prerequisite(s): BMS 1004 or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

CM 1032 Chemistry, the Central Science

2 Credits This is a one-semester overview course in chemistry, providing examples of important discoveries and important chemical innovators, with a strong emphasis on cutting-edge research. Field opportunities are developed to allow students to contribute to the discipline.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Sophomore Year

Fall Semester: 15 Credits

CM 2213 Organic Chemistry I

3 Credits This course covers chemistry of organic molecules: structure, nomenclature, properties and reactions of carbon compounds with emphasis on aliphatic compounds. It also introduces reaction mechanisms and stereochemistry.
Prerequisite(s): CM 1004 or CM 1024. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2211 Organic Chemistry Laboratory I

1 Credits This Laboratory course teaches students how to prepare, isolate and purify typical organic compounds. Experiments illustrate basic techniques. Lab fee required.
Pre/Co-requisite: CM 2213.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)
Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.
Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

BMS 2512 Biostatistics

2 Credits The course introduces statistical methods used in biology, including probability, statistical distributions, regression, correlation and tests.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 5040 Chemical Laboratory Safety

0 Credits This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.
CM 2223 Organic Chemistry II

3 Credits This course continues CM 2213 and emphasizes finding the principles of organic chemistry in industrial practice and biochemical mechanisms. It introduces instrumental methods of analysis and identification.

Prerequisite(s): CM 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2221 Organic Chemistry Laboratory II

1 Credits This laboratory stresses complex preparation, purification, characterization and identification of organic compounds by chemical and physical means. It introduces instrumental methods of analysis and identification. Lab fee required.

Prerequisite(s): CM 2211; Pre/Co-requisite: CM 2223.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CM 2614 Physical Chemistry I
4 Credits This course covers chemical thermodynamics with applications to solutions, phase and chemical equilibria. Molecular motion and transport properties are also covered.

Prerequisite(s): CM 1004 or CM 1024 and MA 1124 or MA 1154 and PH 1013.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2102 Molecular Modeling in Chemistry

2 Credits This one-semester introductory course covers computer modeling of organic compounds. Students learn to use ChemDraw and Chem3D, standard applications in chemistry.

Prerequisite(s): CM 1101 and CM 2213; Corequisite(s): CM 2223.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 17.5 Credits

BMS 3114 Genetics

4 Credits The course covers the genetics of bacteria, viruses and high organisms. Emphasis is on both the genetic and biochemical analyses of gene replication, heredity, mutation, recombination and gene expression. Included are comparisons of prokaryotic and eukaryotic genetics and regulation. Laboratory techniques are used to study genetic phenomena in prokaryotes, eukaryotes and viruses. The course emphasizes modern approaches to genetic research. A Lab fee is required.

Prerequisite(s): BMS 1004. Corequisite(s): CM 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II
0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CM 3314 Biochemistry I

4 Credits This course surveys modern biochemistry and emphasizes current areas of research. Also covered are structure-function relationships in proteins; enzymes and their mechanisms of action; bioenergetics principles and energy production; and biochemical theories and techniques.

Prerequisite(s): CM 2213 and CM 2614 or instructor’s permission.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16 Credits

BMS 3314 Advanced Cell and Molecular Biology I

4 Credits This first semester of a year-long course explores the molecular basis of cell function and current trends in molecular biology. The lab component is a year-long project to locate, characterize, clone and express a gene. A Lab fee is required.

Prerequisite(s): CM 3314 and CM 2223 (see BMS 4324 for second semester).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CM 3324 Biochemistry II

4 Credits This course continues Biochemistry I. It covers principles of intermediary metabolism: energetic membrane structure and transport; structure and function of DNA and RNA; principles of molecular biology; the immune system; and hormonal regulation and cancer.

Prerequisite(s): CM 3314 or instructor’s permission.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 3514 Analytical Chemistry

4 Credits This course covers theories and applications of instrumentation techniques in modern analytical chemistry, including spectroscopy (UVVIS absorption, infrared absorption, fluorescence, Raman scattering, nuclear magnetic resonance), chromatography (gas, liquid) and other techniques (mass spectroscopy, electrophoresis). The accompanying laboratory part focuses on practical skills.

Prerequisite(s): CM 2614.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
CM 4011 Information Sources for the Chemical Sciences

1 Credits This hands-on course introduces methods and tools for searching. It includes both electronic (CD-ROM and online) and print databases. Students may emphasize topics related to their research.

Note: Required of all BS students in biomolecular science.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

BMS 4914 Undergraduate Research in Biomolecular Science

4 Credits The course investigates problems in biology under faculty supervision. Library research, experimental studies and written reports are required. A Lab fee is required.

Prerequisite(s): Senior status or adviser’s approval, CM 4011 and CM 5040.

- Elective 4 Credits
- Elective 4 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 14 Credits

BMS 4924 Undergraduate Research in Biomolecular Science

4 Credits The course investigates problems in biology under faculty supervision. Library research, experimental studies and written reports are required. A Lab fee is required.

Prerequisite(s): Senior status or adviser’s approval, CM 4011 and CM 5040.

- Elective 4 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128
Footnotes

1 Students placed by examination or an adviser into MA 914 must defer registration for MA 1054 or MA 1024.

2 Students placed by examination or an adviser into EN 1080W must subsequently register for EW 1013.

3 Approved Humanities and Social Sciences electives are courses with the following prefixes: AH, AN, CAM, EN, MD, MU, PL, PS, HI, STS, SEG or URB. One course must be at the 3xx/4xxx level. At least one elective must be a writing-intensive course labeled by “W.”

4 Electives for the Option in Biomedical Sciences: Two courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- LS 2314 Organismal Physiology 4 Credits
- BMS 3214 Microbiology 4 Credits
- BMS 4414 Biophysics 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 9443 Tissue Engineering 4 Credits
- BE 6603 Intro to Drug Delivery 4 Credits
- BE 6703 Materials in Medicine 4 Credits

5 Electives for the Option in Biotechnology: Three courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- BMS 4324 Advanced Cell and Molecular Biology II 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 4314 Biomaterials 4 Credits
- CM 4413 Polymer Science 3 Credits
- CM 9463 Recombinant DNA Technology 3 Credits
- 3 CreditsBE 6253 Biosensors 3 Credits
- CM 9053 Enzyme Catalysis in Organic Synthesis 3 Credits
- BI 7513 Chemical Foundation for Bioinformatics 3 Credits
- BI 7533 Bioinformatics I: Sequence Analysis 3 Credits
- BI 7543 Bioinformatics II: Protein Structure 3 Credits
- BT 6013 Biotechnology and the Pharmaceutical Industry 3 Credits
- BT 6023 Biotechnology and Health Care 3 Credits

6 Electives for the Option in Chemistry: Two courses must be advanced undergraduate CM, BMS or CBE courses, or graduate CM courses, or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

NOTES:
All laboratory courses in chemistry require a breakage deposit. The department usually does not grant transfer credits to students who, while registered at NYU-Poly, take biology or chemistry courses at other schools.

Biomolecular Science, Chemistry Option, B.S.
Typical Course of Study for the Bachelor of Science in Biomolecular Science Option in Chemistry

Freshman Year

Fall Semester: 17 Credits

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s):* Placement exam or MA 912 or MA 914.

*Corequisite(s):* EG 1 Examination Hour

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1014 General Chemistry I**

*4 Credits* This course covers chemical equations, chemical conservation laws, stoichiometry, thermochemistry, properties of gases, atomic structure, periodic table, chemical bonding and molecular structure. The course is required for students in the Biomolecular Science Program.

*Corequisite(s):* EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**CM 1101 Numerical Methods for Chemistry**

*1 Credit* This is a one-semester introductory course in numerical methods needed for BMS and CM courses. Students learn spreadsheet calculation, chart displays, curve fitting and good lab-record keeping.

*Corequisite(s):* CM 1014

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BMS 1004 Introduction to Cell and Molecular Biology**

*4 Credits* The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and
EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 17 Credits

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1024 General Chemistry II

4 Credits This course covers states of matter, chemical thermodynamics and equilibria, kinetics, acid-base chemistry, electrochemistry, introduction to organic chemistry, natural and synthetic polymers. The course is required for students in the Biomolecular Science Program.
Prerequisite(s): CM 1004 or CM 1014. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

BMS 2004 Introduction to Physiology

4 Credits This course continues biology fundamentals. Topics: Emphasis on evolutionary theory, phylogeny and comparative physiology including homeostasis, regulation, integration and coordination of organisms at the systems level.

Prerequisite(s): BMS 1004 or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

CM 1032 Chemistry, the Central Science

2 Credits This is a one-semester overview course in chemistry, providing examples of important discoveries and important chemical innovators, with a strong emphasis on cutting-edge research. Field opportunities are developed to allow students to contribute to the discipline.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Sophomore Year

Fall Semester: 15 Credits

CM 2213 Organic Chemistry I

3 Credits This course covers chemistry of organic molecules: structure, nomenclature, properties and reactions of carbon compounds with emphasis on aliphatic compounds. It also introduces reaction mechanisms and stereochemistry.

Prerequisite(s): CM 1004 or CM 1024. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2211 Organic Chemistry Laboratory I
1 Credits This Laboratory course teaches students how to prepare, isolate and purify typical organic compounds. Experiments illustrate basic techniques. Lab fee required.

Pre/Co-requisite: CM 2213.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 5040 Chemical Laboratory Safety

0 Credits This course discusses problems of health and safety in chemical laboratories, including how to work safely with dangerous chemicals. This course must be completed by graduate and undergraduate chemistry students before they begin laboratory research.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  • Humanities and Social Sciences Elective 3 Credits
  • Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15.5 Credits

CM 2223 Organic Chemistry II

3 Credits This course continues CM 2213 and emphasizes finding the principles of organic chemistry in industrial practice and biochemical mechanisms. It introduces instrumental methods of analysis and identification.

Prerequisite(s): CM 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CM 2221 Organic Chemistry Laboratory II

1 Credits This laboratory stresses complex preparation, purification, characterization and identification of organic compounds by chemical and physical means. It introduces instrumental methods of analysis and identification. Lab fee required.

Prerequisite(s): CM 2211; Pre/Co-requisite: CM 2223.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CM 2614 Physical Chemistry I

4 Credits This course covers chemical thermodynamics with applications to solutions, phase and chemical equilibria. Molecular motion and transport properties are also covered.

Prerequisite(s): CM 1004 or CM 1024 and MA 1124 or MA 1154 and PH 1013.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2102 Molecular Modeling in Chemistry

2 Credits This one-semester introductory course covers computer modeling of organic compounds. Students learn to use Chem Draw and Chem3D, standard applications in chemistry.

Prerequisite(s): CM 1101 and CM 2213; Corequisite(s): CM 2223.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Junior Year

Fall Semester: 17.5 Credits

CM 4413 Polymer Science

3 Credits This course provides a broad perspective of polymer science and its application in everyday life. The course has three major components: a survey of polymers, polymer synthesis and aspects of polymer physics.

Prerequisite(s): CM 2213 and CM 2614.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CM 3314 Biochemistry I

4 Credits This course surveys modern biochemistry and emphasizes current areas of research. Also covered are structure-function relationships in proteins; enzymes and their mechanisms of action; bioenergetics principles and energy production; and
biochemical theories and techniques.

**Prerequisite(s): CM 2213 and CM 2614 or instructor’s permission.**

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### CBE 2124 Analysis of Chemical and Biomolecular Processes

*4 Credits* This course prepares students to formulate and solve material and energy balances on chemical and biomolecular process systems and lays the foundation for subsequent courses in thermodynamics, unit operations, kinetics and process dynamics, and control. The course introduces the fundamental engineering approach to problem solving: breaking down a process into its components, establishing the relations between known and unknown process variables, assembling the information needed to solve for the unknowns and, finally, obtaining the solution using relevant computational methods.

**Prerequisite(s): CM 1014 and MA 1024.**

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Humanities and Social Sciences Elective *3 Credits*  

### Spring Semester: 15 Credits

#### CM 3324 Biochemistry II

*4 Credits* This course continues Biochemistry I. It covers principles of intermediary metabolism: energetic membrane structure and transport; structure and function of DNA and RNA; principles of molecular biology; the immune system; and hormonal regulation and cancer.

**Prerequisite(s): CM 3314 or instructor’s permission.**

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

#### CM 3514 Analytical Chemistry

*4 Credits* This course covers theories and applications of instrumentation techniques in modern analytical chemistry, including spectroscopy (UVVIS absorption, infrared absorption, fluorescence, Raman scattering, nuclear magnetic resonance), chromatography (gas, liquid) and other techniques (mass spectroscopy, electrophoresis). The accompanying laboratory part focuses on practical skills.

**Prerequisite(s): CM 2614.**

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

#### CM 4011 Information Sources for the Chemical Sciences

*1 Credits* This hands-on course introduces methods and tools for searching. It includes both electronic (CD-ROM and online) and print databases. Students may emphasize topics related to their research.

**Note:** *Required of all BS students in biomolecular science.*

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Senior Year

Fall Semester: 16 Credits

CM 4914 Undergraduate Research in Chemistry

4 Credits In this course, students conduct original investigations guided by staff members. Careful literature research is required before laboratory work starts. Continued reference to chemical literature is expected as well as active participation in conferences and seminars, both of which are scheduled as work progresses. A written report is required. Full-time students are expected to register for 8 credits of thesis during senior year. A research (lab) fee is required.

Prerequisite(s): CM 4011 and CM 5040.

- Elective 3 Credits 6
- Elective 3 Credits 6
- Humanities and Social Sciences Elective 3 Credits 3
- Humanities and Social Sciences Elective 3 Credits 3

Spring Semester: 15 Credits

CM 4914 Undergraduate Research in Chemistry

4 Credits In this course, students conduct original investigations guided by staff members. Careful literature research is required before laboratory work starts. Continued reference to chemical literature is expected as well as active participation in conferences and seminars, both of which are scheduled as work progresses. A written report is required. Full-time students are expected to register for 8 credits of thesis during senior year. A research (lab) fee is required.

Prerequisite(s): CM 4011 and CM 5040.

- Elective 4 Credits 6
- Elective 4 Credits 6
- Humanities and Social Sciences Elective 3 Credits 3

Total credits required for graduation: 128

Footnotes
1 Students placed by examination or an adviser into MA 914 must defer registration for MA 1054 or MA 1024.

2 Students placed by examination or an adviser into EN 1080W must subsequently register for EW 1013.

3 Approved Humanities and Social Sciences electives are courses with the following prefixes: AH, AN, CAM, EN, MD, MU, PL, PS, HI, STS, SEG or URB. One course must be at the 3xxx/4xxx level. At least one elective must be a writing-intensive course labeled by “W.”

4 Electives for the Option in Biomedical Sciences: Two courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- LS 2314 Organismal Physiology 4 Credits
- BMS 3214 Microbiology 4 Credits
- BMS 4414 Biophysics 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 9443 Tissue Engineering 4 Credits
- BE 6603 Intro to Drug Delivery 4 Credits
- BE 6703 Materials in Medicine 4 Credits

5 Electives for the Option in Biotechnology: Three courses must be chosen from the following list or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

- CBE 2124 Analysis of Chemical and Biomolecular Processes 4 Credits
- BMS 4324 Advanced Cell and Molecular Biology II 4 Credits
- BMS 48XX Topics in Biology 4 Credits
- CM 4314 Biomaterials 4 Credits
- CM 4413 Polymer Science 3 Credits
- CM 9463 Recombinant DNA Technology 3 Credits
- 3 Credits BE 6253 Biosensors 3 Credits
- CM 9053 Enzyme Catalysis in Organic Synthesis 3 Credits
- BI 7513 Chemical Foundation for Bioinformatics 3 Credits
- BI 7533 Bioinformatics I: Sequence Analysis 3 Credits
- BI 7543 Bioinformatics II: Protein Structure 3 Credits
- BT 6013 Biotechnology and the Pharmaceutical Industry 3 Credits
- BT 6023 Biotechnology and Health Care 3 Credits

6 Electives for the Option in Chemistry: Two courses must be advanced undergraduate CM, BMS or CBE courses, or graduate CM courses, or must be approved by an adviser, subject to the courses being offered in a given semester. Graduate courses may be taken only by students with junior standing and a C+ average or better, unless otherwise approved by the adviser. The remaining courses are free electives.

NOTES:
All laboratory courses in chemistry require a breakage deposit. The department usually does not grant transfer credits to students who, while registered at NYU-Poly, take biology or chemistry courses at other schools.

Biomedical Engineering

Academic Director: Gene R. DiResta
Goals and Objectives

The goal of the MS in Biomedical Engineering program is to give students an in-depth, advanced education that provides them with the analytical tools to perform fundamental and applied research in biomedical engineering. Alternatively, students gain the requisite technical knowledge to apply to management, marketing, sales and other entrepreneurial activities related to biomedical engineering. Specific objectives include the following:

- Enrolling students who come from many disciplines and bring different skill sets to solve a broad range of biomedical-engineering problems. The program accommodates students with a BS or a more advanced degree in chemical engineering, mechanical engineering, electrical engineering, computer science, computer engineering, physics, chemistry, biology, premedical, bioengineering and biotechnology.
- Providing students with a cutting-edge program that integrates quantitative-engineering skills with biological and medical sciences. Students acquire the skills to engage in technological innovations that give people longer, healthier and more productive lives.
- Merging the leadership and talents found at the Institute in chemistry, biology, engineering, computer science, mathematics, management and humanities with the expertise in medical sciences at the NYU School of Medicine, NYU School of Dentistry, NYU Courant Institute and SUNY Downstate Medical Center.
- Giving students an opportunity to focus on a wide range of contemporary topics critical to biomedical engineering. Students choose courses in topics that include biomedical instrumentation, biomaterials, drug delivery, orthopedic biomechanics and devices, protein engineering, anatomy and physiology, biochemistry, immunology, bioinformatics, systems analysis and mathematics, medical imaging and material science.
- Giving students the option of doing research in laboratories at NYU-Poly, NYU Medical and Dental Schools, NYU-affiliated hospitals or SUNY Downstate Medical Center. Students may also substitute research credits with course electives.

In the years ahead, health and human productivity can be improved vastly through major advances in medicine. The successful, seamless integration of biology and modern engineering will drive those advances. Scientists anticipate future breakthroughs ranging from the design of drugs customized to an individual’s genome to the perfection of artificial implantable organs. Aggressive and intelligent integration of engineering with the biological and medical sciences will hasten the realization of these and other innovations, leading to longer, healthier and more productive lives. Scientists now can visualize internal structures with a level of clarity thought impossible only a decade ago. With the improved diagnosis that comes from these advances and those that follow, science will discover further treatments.

Today, miniature devices can be manipulated through endoscopes, making it possible to perform minimally invasive surgery that reduces patient trauma. In the future, the micro-fabrication of biomedical devices at Polytechnic and elsewhere will enhance surgical technology and increase the functionality and quality of life of the physically-impaired in applications ranging from congenital defects to improving major organ function (heart, kidneys and liver). Other areas show similar promise. Breakthroughs in human tissue research point to the possibilities of replacing damaged or diseased bone, cartilage and other tissues with newly engineered materials. Biodegradable materials will substitute for permanent implants to allow tissue recovery followed by clearance of the degraded implant material. New imaging modalities are emerging that provide advanced information and monitoring capabilities. Wireless technology will integrate medical devices and home-care systems with primary healthcare providers, and facilitate the storage and retrieval of patient data. Over the coming decades, these and other extraordinary developments will dramatically affect lives.

By merging Polytechnic’s leadership and talents in its programs in engineering, chemistry, biology, computer science, management and humanities programs with NYU’s and SUNY Downstate’s expertise in medical sciences, the Polytechnic Biomedical Engineering Program provides students with a broad range of research opportunities. The partnership between Polytechnic, NYU and SUNY Downstate is dedicated to this new model of biomedical education and to developing students with practical and fundamental knowledge. Students move freely among the institutions, taking advantage of faculty and associated research programs. Polytechnic’s goal is to provide the best in-classroom and laboratory education to develop the skills to succeed in a wide range of opportunities after graduation.
A Perfect Formula for a Successful Biomedical Engineering Program

Polytechnic’s Master of Science in Biomedical Engineering program originated in a strategic alliance between the Institute and SUNY Downstate Medical Center. The two institutions developed extensive research interests with complementary technological expertise. Common areas of scientific investigation include Biosensors, Telemetry, Neurorobotics, Optical Imaging, Biodegradable Biomedical Materials, Drug Delivery, Protein and Glycolipid Therapeutics, Tissue Engineering and Microchip Sensors. These collaborations remain a vital program component. With the merging of NYU and the Institute, research opportunities are expanded dramatically.

Full- and Part-time Students

Students entering this master’s program may wish to complete their degree rapidly by taking a full course load, or proceed at a slower pace if they are working professionals who have other full- or part-time commitments. The curriculum structure and class schedule accommodates part-time and full-time students. Thus, most 3-credit courses are given as two-and-a-half hour lectures one evening a week during a 15-week semester. Evening research opportunities are available.

Admission and Degree Requirements

The Master of Science degree is for students from various backgrounds seeking the in-depth knowledge and quantitative skills required for biomedical engineering. Students may apply to the master’s program if they have one or more of the following: (1) BS or a more advanced degree in any engineering discipline, (2) BS or more advanced degree in mathematics or (3) BS or more advanced degree in any of the natural sciences. Entering students should have a minimum of two semesters of college-level calculus (see Polytechnic course descriptions for mathematics courses MA 1024 and MA 1124), two semesters of college-level physics (see Polytechnic course descriptions for physics, PH 1013, PH 2023 PH 2033), two semesters of college-level chemistry (see Polytechnic course descriptions for Chemistry, CM 1014 and CM 1024). For students focusing on the Biomaterials track, additional background in organic chemistry and biochemistry is desirable. For those choosing the Medical Imaging or Bioinstrumentation track, additional advanced mathematics courses (e.g., Polytechnic courses MA 2132, ordinary differential equations; and MA 2112/MA 2122 multi-variable calculus) are recommended. Students lacking undergraduate courses described above may be admitted contingent upon the student’s satisfying courses necessary for success in the program. To help students raise their level of knowledge in chemical and biochemical concepts specific to advanced courses in the Medical Imaging or Bioinstrumentation tracks, the program developed BE 6653 Principles of Chemical and Biochemical Systems for Engineers. A program adviser reviews with successful applicants what undergraduate courses, if any, they must take. Such courses do not count toward the master’s degree.

Advanced Certificate Programs

The Biomedical Engineering Program administers two certificate programs: Biomedical Materials Graduate Certificate and Bioinstrumentation Graduate Certificate. The Advanced Certificates in Biomedical Materials and Bioinstrumentation are for students from various backgrounds seeking in-depth knowledge in a specialty within biomedical engineering. Students may apply to the certificate program if they have one or more of the following:

(1) BS or a more advanced degree in any engineering discipline, (2) BS or more advanced degree in mathematics and/or (3) BS or more advanced degree in any natural science. The program adviser reviews with successful applicants prerequisites that may be required for successful completion of certificate courses. A certificate program requires four courses (12 credits) that are for working professionals seeking advanced training in a specific area within the Biomedical Engineering Program. Students must achieve an average of B or better in all graduate courses. Upon completion of a sequence with an average grade of B or better, students are issued Advanced Certificates. Those who choose to work toward the master’s degree in biomedical engineering are able, upon admission, to apply all courses taken toward a certificate to fulfill the degree program. Additional information may be
obtained from the department. To satisfy the requirement for the Advanced Certificate in Biomedical Materials, students must complete a minimum of 12 credits.

**Graduate Certificate**

**Bioinstrumentation Graduate Certificate**

Certificate Requirements for an Advanced Certificate in Bioinstrumentation

**Required:**

**BE 6703 Materials in Medicine**

3 Credits The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

*Prerequisite(s):* Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6203 Biomedical Imaging I**

3 Credits This course introduces the physics, instrumentation and signal-processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging and magnetic resonance imaging.

*Prerequisite(s):* Undergraduate-level courses in multivariable calculus, physics, and probability. Corequisite(s): undergraduate or graduate level signals and systems. Open to graduate students and upper-level UG students. Signals and systems (EE 3054, preferred but not required).

Also listed under: EL 5823.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6503 Biomedical Instrumentation**

3 Credits This course, is for graduate students in the Bioengineering Program, introduces the principles of commonly used instruments in neuroscience research, particularly in electrophysiology and imaging. The course discusses theoretical considerations in choosing techniques as well as practical issues in selecting materials and designing experiments.
Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6253 Biosensors**

*3 Credits* This course discusses various biosensors, which consist of bio-recognition systems, typically enzymes or binding proteins such as antibodies immobilized onto the surface of physico-chemical transducers. Immuno-sensors, which use antibodies as their biorecognition system, are also discussed. Other bio-recognition systems covered are nucleic acids, bacteria and whole tissues of higher organisms. Specific interactions between the target analyte and the complementary bio-recognition layer that undergoes a physicochemical change are ultimately detected and measured by the transducer. Various transducers, which can take many forms depending upon the parameters measured (electrochemical, optical, mass and thermal changes) are also covered.

Prerequisite(s): CM 1004 General Chemistry for Engineers, CM 2213 Organic Chemistry I, CM 2614 Physical Chemistry I, and CM 9413 Biochemistry I

**Biomedical Materials Graduate Certificate**

Certificate Requirements for an Advanced Certificate in Biomedical Materials

**Required:**

**BE 6703 Materials in Medicine**

*3 Credits* The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6723 Natural Polymers and Materials**

*3 Credits* This course introduces natural and biomimetic polymers with an interdisciplinary view of biology, chemistry and macromolecular science. Topics: Natural building blocks and methods by which nature carries out polymer synthesis and modification reactions; DNA; structural proteins; plant proteins; polysaccharides; polyesters; biosurfactants; polymers built from
natural monomers and a wide variety of renewable resources; uses of polymers as fibers, films, rheological modifiers, flocculants, foams, adhesives and membranes; special applications of natural polymers in medicine and as biodegradable plastics.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

One of the following courses:

CM 7723 Synthesis of Macromolecules

3 Credits This course covers organic aspects, including chemistry of monomer and polymer formation; modern mechanistic analyses of reactions; stereochemistry of polymer structures; forces of stereo regulation; condensation, free radical (bulk, suspension, emulsion, solution), ionic, ring-opening and non-classical polymerization reactions.

Prerequisite(s): Undergraduate organic chemistry or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 7813 Characterization of Macromolecules

3 Credits This course covers characterization methods for linear-chain polymer and macromolecules in solution such as static and dynamic light scattering, osmometry, size exclusion chromatography, viscometry. Also covered are characterization methods for macromolecules in solid state such as crystallography and mechanical and thermal analysis.

Prerequisite(s): Undergraduate physical chemistry or adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 7263 Engineering Physics of Synthetic and Biological Macromolecules

3 Credits This course covers physical states of synthetic and biological macromolecules; sizes, shapes and ordered structures; dynamics of nonentangled and entangled chains; amorphous and crystalline solids, networks and gels; mechanical, dielectric and optical properties; and viscoelasticity and fracture.

Prerequisite(s): CBE 4173 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

One of the following courses:

BT 6033 Biosensors and Biochips

3 Credits Biosensors and biochips is one of the most exciting, complex and fast-growing areas of biotechnology today—the interface between biotechnology, nanotechnology and micro-electronics industries. The course covers both conventional biosensors based on whole cells, nucleic acids, antibodies and enzymes (e.g., enzymatic glucose monitoring) as well as new and emerging technologies related to designing, fabricating and applying multi-array biochips and micro-fluidic systems (lab-on-the-
The goal is to familiarize students with basic principles of biosensors design and applications. The course also covers practical applications of this technology in health care, medical diagnostics, defense and other areas.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6253 Biosensors

3 Credits This course discusses various biosensors, which consist of bio-recognition systems, typically enzymes or binding proteins such as antibodies immobilized onto the surface of physico-chemical transducers. Immuno-sensors, which use antibodies as their biorecognition system, are also discussed. Other bio-recognition systems covered are nucleic acids, bacteria and whole tissues of higher organisms. Specific interactions between the target analyte and the complementary bio-recognition layer that undergoes a physicochemical change are ultimately detected and measured by the transducer. Various transducers, which can take many forms depending upon the parameters measured (electrochemical, optical, mass and thermal changes) are also covered.

Prerequisite(s): CM 1004 General Chemistry for Engineers, CM 2213 Organic Chemistry I, CM 2614 Physical Chemistry I, and CM 9413 Biochemistry I

BE 6603 Intro to Drug Delivery

3 Credits The course provides an integrated approach to the basic and clinical science of drug delivery. Topics: the history drug delivery; kinds of drugs to be delivered, including genes and proteins; various targeting mechanisms; transport phenomena and thermodynamic concepts; pharmacokinetics of drug delivery, polymeric drug-delivery systems; various devices developed for controlled delivery.

Prerequisite(s): calculus with ordinary diff. eq.; undergraduate courses in biology, chemistry and physiology (minimum grade B).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6753 Orthopaedic Biomechanics and Biomaterials

3 Credits The course provides fundamental knowledge of the relevant background science, theory, practice and materials required to provide modern orthopedic and trauma care. Students learn about biomaterials used in orthopedics and how materials engineering has made them increasingly sophisticated. The course covers important clinical applications as well as fundamental concepts in biomechanics of bone and other tissues; materials used; wear and corrosion during use; dental implants; joint-replacement devices; stress-strain analysis, beam theory; introduction to finite element analysis design for prosthesis; and more.

Prerequisite(s): Calculus with ordinary diff. eq. and BE 6703.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9433 Protein Engineering

3 Credits This course introduces the modern protein engineering techniques that allow researchers to understand protein structure and function and to create new proteins for many purposes. This new field is at the interface of chemistry, biology and engineering. The first part of the course discusses the protein composition and structure, various genetic, biochemical and chemical techniques required to engineer proteins, which is followed by specific topics. Topics include designing proteins that
are highly structured; that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): CM 9413 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 9443 Tissue Engineering**

3 Credits This course teaches basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature on tissue engineering; how to anticipate biocompatibility issues with a variety of implant devices students may later encounter; current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Masters**

**Biomedical Engineering, Bioinstrumentation Track, M.S.**

The Curriculum

**Requirements for the Master of Science**

Each track within the BME MS program includes two options. The first specifies course requirements that include a thesis option and a second that specifies courses only. Students who choose the master’s thesis option must register for at least 3 credits of BE 997x and then write and defend a master’s thesis according to Institute guidelines. Those students electing the thesis option will also be required to take CM 5040: Chemical Lab Safety.

**Biomedical Engineering—Bioinstrumentation Track**

To meet graduation requirements, students must achieve an overall B average in all courses (including MS thesis, research or guided studies) and must not have more than two grades of C in required (core) subjects.

Listed below are required (core) courses for students in the Bioinstrumentation track that fulfill the requirements for an MS in Biomedical Engineering. Two options are presented, one for students electing the thesis option.

**Required Courses:**

**BE 6103 Anatomy, Physiology and Biophysics I**
3 Credits Anatomy and Physiology are the sciences that identify body structures and how they function and interact, respectively. Therefore, academic training for biomedical engineering must include a sound, comprehensive knowledge of human anatomy and physiology. While the course emphasizes normal functions, it also considers the consequences of disease and injury and deals with the body’s potential for recovery and compensation. The Biophysics’ component examine the underlying physical principles of organ function. Part I of this two-part sequence focuses on Cell Physiology and Homeostasis, Cardiac, Nervous, and Respiratory systems. The course will be taught using a “systems engineering” approach and introduce the design considerations for artificial organs. The material includes hands-on demonstration of technology to measure EEGs, EKG and respiratory function.

Prerequisite(s): Calculus, biochemistry, introductory gross and cellular anatomy.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6113 Anatomy, Physiology and Biophysics II

3 Credits Part II of this sequence focuses on the muscular, skeletal, renal and endocrine systems and includes discussions on skin and basic oncology. This part is taught using a same systems engineering and biophysics approach and link concepts from BE 6103. The material includes hands-on demonstration of technology to measure EMG and plasma glucose.

Prerequisite(s): BE 6103.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6303 Bio-optics

3 Credits Recent growth in using optics technology for biomedical research and health care has been explosive. New applications are made possible by emerging technologies in lasers, optoelectronic devices, fiber optics, physical and chemical sensors and imaging—all of which are now applied to medical research, diagnostics and therapy. This sequence course on optics for biomedical students combines fundamental knowledge of the generation and interaction of electromagnetic waves with applications to the biomedical field. The goal is for this approach is to provide tools for researchers in bio-physics and to familiarize researchers, technologists and premed students with cutting-edge approaches.

Prerequisite(s): An undergraduate course in physics that includes electricity, magnetism and waves such as PH 2023 and multivariable calculus such as MA 2122 and MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6453 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
BE 6503 Biomedical Instrumentation

3 Credits This course, is for graduate students in the Bioengineering Program, introduces the principles of commonly used instruments in neuroscience research, particularly in electrophysiology and imaging. The course discusses theoretical considerations in choosing techniques as well as practical issues in selecting materials and designing experiments.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6403 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: EL 6113.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9740 Seminar in Biomedical Engineering

Students present research findings if engaged in MS or PhD thesis research, or make presentations from their critical analysis of recent biomedical-engineering publications. The seminar gives students the opportunity to prepare a scientific presentation on a biomedical-engineering topic of interest and to speak before their peers, who will question them.

BE 9730 Colloquium in Biomedical Engineering

0 Credits Engineers and scientists from industry and academia present recent developments in biomedical engineering. Two and four semesters are required for master’s and PhD students, respectively.

Prerequisite(s): None.

Electives
Research

**BE 997x MS Thesis in Biomedical Engineering**

9 total, each 3 Credits The thesis for the master’s degree in biomedical engineering should report the results of an original investigation of problems in biomedical engineering or application of physical, chemical or other scientific principles to biomedical engineering. The thesis may involve experimental research, theoretical analyses or process designs, or combinations of them. Master’s degree candidates are required to submit four unbound copies to advisers before the seventh Wednesday before commencement. Registration of at least 9 credits required

Prerequisite(s): Degree status.

Total Credits: 30

In addition

Once per year, biomedical engineering MS students must register for Colloquium in Biomedical Engineering (BE 9730, 0 credits) and Seminar in Biomedical Engineering (BE 9740, 0 credits).

For all students in the Bioinstrumentation track, the remaining 6 credits must be selected from the list of course electives, unless permission is granted by the biomedical engineering graduate adviser to substitute a course not listed below. Alternatively, students also may elect to take one or two biomedical engineering research courses (BE 873x) without writing a thesis.

Electives Courses

The table below lists the elective courses that are available to students pursuing an MS degree in either the Biomaterials, Medical Imaging or Bioinstrumentation tracks.

**BE 6013 Molecular Immunology**

3 Credits The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6023 Cellular and Molecular Neuroscience**
3 Credits A three-part, comprehensive overview of cellular neuroscience, this course covers the physiology and biophysics of neurons; neuronal signal transduction, gene expression and transport of RNA and protein; and synaptic transmission and plasticity. The textbook is Fundamental Neuroscience by Zigmond, Bloom, Landis, Roberts and Squire. Supplementary readings are from other textbooks and journal articles.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6203 Biomedical Imaging I

3 Credits This course introduces the physics, instrumentation and signal-processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging and magnetic resonance imaging.

Prerequisite(s): Undergraduate-level courses in multivariable calculus, physics, and probability. Corequisite(s): undergraduate or graduate level signals and systems. Open to graduate students and upper-level UG students. Signals and systems (EE 3054, preferred but not required).
Also listed under: EL 5823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6213 Biomedical Imaging II

3 Credits This course introduces the mechanisms and concepts related to image acquisition and subsequent image processing and image formation in biomedical imaging modalities. Building on material covered in Biomedical Imaging I, these courses focus on advanced topics such as functional magnetic resonance imaging (MRI), ultrasound imaging, biomagnetic imaging and optical tomographic imaging (OTI).

Prerequisite(s): BE 6203 (Biomedical Imaging I, B).
Also listed under: EL 6823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6223 Image Processing

3 Credits The course covers image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy-image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. C- or MATLAB implementation of selected imaging-processing algorithms.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: EL 5123.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6303 Bio-optics

3 Credits Recent growth in using optics technology for biomedical research and health care has been explosive. New applications are made possible by emerging technologies in lasers, optoelectronic devices, fiber optics, physical and chemical sensors and
imaging—all of which are now applied to medical research, diagnostics and therapy. This sequence course on optics for biomedical students combines fundamental knowledge of the generation and interaction of electromagnetic waves with applications to the biomedical field. The goal is for this approach is to provide tools for researchers in bio-physics and to familiarize researchers, technologists and premed students with cutting-edge approaches.

Prerequisite(s): An undergraduate course in physics that includes electricity, magnetism and waves such as PH 2023 and multivariable calculus such as MA 2122 and MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6403 Signals, Systems and Transforms**

Prerequisite(s): Graduate status.
Also listed under: EL 6113.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6453 Probability Theory**

Prerequisite(s): Graduate status and MA 3012.
Also listed under: EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6483 Digital Signal Processing Laboratory**

3 Credits This course includes hands-on laboratory experiments, lectures and projects relating to real-time, digital signal processing (DSP) systems using a DSP microprocessor. Students gain experience in implementing common algorithms used in a variety of applications and learn tools and functions important for designing DSP-based systems. Students are required to complete a project and give an oral presentation. This course is suitable for students interested in DSP and Embedded Systems.

Prerequisite(s): EL 6113 or Equivalent, C/C++.
Also listed under: EL 6183.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**BE 6503 Biomedical Instrumentation**
3 Credits This course, is for graduate students in the Bioengineering Program, introduces the principles of commonly used instruments in neuroscience research, particularly in electrophysiology and imaging. The course discusses theoretical considerations in choosing techniques as well as practical issues in selecting materials and designing experiments.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6603 Intro to Drug Delivery

3 Credits The course provides an integrated approach to the basic and clinical science of drug delivery. Topics: the history drug delivery; kinds of drugs to be delivered, including genes and proteins; various targeting mechanisms; transport phenomena and thermodynamic concepts; pharmacokinetics of drug delivery, polymeric drug-delivery systems; various devices developed for controlled delivery.

Prerequisite(s): calculus with ordinary diff. eq.; undergraduate courses in biology, chemistry and physiology (minimum grade B).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6653 Principles of Chemical and Biochemical Systems

3 Credits This introductory course for graduate engineering students focuses on fundamental knowledge of chemical and biochemical reactions. Students learn structure and function of biological molecules such as proteins, carbohydrates and DNA. They master basic concepts of structure-property relationships of macromolecules. Chemistries critical to biosensor technologies such as linking biological molecules to various supports, is described. Students appreciate and understand the wide range of chemical and biological molecules critical to living systems.

Prerequisite(s): Instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6703 Materials in Medicine

3 Credits The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6753 Orthopaedic Biomechanics and Biomaterials

3 Credits The course provides fundamental knowledge of the relevant background science, theory, practice and materials required to provide modern orthopedic and trauma care. Students learn about biomaterials used in orthopedics and how materials engineering has made them increasingly sophisticated. The course covers important clinical applications as well as fundamental concepts in biomechanics of bone and other tissues; materials used; wear and corrosion during use; dental implants; joint-replacement devices; stress-strain analysis, beam theory; introduction to finite element analysis design for prosthesis; and more.
Prerequisite(s): Calculus with ordinary diff. eq. and BE 6703.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 871x Guided Studies in Biomedical Engineering

Under faculty supervision, students study selections, analyses, solutions and presentations of biomedical engineering reports for problems in products, processes or equipment design, or other fields of biomedical-engineering practices. Conferences are scheduled. Master’s degree candidates are required to submit three unbound copies of their reports to advisers one week before the last day of classes. Credits: 6 total, each 3 credits.

Prerequisite(s): Degree status.

BE 9433 Protein Engineering

3 Credits This course introduces the modern protein engineering techniques that allow researchers to understand protein structure and function and to create new proteins for many purposes. This new field is at the interface of chemistry, biology and engineering. The first part of the course discusses the protein composition and structure, various genetic, biochemical and chemical techniques required to engineer proteins, which is followed by specific topics. Topics include designing proteins that are highly structured; that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): CM 9413 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9443 Tissue Engineering

3 Credits This course teaches basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature on tissue engineering; how to anticipate biocompatibility issues with a variety of implant devices students may later encounter; current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9753 Bioethics Seminar

3 Credits This graduate-level seminar course discusses the ethical issues relevant to today’s bioengineers and molecular and cell biologists. Topics include: Darwin’s theory of evolution; science and religion in twentieth-century America; Intelligent Design Theory; social Darwinism and the concomitant rise of eugenics in Europe and the U.S., the ways in which molecular genetics has challenged historical categories of race; the ethical, social, and legal implications of the Human Genome Project (specifically genetic privacy and testing, human genes and intellectual property); argobiotechnology and the science, ethics, and politics of genetically modified organisms (GMOs); and the science, politics, and ethics of human-embryonic-stem-cell research. The student is encouraged to think about the way in which debates concerning “nature versus nurture” have been framed historically, in order to understand current controversies over that distinction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6643 Computer Vision and Scene Analysis

3 Credits An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.

Prerequisite(s): Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5013 Wireless Personal Communication Systems

3 Credits The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference-limited communications, multiple access, radio resources management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

Prerequisite(s): EE 3404 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6283 Mathematical Modeling in Biology

Prerequisite(s): MA 2122 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 7863 Special Topics

3 Credits These course numbers are reserved for special topics offered periodically by the Mechanical Engineering Program and are open to first year graduate students. When offered, the subject matter is indicated as part of the title after the words “Special Topics,” and the complete title appears on the student’s transcript.
Prerequisite(s): tailored to the offering, and adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 6403 Physical Concepts of Polymer Nanocomposites**

3 Credits
This course presents fundamental aspects of polymer nanocomposites and updates on recent advancements and modern applications. Topics include nanostructured materials; assembly at interfaces; interactions on surfaces; properties of polymer nanocomposites; reliability; nanodevices.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2303 Introduction to Biostatistics**

4 Credits
Introduction to probability and statistical methods utilized in the analysis and interpretation of experimental and epidemiological data. Statistical techniques associated with the normal, binomial, Poisson, t, F, and chi-squared distributions plus an introduction to nonparametric methods. Applications in biology, medicine, and the health sciences.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2030 Statistics in Biology**

4 Credits
Advanced course on techniques of statistical analysis and experimental design that are useful in research and in the interpretation of biology literature. Principles of statistical inference, the design of experiments, and analysis of data are taught using examples drawn from the literature. Covers the use of common parametric and nonparametric distributions for the description of data and the testing of hypotheses.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Biomedical Engineering, Biomaterials Track, M.S.

The Curriculum

Requirements for the Master of Science

Each track within the BME MS program includes two options. The first specifies course requirements that include a thesis option and a second that specifies courses only. Students who choose the master’s thesis option must register for at least 3 credits of BE 997x and then write and defend a master’s thesis according to Institute guidelines. Those students electing the thesis option will also be required to take CM 5040: Chemical Lab Safety.

Biomedical Engineering—Biomaterials Track
To meet graduation requirements, students must have an overall B average in all courses (including MS thesis, research or guided studies) and must not have more than two grades of C in required (core) subjects.

Required courses for all students in the Biomaterials Track that fulfill their requirements for an MS in Biomedical Engineering are shown below:

**Required Courses**

**BE 6013 Molecular Immunology**

*3 Credits* The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6103 Anatomy, Physiology and Biophysics I**

*3 Credits* Anatomy and Physiology are the sciences that identify body structures and how they function and interact, respectively. Therefore, academic training for biomedical engineering must include a sound, comprehensive knowledge of human anatomy and physiology. While the course emphasizes normal functions, it also considers the consequences of disease and injury and deals with the body’s potential for recovery and compensation. The Biophysics’ component examine the underlying physical principles of organ function. Part I of this two-part sequence focuses on Cell Physiology and Homeostasis, Cardiac, Nervous, and Respiratory systems. The course will be taught using a “systems engineering” approach and introduce the design considerations for artificial organs. The material includes hands-on demonstration of technology to measure EEGs, EKG and respiratory function.

Prerequisite(s): Calculus, biochemistry, introductory gross and cellular anatomy.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6113 Anatomy, Physiology and Biophysics II**

*3 Credits* Part II of this sequence focuses on the muscular, skeletal, renal and endocrine systems and includes discussions on skin and basic oncology. This part is taught using a same systems engineering and biophysics approach and link concepts from BE 6103. The material includes hands-on demonstration of technology to measure EMG and plasma glucose.

Prerequisite(s): BE 6103.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2303 Introduction to Biostatistics**

*4 Credits* Introduction to probability and statistical methods utilized in the analysis and interpretation of experimental and epidemiological data. Statistical techniques associated with the normal, binomial, Poisson, t, F, and chisquared distributions plus an introduction to nonparametric methods. Applications in biology, medicine, and the health sciences.
BIOL-GA 2030 Statistics in Biology

4 Credits Advanced course on techniques of statistical analysis and experimental design that are useful in research and in the interpretation of biology literature. Principles of statistical inference, the design of experiments, and analysis of data are taught using examples drawn from the literature. Covers the use of common parametric and nonparametric distributions for the description of data and the testing of hypotheses.

BE 6703 Materials in Medicine

3 Credits The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.

BE 6753 Orthopaedic Biomechanics and Biomaterials

3 Credits The course provides fundamental knowledge of the relevant background science, theory, practice and materials required to provide modern orthopedic and trauma care. Students learn about biomaterials used in orthopedics and how materials engineering has made them increasingly sophisticated. The course covers important clinical applications as well as fundamental concepts in biomechanics of bone and other tissues; materials used; wear and corrosion during use; dental implants; joint-replacement devices; stress-strain analysis, beam theory; introduction to finite element analysis design for prosthesis; and more.

Prerequisite(s): Calculus with ordinary diff. eq. and BE 6703.

BE 9433 Protein Engineering

3 Credits This course introduces the modern protein engineering techniques that allow researchers to understand protein structure and function and to create new proteins for many purposes. This new field is at the interface of chemistry, biology and engineering. The first part of the course discusses the protein composition and structure, various genetic, biochemical and chemical techniques required to engineer proteins, which is followed by specific topics. Topics include designing proteins that are highly structured; that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): CM 9413 or adviser’s approval.
BE 9443 Tissue Engineering

3 Credits This course teaches basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature on tissue engineering; how to anticipate biocompatibility issues with a variety of implant devices students may later encounter; current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9740 Seminar in Biomedical Engineering

Students present research findings if engaged in MS or PhD thesis research, or make presentations from their critical analysis of recent biomedical-engineering publications. The seminar gives students the opportunity to prepare a scientific presentation on a biomedical-engineering topic of interest and to speak before their peers, who will question them.

BE 9730 Colloquium in Biomedical Engineering

0 Credits Engineers and scientists from industry and academia present recent developments in biomedical engineering. Two and four semesters are required for master’s and PhD students, respectively.

Prerequisite(s): None.

Electives

- See List below 6 Credits *

Research

BE 997x MS Thesis in Biomedical Engineering

9 total, each 3 Credits The thesis for the master’s degree in biomedical engineering should report the results of an original investigation of problems in biomedical engineering or application of physical, chemical or other scientific principles to biomedical engineering. The thesis may involve experimental research, theoretical analyses or process designs, or combinations of them. Master’s degree candidates are required to submit four unbound copies to advisers before the seventh Wednesday before commencement. Registration of at least 9 credits required

Prerequisite(s): Degree status.

Total Credits: 31
In addition

Once per year, biomedical engineering MS students must register for Colloquium in Biomedical Engineering (BE 9730, 0 credits) and Seminar in Biomedical Engineering (BE 9740, 0 credits).

For all students in the Biomaterials and Polymer Therapeutics track, remaining credits (6) must be selected from the list of electives unless permission is granted by the biomedical engineering graduate adviser to substitute a course not listed below. Alternatively, students also may elect to take research in biomedical engineering courses (BE 873x, 3 to 6 credits) without writing a thesis.

Electives Courses

The table below lists the elective courses that are available to students pursuing an MS degree in either the Biomaterials, Medical Imaging or Bioinstrumentation tracks.

**BE 6013 Molecular Immunology**

3 Credits The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6023 Cellular and Molecular Neuroscience**

3 Credits A three-part, comprehensive overview of cellular neuroscience, this course covers the physiology and biophysics of neurons; neuronal signal transduction, gene expression and transport of RNA and protein; and synaptic transmission and plasticity. The textbook is Fundamental Neuroscience by Zigmond, Bloom, Landis, Roberts and Squire. Supplementary readings are from other textbooks and journal articles.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6203 Biomedical Imaging I**

3 Credits This course introduces the physics, instrumentation and signal-processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging and magnetic resonance imaging.

Prerequisite(s): Undergraduate-level courses in multivariable calculus, physics, and probability. Corequisite(s): undergraduate or graduate level signals and systems. Open to graduate students and upper-level UG students. Signals and systems (EE 3054, preferred but not required). Also listed under: EL 5823.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
BE 6213 Biomedical Imaging II

3 Credits This course introduces the mechanisms and concepts related to image acquisition and subsequent image processing and image formation in biomedical imaging modalities. Building on material covered in Biomedical Imaging I, these courses focus on advanced topics such as functional magnetic resonance imaging (MRI), ultrasound imaging, biomagnetic imaging and optical tomographic imaging (OTI).

Prerequisite(s): BE 6203 (Biomedical Imaging I, B).
Also listed under: EL 6823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6223 Image Processing

3 Credits The course covers image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy-image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. C- or MATLAB implementation of selected imaging-processing algorithms.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: EL 5123.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6303 Bio-optics

3 Credits Recent growth in using optics technology for biomedical research and health care has been explosive. New applications are made possible by emerging technologies in lasers, optoelectronic devices, fiber optics, physical and chemical sensors and imaging—all of which are now applied to medical research, diagnostics and therapy. This sequence course on optics for biomedical students combines fundamental knowledge of the generation and interaction of electromagnetic waves with applications to the biomedical field. The goal is for this approach is to provide tools for researchers in bio-physics and to familiarize researchers, technologists and premed students with cutting-edge approaches.

Prerequisite(s): An undergraduate course in physics that includes electricity, magnetism and waves such as PH 2023 and multivariable calculus such as MA 2122 and MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6403 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: EL 6113.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
BE 6453 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6483 Digital Signal Processing Laboratory

3 Credits This course includes hands-on laboratory experiments, lectures and projects relating to real-time, digital signal processing (DSP) systems using a DSP microprocessor. Students gain experience in implementing common algorithms used in a variety of applications and learn tools and functions important for designing DSP-based systems. Students are required to complete a project and give an oral presentation. This course is suitable for students interested in DSP and Embedded Systems.

Prerequisite(s): EL 6113 or Equivalent, C/C++.
Also listed under: EL 6183.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

BE 6503 Biomedical Instrumentation

3 Credits This course is for graduate students in the Bioengineering Program, introduces the principles of commonly used instruments in neuroscience research, particularly in electrophysiology and imaging. The course discusses theoretical considerations in choosing techniques as well as practical issues in selecting materials and designing experiments.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6603 Intro to Drug Delivery

3 Credits The course provides an integrated approach to the basic and clinical science of drug delivery. Topics: the history drug delivery; kinds of drugs to be delivered, including genes and proteins; various targeting mechanisms; transport phenomena and thermodynamic concepts; pharmacokinetics of drug delivery, polymeric drug-delivery systems; various devices developed for controlled delivery.

Prerequisite(s): calculus with ordinary diff. eq.; undergraduate courses in biology, chemistry and physiology (minimum grade B).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
BE 6653 Principles of Chemical and Biochemical Systems

3 Credits
This introductory course for graduate engineering students focuses on fundamental knowledge of chemical and biochemical reactions. Students learn structure and function of biological molecules such as proteins, carbohydrates and DNA. They master basic concepts of structure-property relationships of macromolecules. Chemistries critical to biosensor technologies such as linking biological molecules to various supports, is described. Students appreciate and understand the wide range of chemical and biological molecules critical to living systems.

Prerequisite(s): Instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6703 Materials in Medicine

3 Credits
The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field; evaluation of the design criteria that a material must meet for a biological application; and what is required for “biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6753 Orthopaedic Biomechanics and Biomaterials

3 Credits
The course provides fundamental knowledge of the relevant background science, theory, practice and materials required to provide modern orthopedic and trauma care. Students learn about biomaterials used in orthopedics and how materials engineering has made them increasingly sophisticated. The course covers important clinical applications as well as fundamental concepts in biomechanics of bone and other tissues; materials used; wear and corrosion during use; dental implants; joint-replacement devices; stress-strain analysis, beam theory; introduction to finite element analysis design for prosthesis; and more.

Prerequisite(s): Calculus with ordinary diff. eq. and BE 6703.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 871x Guided Studies in Biomedical Engineering

Under faculty supervision, students study selections, analyses, solutions and presentations of biomedical engineering reports for problems in products, processes or equipment design, or other fields of biomedical-engineering practices. Conferences are scheduled. Master’s degree candidates are required to submit three unbound copies of their reports to advisers one week before the last day of classes. Credits: 6 total, each 3 credits.

Prerequisite(s): Degree status.

BE 9433 Protein Engineering

3 Credits
This course introduces the modern protein engineering techniques that allow researchers to understand protein structure and function and to create new proteins for many purposes. This new field is at the interface of chemistry, biology and
engineering. The first part of the course discusses the protein composition and structure, various genetic, biochemical and chemical techniques required to engineer proteins, which is followed by specific topics. Topics include designing proteins that are highly structured; that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

Prerequisite(s): CM 9413 or adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9443 Tissue Engineering

3 Credits This course teaches basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature on tissue engineering; how to anticipate biocompatibility issues with a variety of implant devices students may later encounter; current approaches directed toward the engineering of cell-based replacements for various tissue types.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9753 Bioethics Seminar

3 Credits This graduate-level seminar course discusses the ethical issues relevant to today’s bioengineers and molecular and cell biologists. Topics include: Darwin’s theory of evolution; science and religion in twentieth-century America; Intelligent Design Theory; social Darwinism and the concomitant rise of eugenics in Europe and the U.S., the ways in which molecular genetics has challenged historical categories of race; the ethical, social, and legal implications of the Human Genome Project (specifically genetic privacy and testing, human genes and intellectual property); argobiotechnology and the science, ethics, and politics of genetically modified organisms (GMOs); and the science, politics, and ethics of human-embryonic-stem-cell research. The student is encouraged to think about the way in which debates concerning “nature versus nurture” have been framed historically, in order to understand current controversies over that distinction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6643 Computer Vision and Scene Analysis

3 Credits An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.
Prerequisite(s): Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5013 Wireless Personal Communication Systems**

3 Credits The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference- limited communications, multiple access, radio resources management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

Prerequisite(s): EE 3404 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 6283 Mathematical Modeling in Biology**

Prerequisite(s): MA 2122 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 7863 Special Topics**

3 Credits These course numbers are reserved for special topics offered periodically by the Mechanical Engineering Program and are open to first year graduate students. When offered, the subject matter is indicated as part of the title after the words “Special Topics,” and the complete title appears on the student’s transcript.

Prerequisite(s): tailored to the offering, and adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 6403 Physical Concepts of Polymer Nanocomposites**

3 Credits This course presents fundamental aspects of polymer nanocomposites and updates on recent advancements and modern applications. Topics include nanostructured materials; assembly at interfaces; interactions on surfaces; properties of polymer nanocomposites; reliability; nanodevices.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2303 Introduction to Biostatistics**

4 Credits Introduction to probability and statistical methods utilized in the analysis and interpretation of experimental and epidemiological data. Statistical techniques associated with the normal, binomial, Poisson, t, F, and chisquared distributions plus an introduction to nonparametric methods. Applications in biology, medicine, and the health sciences.
BIOL-GA 2030 Statistics in Biology

4 Credits Advanced course on techniques of statistical analysis and experimental design that are useful in research and in the interpretation of biology literature. Principles of statistical inference, the design of experiments, and analysis of data are taught using examples drawn from the literature. Covers the use of common parametric and nonparametric distributions for the description of data and the testing of hypotheses.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Biomedical Engineering, Medical Imaging Track, M.S.

The Curriculum

Requirements for the Master of Science

Each track within the BME MS program includes two options. The first specifies course requirements that include a thesis option and a second that specifies courses only. Students who choose the master’s thesis option must register for at least 3 credits of BE 997x and then write and defend a master’s thesis according to Institute guidelines. Those students electing the thesis option will also be required to take CM 5040: Chemical Lab Safety.

Biomedical Engineering—Medical Imaging Track

To meet graduation requirements, students must achieve an overall B average in all courses (including MS thesis, research or guided studies) and must not have more than two grades of C in required (core) subjects.

Listed below are required (core) courses for students in the Medical Imaging track that fulfill the requirements for an MS in Biomedical Engineering.

Required Courses:

BE 6103 Anatomy, Physiology and Biophysics I

3 Credits Anatomy and Physiology are the sciences that identify body structures and how they function and interact, respectively. Therefore, academic training for biomedical engineering must include a sound, comprehensive knowledge of human anatomy and physiology. While the course emphasizes normal functions, it also considers the consequences of disease and injury and deals with the body’s potential for recovery and compensation. The Biophysics’ component examine the underlying physical principles of organ function. Part I of this two-part sequence focuses on Cell Physiology and Homeostasis, Cardiac, Nervous, and Respiratory systems. The course will be taught using a “systems engineering” approach and introduce the design considerations for artificial organs. The material includes hands-on demonstration of technology to measure EEGs, EKG and respiratory
function.

Prerequisite(s): Calculus, biochemistry, introductory gross and cellular anatomy.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6113 Anatomy, Physiology and Biophysics II

3 Credits Part II of this sequence focuses on the muscular, skeletal, renal and endocrine systems and includes discussions on skin and basic oncology. This part is taught using a same systems engineering and biophysics approach and link concepts from BE 6103. The material includes hands-on demonstration of technology to measure EMG and plasma glucose.

Prerequisite(s): BE 6103.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6203 Biomedical Imaging I

3 Credits This course introduces the physics, instrumentation and signal-processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging and magnetic resonance imaging.

Prerequisite(s): Undergraduate-level courses in multivariable calculus, physics, and probability. Corequisite(s): undergraduate or graduate level signals and systems. Open to graduate students and upper-level UG students. Signals and systems (EE 3054, preferred but not required).
Also listed under: EL 5823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6223 Image Processing

3 Credits The course covers image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy-image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. C- or MATLAB implementation of selected imaging-processing algorithms.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: EL 5123.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6453 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6403 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: EL 6113.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 9740 Seminar in Biomedical Engineering

Students present research findings if engaged in MS or PhD thesis research, or make presentations from their critical analysis of recent biomedical-engineering publications. The seminar gives students the opportunity to prepare a scientific presentation on a biomedical-engineering topic of interest and to speak before their peers, who will question them.

BE 9730 Colloquium in Biomedical Engineering

0 Credits Engineers and scientists from industry and academia present recent developments in biomedical engineering. Two and four semesters are required for master’s and PhD students, respectively.

Prerequisite(s): None.

Electives

- See List below 3-9 Credits *
Research

BE 997x MS Thesis in Biomedical Engineering

9 total, each 3 Credits The thesis for the master’s degree in biomedical engineering should report the results of an original investigation of problems in biomedical engineering or application of physical, chemical or other scientific principles to biomedical engineering. The thesis may involve experimental research, theoretical analyses or process designs, or combinations of them. Master’s degree candidates are required to submit four unbound copies to advisers before the seventh Wednesday before commencement. Registration of at least 9 credits required

Prerequisite(s): Degree status.

Total Credits: 30

In addition

Once per year, biomedical engineering MS students must register for Colloquium in Biomedical Engineering (BE 9730, 0 credits) and Seminar in Biomedical Engineering (BE 9740, 0 credits).

For all students in the Medical Imaging track, the remaining 6 credits must be selected from the list of course electives, unless permission is granted by the biomedical engineering graduate adviser to substitute a course not listed below. Alternatively, students also may elect to take one or two biomedical engineering research courses (BE 873x) without writing a thesis.

Electives Courses

The table below lists the elective courses that are available to students pursuing an MS degree in either the Biomaterials, Medical Imaging or Bioinstrumentation tracks.

BE 6013 Molecular Immunology

3 Credits The course familiarizes students with the body of research that underpins the understanding of the molecular basis and the cellular interactions that regulate immune responses. Topics: Antibody structure, B-cell development, T-cell structure and development, T-cell-MHC interaction, MHC structure and antigen processing, complement chemistry, complement and Fc receptor structure and function, transplantation immunogenetics, mucosal immunology and allergic reactions.

Prerequisite(s): Adviser’s approval.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6023 Cellular and Molecular Neuroscience

3 Credits A three-part, comprehensive overview of cellular neuroscience, this course covers the physiology and biophysics of neurons; neuronal signal transduction, gene expression and transport of RNA and protein; and synaptic transmission and plasticity. The textbook is Fundamental Neuroscience by Zigmond, Bloom, Landis, Roberts and Squire. Supplementary readings
are from other textbooks and journal articles.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6203 Biomedical Imaging I

3 Credits This course introduces the physics, instrumentation and signal-processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging and magnetic resonance imaging.

Prerequisite(s): Undergraduate-level courses in multivariable calculus, physics, and probability. Corequisite(s): undergraduate or graduate level signals and systems. Open to graduate students and upper-level UG students. Signals and systems (EE 3054, preferred but not required). Also listed under: EL 5823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6213 Biomedical Imaging II

3 Credits This course introduces the mechanisms and concepts related to image acquisition and subsequent image processing and image formation in biomedical imaging modalities. Building on material covered in Biomedical Imaging I, these courses focus on advanced topics such as functional magnetic resonance imaging (MRI), ultrasound imaging, biomagnetic imaging and optical tomographic imaging (OTI).

Prerequisite(s): BE 6203 (Biomedical Imaging 1, B).
Also listed under: EL 6823.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6223 Image Processing

3 Credits The course covers image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy-image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. C- or MATLAB implementation of selected imaging-processing algorithms.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: EL 5123.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

BE 6303 Bio-optics

3 Credits Recent growth in using optics technology for biomedical research and health care has been explosive. New applications are made possible by emerging technologies in lasers, optoelectronic devices, fiber optics, physical and chemical sensors and imaging—all of which are now applied to medical research, diagnostics and therapy. This sequence course on optics for biomedical students combines fundamental knowledge of the generation and interaction of electromagnetic waves with applications to the biomedical field. The goal is for this approach is to provide tools for researchers in bio-physics and to
familiarize researchers, technologists and premed students with cutting-edge approaches.

*Prerequisite(s):* An undergraduate course in physics that includes electricity, magnetism and waves such as PH 2023 and multivariable calculus such as MA 2122 and MA 2122.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6403 Signals, Systems and Transforms**

*Prerequisite(s):* Graduate status.
Also listed under: EL 6113.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6453 Probability Theory**

*Prerequisite(s):* Graduate status and MA 3012.
Also listed under: EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6483 Digital Signal Processing Laboratory**

*3 Credits* This course includes hands-on laboratory experiments, lectures and projects relating to real-time, digital signal processing (DSP) systems using a DSP microprocessor. Students gain experience in implementing common algorithms used in a variety of applications and learn tools and functions important for designing DSP-based systems. Students are required to complete a project and give an oral presentation. This course is suitable for students interested in DSP and Embedded Systems.

*Prerequisite(s):* EL 6113 or Equivalent, C/C++.
Also listed under: EL 6183.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**BE 6503 Biomedical Instrumentation**
This course, for graduate students in the Bioengineering Program, introduces the principles of commonly used
instruments in neuroscience research, particularly in electrophysiology and imaging. The course discusses theoretical
considerations in choosing techniques as well as practical issues in selecting materials and designing experiments.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6603 Intro to Drug Delivery**

3 Credits The course provides an integrated approach to the basic and clinical science of drug delivery. Topics: the history drug
delivery; kinds of drugs to be delivered, including genes and proteins; various targeting mechanisms; transport phenomena and
thermodynamic concepts; pharmacokinetics of drug delivery, polymeric drug-delivery systems; various devices developed for
controlled delivery.

Prerequisite(s): calculus with ordinary diff. eq.; undergraduate courses in biology, chemistry and physiology (minimum grade
B).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6653 Principles of Chemical and Biochemical Systems**

3 Credits This introductory course for graduate engineering students focuses on fundamental knowledge of chemical and
biochemical reactions. Students learn structure and function of biological molecules such as proteins, carbohydrates and DNA.
They master basic concepts of structure-property relationships of macromolecules. Chemistries critical to biosensor technologies
such as linking biological molecules to various supports, is described. Students appreciate and understand the wide range of
chemical and biological molecules critical to living systems.

Prerequisite(s): Instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6703 Materials in Medicine**

3 Credits The course focuses on the basic principles behind human-tissue response to artificial surfaces and materials; the general
types of polymeric and metallic materials used in soft- and hard-tissue replacements; tissue engineering and drug-delivery
devices; current approaches directed toward the engineering of cell-based replacement for various tissues; techniques to control
the physiologic response to artificial surfaces; critical review of current biomaterials literature; current research in the field;
evaluation of the design criteria that a material must meet for a biological application; and what is required for
“biocompatibility.”

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 6753 Orthopaedic Biomechanics and Biomaterials**

3 Credits The course provides fundamental knowledge of the relevant background science, theory, practice and materials
required to provide modern orthopedic and trauma care. Students learn about biomaterials used in orthopedics and how materials
engineering has made them increasingly sophisticated. The course covers important clinical applications as well as fundamental
concepts in biomechanics of bone and other tissues; materials used; wear and corrosion during use; dental implants; joint-
replacement devices; stress-strain analysis, beam theory; introduction to finite element analysis design for prosthesis; and more.
Prerequisite(s): Calculus with ordinary diff. eq. and BE 6703.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 871x Guided Studies in Biomedical Engineering**

Under faculty supervision, students study selections, analyses, solutions and presentations of biomedical engineering reports for problems in products, processes or equipment design, or other fields of biomedical-engineering practices. Conferences are scheduled. Master’s degree candidates are required to submit three unbound copies of their reports to advisers one week before the last day of classes. Credits: 6 total, each 3 credits.

**Prerequisite(s):** Degree status.

**BE 9433 Protein Engineering**

3 Credits This course introduces the modern protein engineering techniques that allow researchers to understand protein structure and function and to create new proteins for many purposes. This new field is at the interface of chemistry, biology and engineering. The first part of the course discusses the protein composition and structure, various genetic, biochemical and chemical techniques required to engineer proteins, which is followed by specific topics. Topics include designing proteins that are highly structured; that are active at high temperatures and in non-aqueous solvents; that interact selectively with other proteins, small molecules and nucleic acids for therapeutic purposes; and that catalyze new reactions.

**Prerequisite(s):** CM 9413 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 9443 Tissue Engineering**

3 Credits This course teaches basic biological processes that occur during blood contact with artificial surfaces; how to critically read and review literature on tissue engineering; how to anticipate biocompatibility issues with a variety of implant devices students may later encounter; current approaches directed toward the engineering of cell-based replacements for various tissue types.

**Prerequisite(s):** Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BE 9753 Bioethics Seminar**

3 Credits This graduate-level seminar course discusses the ethical issues relevant to today’s bioengineers and molecular and cell biologists. Topics include: Darwin’s theory of evolution; science and religion in twentieth-century America; Intelligent Design Theory; social Darwinism and the concomitant rise of eugenics in Europe and the U.S., the ways in which molecular genetics has challenged historical categories of race; the ethical, social, and legal implications of the Human Genome Project (specifically genetic privacy and testing, human genes and intellectual property); argobiotechnology and the science, ethics, and politics of genetically modified organisms (GMOs); and the science, politics, and ethics of human-embryonic-stem-cell research. The student is encouraged to think about the way in which debates concerning “nature versus nurture” have been framed historically, in order to understand current controversies over that distinction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6643 Computer Vision and Scene Analysis

3 Credits An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.

Prerequisite(s): Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5013 Wireless Personal Communication Systems

3 Credits The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference-limited communications, multiple access, radio resource management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

Prerequisite(s): EE 3404 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6283 Mathematical Modeling in Biology

Prerequisite(s): MA 2122 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 7863 Special Topics

3 Credits These course numbers are reserved for special topics offered periodically by the Mechanical Engineering Program and are open to first year graduate students. When offered, the subject matter is indicated as part of the title after the words “Special Topics,” and the complete title appears on the student’s transcript.
Prerequisite(s): tailored to the offering, and adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 6403 Physical Concepts of Polymer Nanocomposites**

*3 Credits* This course presents fundamental aspects of polymer nanocomposites and updates on recent advancements and modern applications. Topics include nanostructured materials; assembly at interfaces; interactions on surfaces; properties of polymer nanocomposites; reliability; nanodevices.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2303 Introduction to Biostatistics**

*4 Credits* Introduction to probability and statistical methods utilized in the analysis and interpretation of experimental and epidemiological data. Statistical techniques associated with the normal, binomial, Poisson, t, F, and chisquared distributions plus an introduction to nonparametric methods. Applications in biology, medicine, and the health sciences.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BIOL-GA 2030 Statistics in Biology**

*4 Credits* Advanced course on techniques of statistical analysis and experimental design that are useful in research and in the interpretation of biology literature. Principles of statistical inference, the design of experiments, and analysis of data are taught using examples drawn from the literature. Covers the use of common parametric and nonparametric distributions for the description of data and the testing of hypotheses.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Chemical and Biological Engineering**

*Academic Directors:*
Walter Zurawsky (undergraduate)
Jovan Mijovic (graduate)

Chemical and biomolecular engineers rely heavily on science, engineering methods, experience and inventiveness to develop the processes and equipment required for economical production of new and useful products. Chemical and biomolecular engineers have contributed to developing virtually every material common to modern life. In addition to working with bulk chemicals and petroleum products, these engineers play key roles in producing plastics, pharmaceuticals, cosmetics, fertilizers and foodstuffs, synthetic rubber, rocket propellants, fuel cells, automatic controls, water desalination plants, missiles and artificial kidneys. New technologies, from sensors to the production of bulk chemicals from renewable bio-resources, require the unique skills of chemical and biomolecular engineers.

Chemical and biomolecular engineers may choose from a wide range of professional activities, including research, process and product development, design and supervision of the construction and operation of industrial plants, technical sales and services, consulting, management, teaching and entrepreneurship. Opportunities in chemical and biomolecular engineering are virtually unlimited.
The foundations of chemical and biomolecular engineering are the sciences, with emphasis on chemistry, biology, mathematics, physics and the engineering sciences including thermodynamics, fluid mechanics, kinetics and heat and mass transfer. Courses include the analysis, design and control of equipment, operations and processes. Students develop the knowledge and analytical skills necessary to bridge the gap between scientific advances and large-scale production of products.

**Graduate Programs in Chemical Engineering**

Chemical engineering graduate programs introduce advanced designs, research and development. The department offers graduate programs leading to a Master of Science in Chemical Engineering and Doctor of Philosophy in Chemical Engineering. A BS degree in chemical engineering or a related field of science or engineering is generally required for admission to graduate study. An applicant who has earned a bachelor’s degree from a foreign institution must submit Graduate Record Examination and TOEFL scores. Applicants with degrees in other fields or from other colleges may be admitted with undergraduate or graduate deficiencies as evaluated by the graduate adviser. Students must have had at least one course in differential equations. NYU-Poly research areas include biopolymers at interfaces, bio-sensors, dynamics of complex fluids, nanotechnology and nanomaterials, process-systems engineering, protein engineering and biomolecular diagnostics.

**Goals and Objectives**

The objective of the MS degree in chemical engineering is to provide an understanding of the fundamental principles of chemical engineering subjects. The program enhances mathematical and analytical skills and emphasizes advanced design concepts. Students in the MS program develop a deeper understanding of engineering principles, and laboratory and research skills. They also conduct an in-depth study of a specialized chemical engineering topic through a guided studies project or a research thesis.

The PhD degree in chemical engineering provides advanced knowledge of fundamentals and research in emerging fields in chemical engineering. Research skills are refined, and the candidate performs original research that advances the understanding of a specific chemical engineering discipline. Faculty plan programs of study individually with each candidate. Systematic study toward a doctorate is guided by a guidance committee appointed by the Office of Research and PhD Programs.

**Program options:**

- Chemical and Biomolecular Engineering, B.S.
- Chemical Engineering, Guided Thesis Option, M.S.
- Chemical Engineering, Thesis Option, M.S.
- Chemical Engineering, Ph.D.

**Bachelors**

**Chemical and Biomolecular Engineering, B.S.**

**Undergraduate Program**

The undergraduate program in chemical and biomolecular engineering provides a solid foundation in science and the engineering sciences. An integrated set of chemical and biomolecular engineering courses is built upon this foundation. Students receive thorough instruction in chemistry, biology, physics, mathematics and engineering science, which are basic to understanding
physical, chemical and biomolecular operations and processes. Courses in engineering science include engineering thermodynamics, reaction kinetics and engineering, process dynamics, fluid mechanics, heat and mass transfer.

The undergraduate program leads to a Bachelor of Science in Chemical and Biomolecular Engineering and is accredited by the Accreditation Board for Engineering and Technology (ABET).

**Educational Objectives**

The undergraduate program prepares graduates for careers in the chemical, biochemical, energy and related industries, for advanced study in graduate programs in chemical engineering and related fields, and in professional programs such as medicine, business and law.

**Curriculum**

Design is essential to chemical and biomolecular engineering education and is incorporated into many courses. Generally, as students progress through the curriculum and learn more fundamental engineering science, courses involve more design components and more complex design problems. Design elements are integral to many courses, which lead to the senior process-design courses. In these courses, students design chemical and biomolecular processes and their designs must include engineering, safety and economic considerations.

The chemical and biomolecular engineering curriculum provides a background that enables graduates to select professional careers from an extremely broad spectrum of opportunities. Graduates are prepared for employment in many industry capacities or to enter graduate school.

**Undergraduate Advising**

All entering freshmen are advised through the Academic Advisement Center. Departmental academic advisers advise sophomores, juniors, seniors and transfer students. Students meet with their academic advisers at least once a semester, coincident with registration for the next term. At this meeting, the adviser discusses the student’s work and checks progress towards meeting degree requirements. A graduation checklist is prepared for all students and updated when the students meet with the adviser for registration.

**Requirements for the Bachelor of Science**

In addition to the institute requirement of a 2.0 GPA or better for graduation, students also must meet the department’s academic standards. For chemical and biomolecular engineering students to advance to senior-year courses, they must maintain a 2.5 GPA in courses CBE 1002, CBE 2124, CBE 3153, CBE 3313, CBE 3233, CBE 3223 and CBE 3323. The same course must not be failed twice. Students who fail to meet these requirements are not allowed to register for senior courses. All listed prerequisites must be satisfied before students may enroll in CBE courses.

**Typical Course of Study for the Bachelor of Science in Chemical and Biomolecular Engineering**

**Freshman Year**
Fall Semester: 15 Credits

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): Placement exam or MA 912 or MA 914.*

*Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1004 General Chemistry for Engineers**

*4 Credits* This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

*Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**EG 1001 Engineering and Technology Forum**

*1 Credit* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations,
inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 16 Credits

**MA 1124 Calculus II**

*4 Credits* This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s):* MA 1024 or MA 1324. *Corequisite(s):* EG 1 Examination Hour

*Note:* credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**BMS 1004 Introduction to Cell and Molecular Biology**

*4 Credits* The course covers the fundamentals of biology. Topics: Physical, chemical and biochemical bases of life on various organizational levels, cellular morphology, complementarily of form and function, including reproduction, development and genetics.

*Corequisite(s):* EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CBE 1002 Introduction to Chemical and Biomolecular Engineering**

*2 Credits* This course introduces the chemical and biomolecular engineering profession, its history and its career potential. The course contains selected topics on basic chemical and biomolecular engineering and seminars covering the full range of chemical and biomolecular engineering profession from emerging areas to those found in more traditional positions.

*Prerequisite(s):* CM 1014 and EG 1003.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.
Prerequisite(s): EW 1013.

**CS 1133 Engineering Problem Solving and Programming**

*3 Credits* This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

_corequisite(s): EG 1 Examination Hour*
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

**Sophomore Year**

**Fall Semester: 17 Credits**

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 1013 Mechanics**

*3 Credits* This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)
Prerequisite(s): MA 2012 or MA 1024.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2122 Multivariable Calculus B

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2614 Physical Chemistry I
4 Credits This course covers chemical thermodynamics with applications to solutions, phase and chemical equilibria. Molecular motion and transport properties are also covered.

Prerequisite(s): CM 1004 or CM 1024 and MA 1124 or MA 1154 and PH 1013.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 2223 Organic Chemistry II

3 Credits This course continues CM 2213 and emphasizes finding the principles of organic chemistry in industrial practice and biochemical mechanisms. It introduces instrumental methods of analysis and identification.

Prerequisite(s): CM 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 16.5 Credits

CM 3314 Biochemistry I

4 Credits This course surveys modern biochemistry and emphasizes current areas of research. Also covered are structure-function relationships in proteins; enzymes and their mechanisms of action; bioenergetics principles and energy production; and biochemical theories and techniques.
Prerequisite(s): CM 2213 and CM 2614 or instructor’s permission.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 3153 Chemical and Biomolecular Engineering Thermodynamics

3 Credits This course covers thermodynamics of flow systems. Topics include properties of fluids with advanced equations of state; properties of non-ideal mixtures; activity-coefficient models for non-electrolyte and electrolyte solutions; phase-equilibrium calculations at low and elevated pressures by computer procedures; and chemical reaction equilibria.

Prerequisite(s): CBE 2124 and CM 2614.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 3313 Transport I

3 Credits This course establishes fundamental concepts in momentum and mass transfer and their applications in chemical and biomolecular systems. Topics in Momentum Transfer include macroscopic (integral) balances on finite control volumes of fluids (determination of inflow, outflow quantities), and microscopic (differential) balances on infinitesimal volumes of fluids (determination of fluid velocity profiles and pressure profiles). Topics in Mass Transfer include diffusion and convection with applications in separation processes and biomolecular systems.

Prerequisite(s): MA 2132 and CBE 2124.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
  • Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits
CBE 3233 Chemical and Biomolecular Engineering Separations

3 Credits This course introduces processes for chemical and biomolecular separations. Topics include thermodynamics of separation processes, and the analysis and design of processes such as distillation, absorption, extraction and crystallization. Analytical and computer techniques are emphasized.

Prerequisite(s): CBE 3153 and CBE 3313.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 3223 Kinetics and Reactor Design

3 Credits This course provides the fundamentals of thermodynamics and kinetics of chemical and biomolecular reactions and the development of skills to analyze and design reactor systems. Typical topics include homogeneous and heterogeneous reactors of various types, catalyzed and non-catalyzed reactors, and the design of single and cascaded chemical and bio-reactors.

Prerequisite(s): CBE 3153 and CBE 3313.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 3323 Transport II

3 Credits This course expands understanding in mass transfer, establishes fundamental concepts in heat transfer, and introduces engineering aspects of transport. Topics in Mass Transfer include diffusion-limited reactions with applications in biomolecular systems, transport in porous media, and mass transfer across membranes with applications in chemical and biomolecular systems. Topics in Heat Transfer include the basic mechanisms of conduction and convection. Topics in engineering aspects of transport include flow in closed conduits, heat-transfer equipment, and examples of simultaneous Heat and Mass Transfer.

Prerequisite(s): CBE 3313.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  • Engineering Elective 3 Credits
  • Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 16 Credits

CBE 4113 Engineering Laboratory I

3 Credits This course introduces the performance of experiments in unit operations, transport processes and unit processes. Students analyze and design experiments to meet stated objectives. Results are presented in written and oral form.

Prerequisite(s): CBE 3233.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 6 | Weekly Recitation Hours: 0
CBE 4143 Process Dynamics and Control

3 Credits This course introduces system dynamics and process control. Dynamic models of chemical processes are developed. The design and tuning of feed-back and feed-forward controllers are discussed, and students are introduced to multiple input/multiple output systems and large system control issues.

Prerequisite(s): CBE 3233

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 4163 Chemical and Biomolecular Process Design I

3 Credits This course provides the skills to synthesize and design chemical and biomolecular processes with considerations of site and process selections, process economics, construction materials, data requirements and acquisition flow sheeting and subsystems. Students receive computer procedures and case studies to gain experience in process simulation and analysis.

Prerequisite(s): CBE 3223.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Free Elective 4 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

CBE 4213 Engineering Laboratory II

3 Credits This course deals with continued experiments in unit operations, transport processes and process control. Students analyze and design experiments to meet stated objectives. Results are presented in writing and orally.

Prerequisite(s): CBE 4113 and CBE 4143.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 6 | Weekly Recitation Hours: 0

CBE 4173 Polymeric Materials

3 Credits This course examines processing, structure, properties and applications of polymers as engineering materials, including renewable resource based biopolymers. Topics include fundamentals of processing-morphology/property correlations in materials, basic concepts of viscoelasticity, fracture behavior, and thermal and electrical properties of engineering polymeric materials.

Prerequisite(s): CBE 3223 and CBE 3313.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 4263 Chemical and Biomolecular Process Design II

3 Credits This course provides the skills to optimally design industrial processes, synthesizing knowledge from previous chemical and biomolecular engineering courses. Students receive more advanced computer procedures and work on case studies
to gain further experience in process simulation and analysis. Design projects are conducted in teams similar to those in industry.

Prerequisite(s): CBE 4163 and CBE 4143.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Engineering Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits 

Total credits required for graduation: 128

Footnotes
1 Students who are placed by examination or by an adviser into MA 902, MA 912 or MA 914 must defer registration for MA 1024.
2 Students who are placed by examination or by an adviser into EN 1080W must subsequently register for EN 1033W, rather than EW 1013.
3 The requirements for Humanities and Social Sciences electives are described in the Undergraduate Academic Programs and Policies section of this catalog.

TRANSFER STUDENT S may substitute engineering electives in place of EG 1003 and CBE 1002.

Chemical Engineering

Masters

Chemical Engineering, Guided Thesis Option, M.S.

Requirements for the Master of Science in Chemical Engineering

Candidates for the MS in Chemical Engineering should plan their programs in accordance with the following list of requirements:

Guided Studies Option

CBE 902X Guided Studies in Chemical Engineering

3 Credits These studies involve selections, analyses, solutions and presentations of engineering reports of problems in products, processes or equipment design, or other fields of chemical engineering practices under faculty supervision. Conferences are scheduled. Master’s-degree candidates are required to submit three unbound copies of their reports to advisers one week before
the last day of classes.

*Prerequisite(s): Adviser’s approval.*

**Required (core) courses, 12 credits, 3 credits each**

**CBE 6153 Applied Mathematics in Engineering**

*3 Credits* This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

*Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CBE 6333 Transport Phenomena**

*3 Credits* The topics in this course include vector analysis review; diffusive fluxes; conservation equations for chemical species and thermal energy; boundary conditions; scaling and approximation techniques; solution methods for conduction and diffusion problems; transient unidirectional diffusion and conduction; momentum diffusion and viscous stress; conservation equation for momentum and the Navier-Stokes equations; unidirectional and lubrication flows; and low-Reynolds and high-Reynolds number flows.

*Prerequisite(s): CBE 3313 or adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CBE 6733 Chemical Engineering Thermodynamics**

*3 Credits* This course covers advanced treatment of phase and chemical equilibria; ideal and nonideal solutions; stability of thermodynamic systems; osmotic pressures; electrolyte solutions; solid-liquid equilibria; and biochemical applications.

*Prerequisite(s): CBE 3153 or adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CBE 6813 Chemical Reactor Analysis and Design**

*3 Credits* The topics in this course include trends and issues in modern reactor design; kinetics of complex homogenous and heterogeneous reactions; determination of nonlinear kinetic parameters, effects of transport processes, and catalyst deactivation; analysis and design of reactors; laminar flow reactors; dispersion model; split boundary condition problems; effects of non-ideal flow on conversion; and fixed-bed, fluidized-bed and multiphase reactors.

*Prerequisite(s): CBE 3223 or adviser’s approval.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Electives: 12 Credits

At least two electives (6 credits) must be chosen from approved CBE graduate courses, 6000-level and above, while the other two (6 credits) may be chosen from other graduate programs with the approval of the graduate adviser in chemical engineering.

Total: 30 Credits

Note:

To meet graduation requirements, students must have an overall B average in all courses (excluding MS Thesis or Guided Study Project) and must not obtain more than two grades of C in required subjects.

Chemical Engineering, Thesis Option, M.S.

Requirements for the Master of Science in Chemical Engineering

Candidates for the MS in Chemical Engineering should plan their programs in accordance with the following list of requirements:

Thesis Option

CBE 997X MS Thesis in Chemical & Biological Engineering

(9 credits total, 3 each) Credits Theses for the master’s degree in chemical engineering should give results of original investigation of problems in chemical engineering or the application of physical, chemical or other scientific principles to chemical engineering. Theses may involve experimental research, theoretical analyses or process designs, or combinations thereof. Master’s-degree candidates are required to submit four unbound copies to advisers before the seventh Wednesday before commencement.

Prerequisite(s): Adviser’s approval.

Required (core) courses, 12 credits, 3 credits each

CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.
Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6333 Transport Phenomena

3 Credits The topics in this course include vector analysis review; diffusive fluxes; conservation equations for chemical species and thermal energy; boundary conditions; scaling and approximation techniques; solution methods for conduction and diffusion problems; transient unidirectional diffusion and conduction; momentum diffusion and viscous stress; conservation equation for momentum and the Navier-Stokes equations; unidirectional and lubrication flows; and low-Reynolds and high-Reynolds number flows.

Prerequisite(s): CBE 3313 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6733 Chemical Engineering Thermodynamics

3 Credits This course covers advanced treatment of phase and chemical equilibria; ideal and nonideal solutions; stability of thermodynamic systems; osmotic pressures; electrolyte solutions; solid-liquid equilibria; and biochemical applications.

Prerequisite(s): CBE 3153 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6813 Chemical Reactor Analysis and Design

3 Credits The topics in this course include trends and issues in modern reactor design; kinetics of complex homogenous and heterogeneous reactions: determination of nonlinear kinetic parameters, effects of transport processes, and catalyst deactivation; analysis and design of reactors; laminar flow reactors; dispersion model; split boundary condition problems; effects of non-ideal flow on conversion; and fixed-bed, fluidized-bed and multiphase reactors.

Prerequisite(s): CBE 3223 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives: 9 Credits

At least two electives (6 credits) must be chosen from CBE 6003 - CBE 9413, while the other one (3 credits) may be chosen from other graduate programs with the approval of the graduate adviser in chemical engineering.

Total: 30 Credits

Note:

To meet graduation requirements, students must have an overall B average in all courses (excluding MS Thesis or Guided Study Project) and must not obtain more than two grades of C in required subjects.
Doctorate

Chemical Engineering, Ph.D.

Requirements for the Doctor of Philosophy in Chemical Engineering

Students must pass a comprehensive qualifying examination in chemical engineering and present a doctoral dissertation. The qualifying exam is given once a year. Additional details on the qualifying examination should be obtained from the graduate adviser. Each doctoral candidate must complete a minimum of 75 credits of academic work past the bachelor’s degree, including a minimum of 45 credits of dissertation research. Although the student may elect to take more than 45 credits of PhD thesis, only 45 of those credits can be counted in the required 75 credits. Furthermore, of those 45 credits, at least 36 must be taken beyond MS thesis and at NYU-Poly. A minimum of 30 graduate credits beyond the bachelor’s degree (not including PhD or MS thesis credits) are required in chemical engineering subjects and related subjects, of which at least 12 must be taken at NYU-Poly. Attendance is required at departmental seminars for at least four semesters.

To meet graduation requirements, students must have an overall B average in all courses, excluding thesis, and must not obtain more than two grades of C in required subjects. Candidates for the degree Doctor of Philosophy in Chemical Engineering should plan their programs in accordance with the following requirements:

Required Subjects: 12 credits, 3 credits each

CBE 6153 Applied Mathematics in Engineering

3 Credits This course covers mathematical formulation of chemical engineering problems in terms of ordinary and partial differential equations. Topics include solutions of boundary and initial value problems using Green’s functions and other techniques; characterization of second-order partial differential equations and properties of their solutions; asymptotic methods and numerical techniques.

Prerequisite(s): MA 2122 and MA 2132 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6333 Transport Phenomena

3 Credits The topics in this course include vector analysis review; diffusive fluxes; conservation equations for chemical species and thermal energy; boundary conditions; scaling and approximation techniques; solution methods for conduction and diffusion problems; transient unidirectional diffusion and conduction; momentum diffusion and viscous stress; conservation equation for momentum and the Navier-Stokes equations; unidirectional and lubrication flows; and low-Reynolds and high-Reynolds number flows.

Prerequisite(s): CBE 3313 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6733 Chemical Engineering Thermodynamics
3 Credits This course covers advanced treatment of phase and chemical equilibria; ideal and nonideal solutions; stability of thermodynamic systems; osmotic pressures; electrolyte solutions; solid-liquid equilibria; and biochemical applications.

Prerequisite(s): CBE 3153 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 6813 Chemical Reactor Analysis and Design

3 Credits The topics in this course include trends and issues in modern reactor design; kinetics of complex homogenous and heterogeneous reactions: determination of nonlinear kinetic parameters, effects of transport processes, and catalyst deactivation; analysis and design of reactors; laminar flow reactors; dispersion model; split boundary condition problems; effects of non-ideal flow on conversion; and fixed-bed, fluidized-bed and multiphase reactors.

Prerequisite(s): CBE 3223 or adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CBE 9910 Seminar in Chemical and Biomolecular Engineering

0 Credits Recent developments in chemical and biomolecular sciences and engineering are presented by engineers and scientists from industry and academia.

Note: Four semesters are required for PhD candidates.

CBE 9920 Seminar in Chemical and Biomolecular Engineering

0 Credits Recent developments in chemical and biomolecular sciences and engineering are presented by engineers and scientists from industry and academia.

Note: Four semesters are required for PhD candidates.

Electives: 18 Credits

At least three electives (9 credits) must be chosen from CBE 6003-CBE 9413.

The remaining courses may be chosen from other graduate programs with the approval of the graduate adviser in chemical engineering.

Thesis: 45 Credits

CBE 999X PhD Dissertation in Chemical & Biological Engineering

(45 credits total, each 3 credits) Credits Theses for the PhD degree must give results of independent investigations of problems in chemical engineering and may involve experimental or theoretical work. Theses must show ability to do creative work and must show that original contributions, worthy of publication in recognized journals, are made to chemical engineering. Candidates are required to take oral examinations on thesis subjects and related topics. Doctoral-degree candidates must submit
five unbound thesis copies to advisers before or on the seventh Wednesday before commencement.

Prerequisite(s): Passing grade for RE 9990 PhD Qualifying Exam, graduate standing, and dissertation advisor approval

Note:

Up to 9 credits of Master’s Thesis can be included here.

Total: 75 Credits

Note:

* CBE 9910/CBE 9920 must be taken for two years.

Department of Civil and Urban Engineering

Interim Head: Lawrence Chiarelli

Mission Statement

The mission of the Department of Civil and Urban Engineering is to produce graduates capable of contributing to and advancing the practice of civil engineering and its sub-disciplines.

The Department

The Department of Civil and Urban Engineering mission involves its faculty in a wide variety of state-of-the-art research and in the development of innovative curricula for the civil engineers of the 21st century.

Research is focused on developing and implementing intelligent infrastructure-monitoring technologies, including smart materials, and optimizing infrastructure system planning, design, operation and management. Sustainability is a critical objective function and overarching theme.

Through the department’s involvement in local, regional and national issues, students are exposed to a daily laboratory of infrastructure issues and projects all around them. The department participates in four major interdisciplinary research centers: The Urban Infrastructure Institute, the Urban Utilities Institute, the Transportation Research Institute and the Urban Security Initiative. Department research covers a broad range of topics, including highway capacity and level of service, remote monitoring of infrastructure elements and use, management of urban utilities, intelligent transportation systems technologies, construction materials properties and monitoring, urban infrastructure security and construction operations.

Faculty members teach undergraduate and graduate courses. The curriculum exposes students to instructors in the forefront of their fields; men and women who frequently work on projects and topics of current interest, often within the region. The full-time faculty is augmented by excellent adjunct faculty who teach specialty courses in areas of their expertise, bringing a strong practical element to the classroom.
Programs are well-rounded and balanced. They combine all necessary theoretical elements with a strong emphasis on design and application. Graduates are well-versed in state-of-the-art techniques and develop the skills needed to become leaders in the profession. Among these skills are the ability to communicate effectively in oral and written form and the ability to understand the context of civil engineering projects in a complex society.

Civil Engineering Profession

Civil engineers are responsible for planning, designing, constructing, maintaining and operating today’s infrastructures. These areas cover a wide range of urban and regional systems and functions, including buildings, roads, bridges, airports, rail systems, dams, irrigation systems, water supply systems, environmental ecosystems and solid- and liquid-waste treatment and disposal systems and processes. The civil engineer practices in a broad and exciting field with a major impact on society in general and on its infrastructure environment in particular.

Modern civil engineering also deals with rapidly expanding information technologies. These technologies monitor, control, operate and manage complex infrastructure systems. From smart buildings to remote monitoring of transportation, water supply, sewage and other infrastructures, the modern civil engineer applies information technologies to improve the quality of the infrastructure environment.

Degree Programs

The department’s undergraduate programs deliver a broad civil-engineering background to the engineer beginning a professional career. Graduate programs allow students to specialize in particular areas or sub-disciplines and to pursue general graduate work across several different areas. The department offers the following degree and certificate programs:

Bachelor of Science

- Civil Engineering, B.S.
- Construction Management, B.S.

Master of Science

- Civil Engineering, M.S.
- Construction Management, M.S.
- Environmental Engineering, M.S.
- Environmental Science, M.S.
- Transportation Management, M.S.
- Transportation Planning and Engineering, M.S.
- Urban Systems Engineering and Management, M.S.

Doctor of Philosophy
- Civil Engineering, Ph.D.
- Transportation Planning and Engineering, Ph.D.

**Advanced Certificates**

- Construction Management Graduate Certificate*
- Executive Construction Management (Exec 21) Graduate Certificate
- Traffic Engineering Graduate Certificate
- Transit Management Graduate Certificate
- Transportation Planning Graduate Certificate

*Offered in conjunction with the Department of Management

**Undergraduate Minor**

- Construction Management Minor

**Faculty**

**Professors**

**John C. Falcocchio**, PE, Professor of Transportation Planning and Engineering, Executive Director of the Urban Intelligent Transportation Systems Center
PhD, Polytechnic Institute of Brooklyn
*Travel demand forecasting, transportation system evaluation, planning and management*

**Fletcher H. (Bud) Griffis**, PE, Professor of Civil Engineering, Construction Management Program Director, Director of Center for Construction Management Technology
PhD, Oklahoma State University
*Building Information Modeling (BIM), model-based simulation, applications of operations research principles to construction, magnetic levitation (Maglev) transportation systems, dredging and dredged material disposal, infrastructure design, construction and management, engineering economics*

**Magued G. Iskander**, PE, Professor of Civil Engineering, Coordinator of Graduate Programs in Civil Engineering
PhD, University of Texas at Austin
*Foundation engineering, marine geotechnology, pile foundations, alternative foundations, geotechnical instrumentation and monitoring, transparent soils*

**Ian Juran**, Professor of Civil Engineering, Executive Director of Urban Infrastructure Institute, Director of the Urban Utilities Center
PhD, DSc, University of Paris IV, École Nationale de Ponts et Chaussées (France)
*Geotechnical engineering, soil improvement technologies, geosynthesis engineering, in-situ soil testing, urban systems engineering and management*

**Mohammad Karamouz**, PE, Research Professor of Environmental Engineering
PhD, Purdue University
*Environmental system management, surface and ground water hydrology, decision support systems (DSS), disaster management and urban water systems*

**Roger P. Roess**, Professor of Transportation Engineering
PhD, Polytechnic Institute of Brooklyn
*Highway capacity and level-of-service analysis, traffic control and operations, public transportation operations, transportation economics, engineering pedagogy*
Industry Professors

Lawrence Chiarelli, PE, Esq., Department Head and Industry Professor of Construction Management, Construction Management Program Director, Associate Director of the Center for Construction Management Technology
JD, Brooklyn Law School
ME, The Cooper Union
Construction law, risk management, program and construction management; structural engineering and cost estimating

Anne Dudek Ronan, PE, Industry Professor of Civil Engineering
PhD, Stanford University
Water resources engineering, groundwater flow and transport modeling, numerical modeling uncertainty, climate adaptation

Associate Professors

Masoud Ghandehari, Associate Professor of Civil Engineering
PhD, Northwestern University
Mechanics of fracture, durability of concrete structures, structural materials

Elena S. Prassas, Associate Professor of Transportation Engineering, Director of Transportation Programs
PhD, Polytechnic University
Traffic engineering, software systems and simulation for transportation applications, transportation economics, AI application

Industry Associate Professors

Andrew J. Bates, Industry Associate Professor of Construction Management, USAF Ret.
PhD, Polytechnic Institute of NYU
Strategic planning and construction operations, risk analysis, statics

Mohsen Hossein, Industry Associate Professor of Civil Engineering
PhD, McGill University
Geotechnical engineering, environmental geotechnology, environmental impact assessment

José M. Ulerio, Industry Associate Professor of Transportation Engineering
MS, Polytechnic University
Transportation and traffic engineering; collection, handling and analysis of large-scale transportation databases; highway capacity and quality of service analysis; travel demand forecasting; geometric design of highways

Lecturer

Roula Maloof, Lecturer of Civil Engineering
PhD, Polytechnic Institute of New York
Non-destructive evaluation, fracture mechanics, finite element analysis, stress analysis

Adjunct Lecturers

Construction Management and Engineering
Peter Amato, Adjunct Lecturer of Civil Engineering
MS, John Jay College
President, Site Safety, LLC

Ralph D. Amicucci, CCIM, CPM, Adjunct Lecturer of Civil Engineering
MS, New York University
MBA, Iona College

Pooyan Aslani, Adjunct Lecturer of Civil Engineering
PhD, Polytechnic University
Resource-constrained scheduling, building information modeling (BIM), risk analysis

Anthony F. Caletka, PE, CCM, CFCC, Adjunct Lecturer of Civil Engineering
BS, Syracuse University
Managing Director, Capital Projects & Infrastructure, PricewaterhouseCoopers

John F. Caruso, Adjunct Lecturer of Civil Engineering
BS, City College of New York
Principal, John F. Caruso Consultant

Salvatore Castelli, Adjunct Lecturer of Civil Engineering
MS, Manhattan College
Project Manager, G.S. Engineering, P.C.

March W. Chadwick, AIA, LEED AP
M.Arch., Georgia Institute of Technology
Principal, M.Arch Architects

Dominick J. Fickeria, Adjunct Lecturer of Civil Engineering
MS, Manhattan College
Vice President, Director of Construction Management, URS Corp.

Robert N. Harvey, PE, Adjunct Lecturer of Civil Engineering
MS, Massachusetts Institute of Technology
Executive Director, Lower Manhattan Construction Command Center

Robert Maffia, PE, Adjunct Lecturer of Civil Engineering
MBA, Columbia University
Senior Director, Construction Management, Real Estate Development and Facilities, NYU Langone Medical Center

Michael P. Meehan, Adjunct Lecturer of Civil Engineering
MS, New York Institute of Technology
Consolidated Edison Company of New York (Ret.)

Lewis Mintzer, Adjunct Lecturer of Civil Engineering
MBA, Pace University
Director of Marketing, URS Corp.

Robert Otruba, PE, Adjunct Lecturer of Civil Engineering
BS, Syracuse University
University Director, Forensic and Litigation Consulting, FTI

Ronald J. Pennella, Adjunct Lecturer of Civil Engineering
MS, Polytechnic University
Project Executive, StructureTone Inc.
Patrick Prancl, PE, Adjunct Lecturer of Civil Engineering
PhD, City University of New York
Project Manager, El Sol Contracting and Construction Corp.

Salvador Rozenberg, RPA, Adjunct Lecturer of Civil Engineering
EMBA, University of New Haven
Principal, Transaction Maintenance Company

Joel Sciascia, Esq., Adjunct Lecturer of Civil Engineering,
JD, Fordham Law School
MS, Arizona State University, Del Webb
School of Construction General Counsel, Pavarini McGovern LLC

Jeffrey S. Seigel, Esq., Adjunct Lecturer of Civil Engineering
JD, Pace University School of Law
Director Business Development and Marketing, Pavarini/StructureTone

Jerome White, PE, Adjunct Professor of Civil Engineering
BS, Polytechnic University
President, Jerome B. White PC

James Vandezande, AIA, Adjunct Lecturer of Civil Engineering
BS, New York Institute of Technology
Senior Associate, HOK

Exec 21 Program in Construction Management

Mark A. Bloom, Esq., Adjunct Lecturer of Civil Engineering
JD, Fordham University School of Law
Partner, Arent Fox LLP

Albert DiBernardo, Adjunct Lecturer of Civil Engineering
MS, Polytechnic University
Principal, Weidlinger Associates

Peter M. Chorman, AIA, LEED AP, Adjunct Lecturer of Civil Engineering
BS, New York Institute of Technology
Vice President, Jones Lang LaSalle America's, Inc.

Joseph M. Giglio, Adjunct Professor of Civil Engineering
PhD, Northeastern University
Senior Academic Specialist; Executive Professor of General Management Northeastern University Vice-chairman, Hudson Institute

Francis J. Lombardi, PE, Adjunct Lecturer of Civil Engineering
MS, Columbia University
Chief Engineer, Port Authority of New York and New Jersey (Ret.)

John E. Osborne, Esq., Adjunct Lecturer of Civil Engineering
JD, University of South Carolina Law Center
Partner, John E. Osborne, PC

Raymond R. Savino, Adjunct Lecturer of Civil Engineering
MBA, Bernard Baruch College
Chief Financial Officer, The DeMatteis Organizations
Luis M. Tormenta, PE, Adjunct Lecturer of Civil Engineering
BCE, Manhattan College
Vice-chairman and Chief Executive Officer, LiRo Group

Louis A. Tucciarone,Adjunct Lecturer of Civil Engineering
MSCE, University of California at Berkeley
Senior Vice-President, URS Corp.

Lou Venech, Adjunct Lecturer of Civil Engineering
BA, Columbia College
General Manager, Transportation Policy & Planning, Port Authority of New York and New Jersey

Environmental and Water Resources Engineering

Raoul Cardenas Jr., Adjunct Professor of Environmental Engineering
PhD, New York University

Joon Om, Adjunct Lecturer of Civil Engineering
PhD, Polytechnic University

Sungho Yoon, Research Scientist, Adjunct Professor of Civil Engineering
PhD, Polytechnic University

Structural and Geotechnical Engineering

Walid Aboumoussa, PE, Adjunct Professor of Civil Engineering
PhD, Polytechnic Institute of NYU
Partner, Antonucci & Associates, Architects & Engineers, LLP

Weihua Jin, PE, Adjunct Professor of Civil Engineering
PhD, Columbia University
Chief Scientist, IceStone, LLC

J. Jong Lou, PE, Adjunct Professor of Civil Engineering
PhD, Northwestern University
President, J. J. Lou Associates LLPC

Sri K. Sinha, PE, Adjunct Lecturer of Civil Engineering
MS, Polytechnic University
Director of Plant Improvements and Asset Management, Lucius Pitkin Inc.

Alfonso Whu, Adjunct Lecturer of Civil Engineering
MS, Polytechnic University

Transportation and Highway Engineering

Andrew Bata, Adjunct Professor of Civil Engineering
MS, Northwestern University
New York City Transit Authority

Philip A. Habib, PE, Adjunct Professor of Transportation Engineering
PhD, Polytechnic Institute of New York
President, Philip A. Habib Associates

Michael Horodniceanu, PE, Adjunct Professor of Transportation Engineering
PhD, Polytechnic Institute of New York
President, MTA Capital Construction Company
Richard Malchow, Adjunct Professor of Transportation Engineering  
MS, Union College  
Vice President, Management and Budget, Urbitran Associates

Raman Patel, Adjunct Lecturer of Transportation Engineering  
PhD, Polytechnic University

Genaro Sansone, Adjunct Lecturer of Transportation Engineering  
MBA, Iona College  
New York City Transit Authority

Faculty Emeriti

Alvin S. Goodman, PE, Professor Emeritus  
PhD, New York University

Alan H. Molof, Professor Emeritus  
PhD, University of Michigan

Civil Engineering

Program Advisers:
Roger P. Roess, Undergraduate  
José M. Ulerio, Undergraduate  
Magued G. Iskander, Graduate

Minor in Construction Management

An undergraduate Construction Management Minor enhances the capability of students who may seek employment in the construction industry or who may be interested in studying Construction Management at the graduate level.

Transfer Students and Credits

Potential transfer students should refer to the Institute guidelines in this catalog. The Department of Civil and Urban Engineering has established additional requirements and interpreted the Institute guidelines as indicated in this section. The 128-credit curriculum is fulfilled by combining transfer credits, credits by examination and courses taken at NYU-Poly. Transfer credits in mathematics, chemistry, physics, humanities and social sciences are evaluated by the Office of Academic Affairs with faculty guidance from specific departments. Transfer credits in civil engineering and other technical areas are evaluated by the faculty of the Department of Civil and Urban Engineering.

The length of time for a transfer student to complete the BS in Civil Engineering depends upon three factors:

1. The total number of transfer credits awarded;
2. The particular courses required to complete degree requirements; and
3. Enrollment status (part-time or full-time).

Transfer Notes
Transfer students should understand that they can be awarded transfer credits for courses with a C grade or better and then only for courses that are applicable toward the BS in Civil Engineering as described in this catalog.
A residency requirement also must be fulfilled. To earn a BS, a student must complete a minimum of 30 credits at NYU-Poly at the junior or senior level (courses numbered CE 3XXX or CE 4XXX). These credits must include the design project, CE 4814.

**Part-Time Students**

Students may register as part-time students (fewer than 12 credits a semester). Such students are advised, however, that the department does not offer many undergraduate courses in the evening and that part-time students must take most courses during the day. Part-time students should maintain close contact with their academic advisers to work out the details of course sequencing efficiently and effectively.

**Previous Curricula**

It is a generally accepted rule that students are subject to the requirements of the catalog in effect when they enrolled initially at NYU-Poly. In many cases, however, it will be easier to complete the current curriculum. Academic advisers work with students to make sure that they fulfill the proper requirements for graduation.

**Bachelors**

**Civil Engineering, B.S.**

**Undergraduate Program**

The Department of Civil Engineering develops engineering graduates capable of contributing to and advancing the practice of civil engineering and its subdisciplines. Through its research programs, the department strives to be at the forefront in selected areas in the development of new knowledge and applications in civil engineering. Through its educational programs, graduates will be well rounded in state-of-the-art techniques and will develop the skills needed to apply them in a complex profession. Among these skills are the abilities to communicate effectively in written and verbal form and understand the context of civil engineering projects in a complex society.

**Program Educational Objectives**

Program educational objectives relate to where the Department of Civil Engineering expects its graduates to be within three to five years of earning undergraduate degrees. NYU-Poly’s undergraduate program in civil engineering is strongly practice-oriented, heavily emphasizing design, to prepare students for entry-level positions in any civil engineering subdiscipline or for graduate study. While some graduates eventually may work in other professions, the specific educational objectives of the program are as follows:

1. For 75% of its graduates to be working in a responsible position in civil engineering or a closely-related profession (not including those who are engaged in full-time graduate study).
2. For 50% of its graduates to have advanced in their careers to a position of higher responsibility.
3. For 75% of its graduates to be engaged in some form of continuing education, including, but not limited to, graduate education, professional development programs, relevant short courses and seminars, in-house training programs or similar activities.
Program Outcomes

Program outcomes are those abilities and skills that graduates are expected to have upon graduation with a BS in Civil Engineering degree. For these, the Department has adopted the 11 fundamental outcomes specified by the Accreditation Board for Engineering and Technology (ABET). They cover the full breadth and depth of the abilities and skills needed by modern engineering professionals. They are listed below with brief discussions of how each relates to the civil engineering profession.

a. **An ability to apply knowledge of mathematics, science and engineering.** Virtually all of civil engineering involves the application of mathematics and basic sciences to the solution of real-world infrastructure problems. Fundamental engineering skills evolve directly from science and mathematics. Students are immersed in these applications across all subdisciplines of civil engineering.

b. **An ability to design and conduct experiments, as well as to analyze and interpret data.** Civil engineers must engage in a number of basic experiments, and be aware of how to collect, organize, report and interpret the results of basic experiments and direct field observations of infrastructure operations. In the program, students are exposed to a wide range of laboratory experiments, including experiments in fluid mechanics, material behavior under loading, soil properties and behavior and others. They also are exposed to the collection of field data related to environmental conditions and problems, highway and street traffic and the monitoring of structures.

c. **An ability to design a system, component, or process to meet desired needs within realistic constraints, such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability.** The program is heavily design-oriented. Several courses include full design-project laboratories, including Steel Design, Reinforced Concrete Design, Design of Traffic Facilities, Foundation Design and others. Many additional courses have design components, and all students finish their academic programs with a comprehensive group civil engineering capstone project. As the student progresses, the complexity of design applications increases, as do the number and breadth of practical constraints on potential solutions.

d. **An ability to function on multidisciplinary teams.** Modern engineering is not done by stand-alone engineers. Any significant project involves several engineers, perhaps with different engineering backgrounds, as well as non-engineers (planners, architects, financiers, managers, etc.). Students have the opportunity to work in teams in several courses, but particularly in the capstone design project.

e. **An ability to identify, formulate and solve engineering problems.** Engineers do not just solve problems brought to them by others. Engineers must spot problems before they become evident and describe them in terms that expedite their solution. As students progress through the program, they increase their participation in identifying and framing problems, as well as in developing comprehensive solutions.

f. **An understanding of professional and ethical responsibility.** All professionals must be keenly aware of their general and professional ethical responsibilities to society in general, and to others who require and pay for their services. Like many professions, engineers, and civil engineers in particular, have specific ethical codes issued by professional societies with which they must comply. General ethical considerations are discussed throughout the curriculum, and several courses have a strong focus on the basis for, and application of, professional ethical code.

g. **The ability to communicate effectively.** To be an effective professional in the modern world, one must be an effective communicator. Engineers must explain their views and solutions to problems in ways that can be understood clearly by other professionals and by the public. Modern communication involves written and oral forms, and a wide variety of electronic media. NYU-Poly students are exposed to, and are required to use, all of these methods to prepare for their careers.

h. **The broad education necessary to understand the impact of engineering solutions in a global, environmental and societal context.** Engineers do not solve problems in a vacuum. Everything engineering professionals do affects the world around them. In the modern world economy, the “world” includes local neighborhoods, regions, states, nations and, indeed, the world. Solutions must be couched in a firm understanding of the impacts they will have on the environment, the economy and society.

i. **A recognition of the need for, and an ability to engage in, lifelong learning.** The engineering profession changes rapidly with the technological world. While general principles tend to change slowly, the specific materials, analysis techniques and approaches to engineering change quite rapidly. The body of knowledge graduates leaves with must be updated constantly and expanded during their professional lives. The program provides opportunities for students to appreciate this need, and develop useful skills for self-learning, now and in the future.
Knowledge of contemporary issues. Engineering students study in a context in which local, regional and national infrastructure issues are in the forefront. Current issues and problems are discussed in virtually all courses, and students’ attention is called to immediate issues as they arise.

An ability to use the techniques, skills and modern engineering tools necessary for professional practice. The program is frequently updated to incorporate the latest approaches to engineering solutions, and to include the use of modern engineering tools. Important “tools” include a variety of computer programs for data analysis, simulation and design. Many course laboratories use the most up-to-date techniques and software packages available to engineering professionals.

Required Courses

The undergraduate curriculum provides a solid foundation in all major subdisciplines through required courses.

Four courses provide the engineering science and professional underpinnings for all subdisciplines: CE 2113 Statics, CE 2123 Mechanics of Materials, CE 2213 Fluid Mechanics and Hydraulics and CE 1002 Introduction to Civil Engineering. Structural engineering is covered in CE 3122 Structural Dynamics, CE 3133 Structural Analysis, CE 3143 Steel Design, CE 3163 Materials Engineering and CE 4183 Reinforced Concrete Design. The required environmental and water resources sequence includes CE 3223 Environmental Engineering I and CE 3243 Water Resources Engineering I. Soils engineering is covered in CE 3153 Geotechnical Engineering. Transportation Engineering is introduced in CE 2323 Traffic Engineering I and CE 3343 Design of Traffic Facilities. Because the department also has a full undergraduate program in Construction Management, civil engineering students must select two construction engineering courses from an approved list. All students take the capstone course, CE 4814 Civil Engineering Design.

Design is covered in many of these courses, exposing students to design in various subdisciplines. An introduction to design is provided by EG 1003 in the freshman year. Courses CE 3143, CE 3223, CE 3243, CE 3153, CE 3343 and CE 4183 all have significant design content. Most elective courses also have strong design components. All students must complete a 4-credit senior design project (CE 4814) during their senior year.

Thus, students have progressive design exposure in each program year.

Undergraduate elective courses are provided in structural, geotechnical, environmental, water resources, construction management and engineering. These allow students to gain significant depth in these areas. Selected students with sufficient grade point averages may take beginning graduate courses in these areas. Special topics courses are provided in each major subdiscipline and are offered as needed.

Communication skills are emphasized throughout the curriculum. The humanities and social sciences portions of the curriculum focus strongly on developing writing and oral skills. The freshman engineering program also includes substantial emphasis on oral presentations and written report assignments. CE 1002 Introduction to Civil Engineering includes numerous written assignments and oral presentations and encourages discussion. All courses with associated laboratories require written laboratory or project reports; many design courses require formal submission of design reports, some with oral presentations. The senior design-project experience includes many oral and written progress reports and is formally presented and defended as part of final submission.

Humanities and social sciences courses also help students to understand the societal context of their profession. CE 1002 Introduction to Civil Engineering reinforces this understanding with specific civil engineering references and provides a focused treatment of professional ethics. These aspects are also highlighted in other civil-engineering curriculum courses.

Other Requirements

The BS in Civil Engineering program has three additional requirements:
1. Because a sound foundation in Statics is essential to progress in civil engineering, students must achieve a grade of C or better in CE 2113 Statics to register for subsequent courses in the structures sequence: CE 2123 Mechanics of Materials, CE 3133 Structural Analysis, CE 3143 Steel Design, and CE 4183 Reinforced Concrete Design;

2. Since the capstone design course, CE 4814 Civil Engineering Design, requires a thorough understanding of all aspects of civil engineering, students must have a cumulative average of 2.0 or better in all civil engineering courses in order to enroll in it; and

3. To promote interest in professional registration, students must sit for the Fundamentals of Engineering (FE) exam, which is administered by the National Council of Examiners for Engineering and Surveying (NCEES). CE 4092 includes a 0-credit recitation that provides preparation for the exam. Students who are not legally eligible to hold a professional engineer’s (PE) license are exempt from this requirement, but should still take CE 4092.

Accreditation

The BS in Civil Engineering is accredited by the Accreditation Board for Engineering and Technology (ABET).

Curriculum

The curriculum for the BS in Civil Engineering is described in the tables that follow. Table 1 summarizes the curriculum and its requirements in subject-area categories. Table 2 summarizes elective courses in construction management, engineering and civil engineering. A typical four-year course of study for civil engineering majors is shown on the full-page chart at the end of this section.

Table 1: Curriculum for the BS in Civil Engineering

Mathematics: 16 Credits

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**

*4 Credits* This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.
Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Sciences: 17 Credits

CM 1004 General Chemistry for Engineers
4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics
This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1
- Science Basic Science Elective 3 Credits

General Engineering, Computer Science: 7 Credits

EG 1001 Engineering and Technology Forum

1 Credit In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

CS 1133 Engineering Problem Solving and Programming

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

Humanities and Social Science: 24 Credits
EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

- Humanities and Social Sciences Electives (6 courses) 18 Credits

Civil Engineering: 61 Credits

CE 1002 Introduction to Civil Engineering

2 Credits This course introduces the student to the profession and practice of civil engineering. The course has four primary components: (1) a review of the principal sub disciplines of civil engineering and their relationship to urban and regional infrastructure; (2) a review of professional ethics and the responsibilities of engineers to their profession and to the general public, which includes a detailed study and discussion of the American Society of Civil Engineers (ASCE) and National Society of Professional Engineers (NSPE) codes of practice, and the use of case studies for illustration and discussion; (3) the use of AutoCAD as a tool for computer-based drawings, and the use of spreadsheets to develop analytic algorithms to solve simple engineering problems; and (4) an introduction to the use of GIS. The course includes a laboratory on the use of AutoCAD, as well as on GIS. Each laboratory is 6-7 weeks long.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CE 2113 Statics

3 Credits This course covers: Vector treatment of static and dynamic equilibrium of particles and rigid bodies; equivalent forces and couple systems; distributed forces; static analysis of determinate trusses, frames and machines; friction; centroid and center of gravity, and moment of inertia.

Corequisite(s): PH 1013 or equivalent.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 2123 Mechanics of Materials
This course introduces basic principles of stress and strain in axial loading, shear, torsion and bending, along with principles of transformation of stress for design. Laboratory experiments provide hands-on experience.

**Prerequisite(s):** PH 1013 and CE 2113 or equivalents.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### CE 2213 Fluid Mechanics and Hydraulics

*3 Credits* This course examines the basic principles of fluid mechanics with beginning applications to hydraulic design. Topics include fluid properties, fluid statics, elementary fluid dynamics and Bernoulli equation, continuity, energy and momentum equations and fluid kinematics. Additional topics are laminar and turbulent flow, boundary layer characteristics, drag and lift concepts (flow over immersed bodies), dimensional analysis and fluid measurements.

**Prerequisite(s):** CE 2113 or equivalent.

Weekly Lecture Hours: 2.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

### CE 2323 Traffic Engineering I

*3 Credits* This course introduces the profession of traffic engineering and its components. The characteristics of road users, vehicles, highways and control devices and their impact on traffic operations are discussed. Quantification of traffic stream characteristics is treated in detail. The design and use of traffic control devices is covered, including a detailed treatment of traffic signal timing and design for both pre-timed and actuated signals. Coordination of signal systems on arterials and in networks is treated. A broad overview of highway traffic safety issues, policies, programs and mitigation measures are included.

**Prerequisite(s):** Sophomore status or permission of instructor.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### CE 3122 Structural Dynamics

*2 Credits* This course covers: Three-dimensional treatment of the kinetics of particles and rigid bodies using various coordinate systems; Newton’s law, work, energy, impulse and momentum; and an introduction to dynamics of one, two and multi-degree of freedom systems, with and without damping.

**Prerequisite(s):** CE 2113 or equivalent. **Corequisite(s):** CE 3133 or equivalent.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### CE 3133 Structural Analysis

*3 Credits* This course offers in-depth coverage of structural analysis techniques. Topics: analysis of statically determinate structures; deflection calculations using energy methods; analysis of statically indeterminate structures using superposition; influence lines; and slope deflection, moment distribution and matrix analysis of structures. Computer applications are included.

**Prerequisite(s):** MA 2012 and CE 2123; or CE 2113 with a grade of B+ or better.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

### CE 3143 Steel Design
3 Credits This course examines structural design principles and techniques. Topics: Design of steel tension members, beams and columns; design of beam-columns; and design of bolted and welded connections for steel design. The course includes a design laboratory in which students, working in groups, develop design projects.

Prerequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3153 Geotechnical Engineering

3 Credits This course covers: Introduction to soil mechanics and foundation engineering, including origin of soils; phase relationships; classification of soils; permeability; effective stress; seepage; consolidation; shear strength; slope stability; and bearing capacity.

Prerequisite(s): CE 2123 and CE 2213 or equivalents.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3163 Materials Engineering

3 Credits This course covers the mechanical behavior and durability of structural materials. Properties of steel, concrete, wood, asphalt and fiber composites are discussed. Material processing, optical metrology and stress analysis laboratories are conducted by students working independently and in groups on material preparation and evaluation topics.

Prerequisite(s): CE 2123 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3223 Environmental Engineering I

3 Credits This course introduces water and wastewater treatment. Topics: Stream assimilation and public health; introduction to air pollution and solid waste management; and laboratory analysis of water and wastewater samples and treatment process tests.

Prerequisite(s): CE 2213 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3243 Water Resources Engineering I

3 Credits This course provides a detailed overview of water resources engineering, including both analysis and design elements. Topics covered: open-channel flow; pipe networks; reservoir balances; hydrologic techniques; surface water and ground-water supplies; water demand; and development of water resources for multiple purposes.

Prerequisite(s): CE 2213 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3343 Design of Traffic Facilities

3 Credits This course introduces the design of traffic facilities with emphasis on highway design. Students will be introduced to the basic design concepts of horizontal and vertical alignment, super elevation and cross-section design. The course also covers fundamentals of intersection and interchange design, pavement design, design of parking facilities, as well as bikeway and
walkway design. Lectures are supplemented by a design laboratory.

Prerequisite(s): CE 2323, or equivalent, or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 4092 Leadership, Business Principles, Policy and Ethics in Civil Engineering

2 Credits This course is in seminar form and is required of all senior students in Civil Engineering. It focuses on various aspect of professional practice in civil engineering, and it augments and enriches the student’s educational experience, including the capstone design course. Topics include professional roles and responsibilities, professional registration and its importance, continuing education, engineering ethics, procurement of work, competitive bidding, quality-based selection processes and construction management. Students are also introduced to the design and construction processes used by federal, state and local agencies, as well as private owners. The course includes a no-credit recitation that prepares students for the Fundamentals of Engineering (FE) examination, which Civil Engineering students must take before graduation.

Prerequisite(s): Senior status or permission of instructor.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

CE 4183 Reinforced Concrete Design

3 Credits This course offers a detailed treatment of reinforced concrete design: Material properties, American Concrete Institute (ACI) load factors and design strength; shear and diagonal tension in beams; reinforced concrete columns; two way slabs; footings; shear walls; and torsion.

Prerequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 4814 Civil Engineering Design

4 Credits This is the senior Capstone design experience in civil engineering. A project (or projects) involving integration of the civil engineering sub-disciplines is described and presented. Working groups are established. All groups may work on a single project or several may be prescribed, depending upon the semester. Lectures cover project details and present specific design applications that may not have been included in other courses. Each group must submit a full design report and present it orally.

Prerequisite(s): CE 3143 and CE 3153 or equivalents. Corequisite(s): CE 3223 and CE 3243 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
- CE XXXX Construction Management and Engineering Electives (See Table 2) 6 Credits
- CEE XXXX Civil Engineering Electives (See Table 2) 6 Credits
- CE XXXX Construction Management and Engineering or Civil Engineering Elective (See Table 2) 3 Credits

Free Elective

- Free Elective 3 Credits

Total Credits for Degree: 128
Footnotes for Table 1

1 All students, except those who have earned a grade of 4 or 5 on the Calculus AB or BC AP Exam, take a mathematics placement examination. Students may be placed in an alternative course, which may not carry degree credit, based on the results of such placement examination. Students also may be advance-placed based upon AP or college math credit earned in high school. Students may substitute MA 1324, which includes two additional contact hours, for MA 1024.

2 Students may select a basic science elective from one of the following areas: biology, astrophysics and astronomy or geology and earth science.

3 Students must take six (6) elective courses in the humanities and social sciences. Consult the Technology, Culture and Society portion of the catalog for details. At least one humanities and social sciences elective must be a 3xxx/4xxx level course. At least one humanities and social sciences elective must be a writing-intensive course, labeled by “W.”

4 A free elective is any course in any department of NYU-Poly for which the student has the prerequisites.

Table 2: Approved Construction Management, Engineering and Civil Engineering Electives

Construction Management and Engineering Electives

**CE 1502 Leadership and Foundations of Construction Management**

*2 Credits* This course introduces the student to the profession of construction management. It focuses on the role of the construction manager and the fundamental concepts and terminology employed in planning, developing and constructing projects. Leadership, professional development, ethics and safety are emphasized.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 2504 Construction Modeling and Data Structures I**

*4 Credits* This course introduces architectural drafting and computer graphics. It capitalizes on state-of-the-art computer applications in managing construction. The course familiarizes the student with two-dimensional construction drawings that represent the current industry standard, and it propels the student towards the future by teaching the basics of three-dimensional (3-D) computer modeling. This course also introduces the use of the 3-D model with associated databases to manage construction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CE 2513 Construction Materials and Methods**

*3 Credits* This course covers the fundamental materials and methods used in constructing building and civil infrastructure projects. It also includes a laboratory that exposes students to commonly employed testing methods of construction materials.

Weekly Lecture Hours: 2.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
CE 2523 Contracts and Construction Documents

3 Credits This course covers the documents used in design and construction, including design and construction agreements, drawings and specifications, general and special conditions and others used for procurement and construction administration. The course also examines the relationships among the owner, designers, contractors and suppliers. Students have the opportunity to discuss quality, safety and business and professional ethics.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3503 Cost Estimating

3 Credits Students learn the classification of work, quantity surveying techniques and basic estimating principles applied to construction projects. Also addressed are contracts; specifications and other construction documents; and the identification and allocation of direct and indirect project costs, overhead and profit. Students are introduced to computer-based estimating techniques and software.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3513 Construction Scheduling

3 Credits Students learn to apply the Critical Path Method (CPM) to construction projects, using precedence diagram networks. The course covers sequencing, cost allocation, updating, cash flow, resource constraints and scheduling, manpower leveling and distribution, time-scale networks, lead and lag-time constraints, time-cost tradeoffs, overlap and other specific leading edge scheduling techniques. Students direct an entire project from planning through scheduling and control, both manually and through software.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3532 Construction Site Layout

2 Credits This course studies the practical applications of surveying and its relationship to site planning and design. The first portion of the course concentrates on land surveying concepts, including mathematics, horizontal and vertical control and angle measurement. The second portion of the course applies surveying data to site layout using traverses, area computations, property surveys, topography, and construction surveys for highway and building applications.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3541 Surveying

1 Credits This field laboratory introduces students to basic surveying practice, including the use of surveying equipment (wheels, tapes, levels and theodolites), measurement theory and computation, data accuracy and precision, and the field book to properly record data.
Prerequisite(s): CE 1502 or CE 1002.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3553 Non-Structural Building Systems

3 Credits This course introduces the students to mechanical, electrical and vertical transportation systems for buildings. It examines fundamental aspects of the design, procurement and construction of heating, ventilating and air conditioning (HVAC), supply and sanitary plumbing, fire detection and suppression, high- and low-voltage electrical, security, elevator and escalator and building management systems.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3563 Construction Modeling and Data Structures II

3 Credits This course is the continuation of the student’s exploration of construction management through building information modeling (BIM). The students will apply their understanding of construction assemblies, trade scheduling and estimating through studies of a larger project. Emphasis will be placed on the student's ability to model complex assemblies while coordinating and scheduling multiple trades. This progressive approach incorporates the 3D model and the associated databases in the management of construction by developing unit pricing, detailed scheduling and procurement attributes associated with a design.

Prerequisite(s): CE 2504.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 4503 Construction Engineering

3 Credits This course covers engineering fundamentals and developing trends in the use of excavating and earth-moving equipment, trucks, pumps, drilling and blasting equipment and cranes. Also considered are shoring and bracing and other temporary site construction operations.

Prerequisite(s): CE 1502 or CE 1002, and junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4513 Construction Project Administration

3 Credits This course examines the roles of the project participants in executing a construction project, focusing on delegating administrative duties and responsibilities and managing and coordinating the physical work and administrative control of project information and records. Students use computer-based project administration techniques and software.

Prerequisite(s): CE 1502 or CE 1002, and junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4533 Construction Law

3 Credits The course introduces students to areas of the law that they are likely to encounter in construction. Following an introduction to the legal system and form of legal analysis, areas addressed include contracts, procurement, scope definition, delays and acceleration, site conditions, warranties, termination, tort claims, dispute resolution and ethics.
Civil Engineering Electives

CE 3313 Introduction to Transportation Systems

3 Credits This course focuses on the fundamental conceptual elements of transportation systems and describes the approaches used to analyze and design transportation systems. The course covers the basic material about transportation systems, the context within which they operate and a characterization of their behavior.

Prerequisite(s): Junior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3353 A History of the NYC Transit System

3 Credits This course traces the technological history of public transportation in New York City and investigates its role in the development of the city, its economy and its social fabric. From the early days of horse-drawn public carriages to the modern subway system, the role of the public transit in the historical development patterns of New York City is treated. The course covers trolley systems, the age of the elevated railways and the subway system. Political, social and economic issues involved in the development of these critical infrastructures are discussed. Students develop independent project reports on aspects of the NYC public transit system, or on public transit systems in other major world cities.

Prerequisite(s): Junior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4033 Introduction to Urban Infrastructure Systems Management

3 Credits This course provides students with an overview of key issues involved in the planning, management, operations and maintenance of urban infrastructure systems, including transportation, water supply, power, communications and information systems. It includes elements of engineering and technology, management, economics, finance, regulatory and public policy that have an impact on the sustainable development of the urban environment. The course features several distinguished guest lecturers from infrastructure industries and public agencies who share significant case studies with students. The course includes a component on GIS, with a focus on how to collect, integrate and share spatial data in urban infrastructure management. Group projects are required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4043 Sustainable Cities

3 Credits The course provides an overview of issues that need to be addressed to make a city sustainable, beginning with a definition of what is intended by the concept of sustainability and a discussion of what is the essence of a city. Students are asked to become familiar with the major challenges in making a city sustainable, and to provide, as part of their homework, a paper addressing a topic covered by the course through research and, where necessary, proposed solutions.
CE 4053 Biosoma – Environmental Design of the City of the Future

3 Credits The goal of this course is to improve the engineering design of a city and its components. The course focuses on the city as an entity that concentrates living organisms, societal organizations and activities and machines, interacting with the environment both outside and inside the city. A number of essential questions about the future of cities will be examined, such as: (1) what does urbanization mean for the future of humankind in terms of resources, capabilities, ideologies and culture? (2) How can the design of cities affect their future? (3) What should be the role of the engineer? (4) How can the engineer of the future be prepared for that role? (5) What critical engineering interventions are needed to influence the future of today’s cities? Each student will select a project that deals with some aspects of the course and present its results to the class.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4173 Foundation Engineering

3 Credits This course introduces the development of foundation engineering, including: site exploration; soil sampling; interpretation of boring logs; bearing capacity of footings; settlement of structures; lateral earth pressure; design of retaining walls, braced excavations and sheet pile walls; and design of deep foundations.

Prerequisite(s): CE 3153 or equivalent.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 4193 Timber and Masonry Structures

3 Credits This course covers: Properties and classification of structural lumber; design of timber connectors; design and construction of residential and industrial timber buildings; beams, frames, columns and trusses of sawn lumber and glued laminated construction; manufacture and properties of concrete masonry units; properties of mortar and grout; and design and construction of load-bearing, reinforced and unreinforced masonry structural elements.

Prerequisite(s): CE 3143 or equivalent.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4333 Traffic Engineering II

3 Credits This is a second semester traffic engineering course for undergraduate students. It focuses on highway capacity and level of service analysis on uninterrupted and interrupted flow facilities. Additional analysis of signalized and unsignalized intersections is included using current computer software packages. Facility types include freeways, freeway weaving areas and ramp junctions, rural and suburban multilane highways, two-lane rural highways, suburban and urban arterials and intersections.

Prerequisite(s): CE 2323 or permission of instructor.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4253 Hydraulic Systems
3 Credits The application of basic principles of fluid mechanics and water resources in hydraulic engineering and design. Topics covered include: laminar and turbulent flow; boundary layer characteristics; subcritical and super critical flow; applications to pipe and open channel flow; pipe networks; hydraulic machinery and structures; river and canal systems and flood plains; safety; and reliability issues.

Prerequisite(s): CE 3243 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4273 Environmental Engineering II

3 Credits This course offers detailed coverage of water and wastewater treatment unit operations and includes a laboratory on processes and process design. Experiments are performed to evaluate laboratory-scale conventional water and waste treatment processes. Lectures cover detailed theory, design and advanced concepts.

Prerequisite(s): CE 2213 and CE 2323 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Additional electives for CE undergraduates are available from courses in the Construction Management curriculum. Consult the Construction Management section of the catalog.

Typical Course of Study for the Bachelor of Science in Civil Engineering

Freshman Year

Fall Semester: 15 Credits

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1004 General Chemistry for Engineers
4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 15 Credits

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 1013 Mechanics**

*3 Credits* This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

*Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s): EW 1013.*

**CS 1133 Engineering Problem Solving and Programming**

*3 Credits* This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

*Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

**CE 1002 Introduction to Civil Engineering**

*2 Credits* This course introduces the student to the profession and practice of civil engineering. The course has four primary components: (1) a review of the principal subdisciplines of civil engineering and their relationship to urban and regional infrastructure; (2) a review of professional ethics and the responsibilities of engineers to their profession and to the general public, which includes a detailed study and discussion of the American Society of Civil Engineers (ASCE) and National Society of Professional Engineers (NSPE) codes of practice, and the use of case studies for illustration and discussion; (3) the use of AutoCAD as a tool for computer-based drawings, and the use of spreadsheets to develop analytic algorithms to solve simple engineering problems; and (4) an introduction to the use of GIS. The course includes a laboratory on the use of AutoCAD, as well as on GIS. Each laboratory is 6-7 weeks long.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
Sophomore Year

Fall Semester: 16.5 Credits

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 2021 Introductory Physics Laboratory I**

*0.5 Credits* This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**PH 2023 Electricity, Magnetism and Fluids**

*3 Credits* This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**CE 2113 Statics**
3 Credits This course covers: Vector treatment of static and dynamic equilibrium of particles and rigid bodies; equivalent forces and couple systems; distributed forces; static analysis of determinate trusses, frames and machines; friction; centroid and center of gravity, and moment of inertia.

Corequisite(s): PH 1013 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 2323 Traffic Engineering I

3 Credits This course introduces the profession of traffic engineering and its components. The characteristics of road users, vehicles, highways and control devices and their impact on traffic operations are discussed. Quantification of traffic stream characteristics is treated in detail. The design and use of traffic control devices is covered, including a detailed treatment of traffic signal timing and design for both pre-timed and actuated signals. Coordination of signal systems on arterials and in networks is treated. A broad overview of highway traffic safety issues, policies, programs and mitigation measures are included.

Prerequisite(s): Sophomore status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Humanities and Social Sciences Elective I 3 Credits

Spring Semester: 15.5 Credits

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 2123 Mechanics of Materials

3 Credits This course introduces basic principles of stress and strain in axial loading, shear, torsion and bending, along with principles of transformation of stress for design. Laboratory experiments provide hands-on experience.
CE 2213 Fluid Mechanics and Hydraulics

This course examines the basic principles of fluid mechanics with beginning applications to hydraulic design. Topics include fluid properties, fluid statics, elementary fluid dynamics and Bernoulli equation, continuity, energy and momentum equations and fluid kinematics. Additional topics are laminar and turbulent flow, boundary layer characteristics, drag and lift concepts (flow over immersed bodies), dimensional analysis and fluid measurements.

Prerequisite(s): CE 2113 or equivalent.
Weekly Lecture Hours: 2.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

- Science Elective 3 Credits
- Humanities and Social Sciences Elective II 3 Credits

Junior Year

Fall Semester: 18 Credits

MA 2222 Data Analysis II

This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3133 Structural Analysis

This course offers in-depth coverage of structural analysis techniques. Topics: analysis of statically determinate structures; deflection calculations using energy methods; analysis of statically indeterminate structures using superposition; influence lines; and slope deflection, moment distribution and matrix analysis of structures. Computer applications are included.
Prerequisite(s): MA 2012 and CE 2123; or CE 2113 with a grade of B+ or better.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 3122 Structural Dynamics

2 Credits This course covers: Three-dimensional treatment of the kinetics of particles and rigid bodies using various coordinate systems; Newton’s law, work, energy, impulse and momentum; and an introduction to dynamics of one, two and multi-degree of freedom systems, with and without damping.

Prerequisite(s): CE 2113 or equivalent. Corequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3223 Environmental Engineering I

3 Credits This course introduces water and wastewater treatment. Topics: Stream assimilation and public health; introduction to air pollution and solid waste management; and laboratory analysis of water and wastewater samples and treatment process tests.

Prerequisite(s): CE 2213 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3163 Materials Engineering

3 Credits This course covers the mechanical behavior and durability of structural materials. Properties of steel, concrete, wood, asphalt and fiber composites are discussed. Material processing, optical metrology and stress analysis laboratories are conducted by students working independently and in groups on material preparation and evaluation topics.

Prerequisite(s): CE 2123 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

Humanities and Social Sciences Elective III 3 Credits

Spring Semester: 18 Credits

CE 3153 Geotechnical Engineering

3 Credits This course covers: Introduction to soil mechanics and foundation engineering, including origin of soils; phase relationships; classification of soils; permeability; effective stress; seepage; consolidation; shear strength; slope stability; and bearing capacity.

Prerequisite(s): CE 2123 and CE 2213 or equivalents.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3143 Steel Design
3 Credits This course examines structural design principles and techniques. Topics: Design of steel tension members, beams and columns; design of beam-columns; and design of bolted and welded connections for steel design. The course includes a design laboratory in which students, working in groups, develop design projects.

Prerequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3343 Design of Traffic Facilities

3 Credits This course introduces the design of traffic facilities with emphasis on highway design. Students will be introduced to the basic design concepts of horizontal and vertical alignment, super elevation and cross-section design. The course also covers fundamentals of intersection and interchange design, pavement design, design of parking facilities, as well as bikeway and walkway design. Lectures are supplemented by a design laboratory.

Prerequisite(s): CE 2323, or equivalent, or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 3243 Water Resources Engineering I

3 Credits This course provides a detailed overview of water resources engineering, including both analysis and design elements. Topics covered: open-channel flow; pipe networks; reservoir balances; hydrologic techniques; surface water and ground-water supplies; water demand; and development of water resources for multiple purposes.

Prerequisite(s): CE 2213 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  • CE Construction Management Elective 3 Credits
  • Humanities and Social Sciences Elective IV 3 Credits

Senior Year

Fall Semester: 14 Credits

CE 4183 Reinforced Concrete Design

3 Credits This course offers a detailed treatment of reinforced concrete design: Material properties, American Concrete Institute (ACI) load factors and design strength; shear and diagonal tension in beams; reinforced concrete columns; two way slabs; footings; shear walls; and torsion.

Prerequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 4092 Leadership, Business Principles, Policy and Ethics in Civil Engineering
This course is in seminar form and is required of all senior students in Civil Engineering. It focuses on various aspects of professional practice in civil engineering, and it augments and enriches the student's educational experience, including the capstone design course. Topics include professional roles and responsibilities, professional registration and its importance, continuing education, engineering ethics, procurement of work, competitive bidding, quality-based selection processes and construction management. Students are also introduced to the design and construction processes used by federal, state and local agencies, as well as private owners. The course includes a no-credit recitation that prepares students for the Fundamentals of Engineering (FE) examination, which Civil Engineering students must take before graduation.

Prerequisite(s): Senior status or permission of instructor.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3
- CE Civil Engineering Elective I 3 Credits
- Free Elective I 3 Credits
- Humanities and Social Sciences Elective V 3 Credits

Spring Semester: 16 Credits

CE 4814 Civil Engineering Design

4 Credits This is the senior Capstone design experience in civil engineering. A project (or projects) involving integration of the civil engineering sub-disciplines is described and presented. Working groups are established. All groups may work on a single project or several may be prescribed, depending upon the semester. Lectures cover project details and present specific design applications that may not have been included in other courses. Each group must submit a full design report and present it orally.

Prerequisite(s): CE 3143 and CE 3153 or equivalents. Corequisite(s): CE 3223 and CE 3243 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
- Two (2) CE Civil Engineering/Constructive Management Electives 6 Credits total
- Humanities and Social Sciences Elective VI 3 Credits
- Civil Engineering Elective 3 Credits

Total credits required for graduation: 128

Masters

Civil Engineering, M.S.

Master of Science Program in Civil Engineering

The Master of Science in Civil Engineering allows students to specialize in one of the following six areas of concentration:
• Structural Engineering
• Geotechnical Engineering
• Environmental and Water Resources Engineering
• Urban Systems Engineering and Management
• Highway and Traffic Engineering

Students also may elect to follow a general program by taking two courses across several areas of concentration. The Department of Civil Engineering also offers graduate programs in transportation planning and engineering and transportation management (see the Transportation section in this catalog), environmental science and engineering (see Environmental Science and Engineering section in this catalog), construction management and engineering (see the Construction Management section of this catalog), and urban systems engineering and management (see Urban Systems Engineering and Management section in this catalog).

Goals and Objectives

The degree MS in Civil Engineering prepares graduates to practice their profession at an advanced level. Specific program objectives are to provide the skills and knowledge necessary to:

• Specialize in one of the primary subdisciplines of civil engineering or to achieve depth across a number of the subdisciplines;
• Design and analyze civil engineering infrastructure;
• Understand civil engineering materials, technologies and processes as applied to modern civil engineering infrastructure;
• Obtain civil engineering project management skills; and
• Provide a basis for continued, lifelong learning in the civil engineering profession.

Admission

Students seeking admission to the MS program should hold a bachelor’s degree in civil engineering from a program accredited by the Accreditation Board for Engineering and Technology (ABET) and have a 3.0 GPA or better. Applicants lacking a BS from an ABET-accredited program in civil engineering (including those possessing undergraduate degrees in other engineering disciplines, engineering science, engineering technology and architecture, or from a foreign university) have their qualifications reviewed by a graduate adviser. Admission may be granted and may include the requirement for additional undergraduate courses to correct deficiencies. These additional courses are not counted toward the MS degree, nor are undergraduate courses included in computing graduate grade-point averages.

Applicants from universities outside the United States should take the Graduate Record Examination (GRE advanced tests) and achieve a minimum grade of 700 on the quantitative section. They also must take the Test of English as a Foreign Language (TOEFL) and achieve a minimum grade of 550/213/79 (paper/CBT/IBT). In rare cases, the department head may waive the GRE and/or TOEFL after a graduate adviser examines the student’s transcripts and interviews the candidate.

Foreign candidates who meet all other admission requirements but who fail to satisfy the TOEFL requirement may be required to take one or more remedial courses in English before admission.

Grade Requirements

To earn a MS degree from NYU-Poly, students must maintain a B average (3.0 GPA) or better in (1) all graduate courses taken at NYU-Poly, (2) all graduate courses taken in the Department of Civil Engineering and (3) all graduate guided studies (readings, project, thesis). Poor scholastic performance (under 3.0 GPA) may lead to a student being placed on graduate probation. If students’ grades do not improve, they may be disqualified from further graduate study in the department. Students may repeat a
course with their adviser’s approval. When a course is repeated, only the later grade counts toward the GPA. If a course is repeated more than once, only the first grade is dropped from the GPA computation.

In the event that an applicant is required to take undergraduate prerequisite courses as a condition of admission, a grade of B- or better is required for every prerequisite course taken, and the cumulative GPA of all required prerequisite courses must be at least 3.0.

**Advising**

Students are responsible for following the departmental rules outlined in this catalog. While academic advisers consult with and advise students, students are responsible for ensuring that all degree requirements are fulfilled and for submitting all proper forms and applications.

Students must meet with an academic adviser when they first enroll. Students must have a detailed program of study formally approved by an academic adviser before registration.

The academic adviser also handle requests for waivers of certain degree requirements, where warranted. Such waivers must be in writing and must be entered into the student’s departmental record. Where specific courses are waived, approval of the course instructor may also be required. When waivers are granted, students may be required to take other specific courses in their place or to select additional electives. Students registering for guided studies (readings, projects, theses) are assigned advisers for each such activity. To register for guided study, students must submit written proposals for the topic(s) to be covered to such advisers before registration. To register, students must obtain written approval of the project adviser and the academic adviser.

**Transfer Credits**

The residency requirement for the MS degree is 24 credits. Students may transfer up to 6 credits of acceptable courses toward a MS degree, subject to their academic adviser’s approval. To be transferred, the course(s) must relate to the student’s program and be from an accredited institution. A grade of B or better is required for granting of transfer credit. Courses graded on a pass/fail basis are not considered for transfer unless accompanied by a detailed written evaluation by the course instructor. All transfer requests must be accompanied by an official transcript from the transferring institution. Applications for transfer credits are accepted only after the student has earned 9 credits at NYU-Poly.

Validation credits by examination may not be used toward any civil engineering graduate degree program.

**Degree Requirements**

All MS (Civil Engineering) students must complete either the single area of concentration or general program requirements as described in Table 3:

**Table 3: Avenues for Obtaining MS (Civil Engineering)**

Students Selecting a Single Area of Concentration

| Core Courses: | 12 credits (min.) |
| Courses Within Concentration: | 12 credits (min.) |
| Technical Electives: | 6 credits |

Students Selecting the General Program
Core Courses: 12 credits (min.)

Two Courses in each of 3 Concentration Areas: 18 credits (min.)

Credits Required for MS Degree: 30 credits

A. Core Courses: 12 Credits

Students must complete at least four of the following six core courses.

Table 4: Core Courses in Civil Engineering

**CE 6023 Materials for Civil Engineers**

*3 Credits* This course covers: Materials composition and production of cementitious materials; polymeric composites and metals; mechanical properties subject to short-term and long term loads, impact and fire; fatigue and fracture; transport properties, chemical degradation and long-term durability.

Prerequisite(s): Graduate Status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 6073 Instrumentation, Monitoring and Condition Assessment of Civil Infrastructure**

*3 Credits* This course covers: A systematic approach to planning and executing instrumentation, monitoring and condition assessment programs; strain measurements; civil engineering sensors (static, dynamic, optical); environmental measurements; mechatronic sensors; signal conditioning, information measurements and error analysis; business aspects; advanced-measurement systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7673 Environmental Impact Assessment**

*3 Credits* This course examines legal and technical requirements in preparing environmental impact statements. Considerations include legal and technical requirements, the procedure and the interdisciplinary nature of the analysis. Topics include overall impact evaluation, categories of impacts, problem definition, quantification of impact, methods used in analysis, field evaluations, mitigations, hearing procedures and management. Practical examples and case studies are used.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7843 Introduction to Urban Systems Engineering**

*3 Credits* This course provides a descriptive overview of key infrastructure systems and technologies that must be managed, operated and maintained. Systems treated include buildings and structures, water supply, solid and liquid waste handling and disposal, transportation, power, communications and information systems, health and hospitals, police and preprotection. The course explores the financial, political, administrative, legal and institutional settings of these systems and technologies. A
portion of the course features distinguished guest lecturers who are experts in some of the systems and technologies included.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8253 Project Management for Construction

3 Credits This course covers topics specific to developing and coordinating large projects, including organizational structures, management functions, pricing and estimating project costs, bidding and contracting, risk allocation, scheduling, time and cost control, labor relations, quality management and project life-cycle activities.

Also listed under: MG 8253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8283 Risk Analysis

3 Credits This course investigates the ever-rising importance of risk analysis in project management. Topics: Analysis of qualitative and quantitative risk; techniques in probability analysis, sensitivity analysis, simulation of risk and utility theory; and computational methods for calculating risk. Students are exposed to the complexity of real-world corporate and public problems through case investigations.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

B. Concentration Area Courses: 12 to 18 Credits

Students selecting a single area of concentration must complete: (1) at least one core course in their concentration area; and (2) at least four additional concentration area courses. The course requirements of various concentration areas are listed in Tables 3-8. All students must satisfy all course prerequisites.

C. Technical Electives: 0 to 6 Credits

Depending upon the choice of a concentration, area, a student may have up to an additional 6 credits of course work, which may be satisfied from the following:

Electives:

Electives are normally selected from the courses given by the Department of Civil Engineering. However, electives may be selected from courses offered by other departments with written consent of the graduate adviser.

Project:

CE 9963 MS Project in Civil & Urban Engineering

3 Credits This project involves analytical, design or experimental studies in civil engineering guided by a faculty adviser and following departmental guidelines. A written report is required.
Prerequisite(s): Degree status and project adviser’s approval.

Thesis:

- CE 9973 Thesis for MS in Civil Engineering 6 Credits

Table 5: Geotechnical Engineering Concentration

Select at least four courses from:

**CE 8423 Ground Improvement**

3 Credits This course discusses foundation engineering practice, foundation rehabilitation and emerging ground-improvement technologies. Topics covered are the selection, design and analysis of ground-improvement techniques for different foundation problems, as well as the construction, monitoring and performance evaluation of such solutions.

Prerequisite(s): CE 3153 and CE 4173 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8663 Advanced Foundation Design**

3 Credits Topics covered: Advanced analysis of foundations, shallow foundations, bearing capacity, settlement, deep foundations, axial and lateral loading of piles, wave equation analysis, drilled piers, design and construction issues and case histories.

Prerequisite(s): CE 3143 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8673 Excavation Support Systems**

3 Credits This course covers advanced analysis of foundations, shallow foundations, bearing capacity, settlement, deep foundations, axial and lateral loading of piles, wave-equation analysis, drilled piers and design and construction issues.

Prerequisite(s): CE 3153 and CE 4173 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8403 Geotechnics and Geomaterials**

3 Credits This course examines index properties of soil, mechanical behavior, shear strength, stress-strain characteristics, drained and undrained soil behavior, permeability, seepage, groundwater flow and control and consolidation of soils.

Prerequisite(s): CE 3153 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8433 Urban Geotechnology**
This course looks at case histories on geotechnical design, construction and rehabilitation in the urban environment. Topics covered: Special construction problems and innovative solutions; unforeseen ground conditions performance monitoring; remedial planning and implementation; and geotechnical design and construction issues from a practicing engineer’s perspective.

Prerequisite(s): CE 3153 and CE 4173 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8493 Environmental Geotechnology**

3 Credits This course covers: Clay mineralogy; soil water interaction processes; chemical transport through soils; hydraulic conductivity, diffusion and attenuation mechanisms; water-disposal systems; design of land-fills, seepage barriers and cut-off walls; geo-environmental site characterization techniques; and soil remediation techniques.

Prerequisite(s): CE 3153 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7233 Groundwater Hydrology and Pollution**

3 Credits This course looks at the characteristics of confined and unconfined flow of water through porous media; groundwater and well hydraulics; quality of groundwater; environmental influences; groundwater pollution; management aspects of groundwater and groundwater modeling.

Prerequisite(s): CE 2213 or equivalent, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8603 Selected Topics in Geotechnical Engineering**

3 Credits This course explores current special interest topics, such as ground improvement, geotechnical earthquake engineering, site characterization and remediation. Topics vary with each offering and are disseminated before registration.

Prerequisite(s): CE 4173 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Table 6: Structural Engineering Concentration**

**CE 6013 Theory of Structural Analysis and Design**

3 Credits This course discusses theories of structural analysis and their relationship to design. Topics: Classical structural mechanics, matrix procedures and numerical methods in problem-solving; and analysis of statically indeterminate beams, frames and trusses using force and displacement methods. Also considered are elastic supports, movement of supports and temperature effects.

Prerequisite(s): CE 3133 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 6163 Finite Element Methods

3 Credits Students study the basic theory of the finite element method and learn how to apply it using widely used engineering programs. The course emphasizes developing finite element models and executing the analysis. Students learn to recognize modeling errors and inconsistencies that could lead to either inaccurate or invalid results.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6033 Selected Topics in Structural Analysis I

3 Credits This course discusses special current interest topics. It is offered at irregular intervals by advance announcement. Graduate advisers may approve repeat registration for different topics.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6043 Selected Topics in Structural Analysis I

3 Credits This course discusses special current interest topics. It is offered at irregular intervals by advance announcement. Graduate advisers may approve repeat registration for different topics.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6063 Bridge Engineering

3 Credits This course covers types of bridges; geometric design of bridges; construction materials and techniques; simplified bridge analysis; special problems in the design of steel and reinforced-concrete bridges; bridge inspection policies; bridge rehabilitation procedures; bridge management systems; and the effects of wind and earthquakes on long-span bridges.

Prerequisite(s): Undergraduate structural analysis and steel design.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6133 Stability of Structures

3 Credits This course addresses the stability of structural systems. Topics: Investigation of buckling of structural configurations composed of beams, plates, rings and shells; effects of initial geometric imperfections, load eccentricities and inelastic behavior; and the application of energy measures and numerical techniques.

Prerequisite(s): Adviser’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6143 Steel Structures
This course explores compression members; elastic and inelastic buckling of columns and plates; lateral support of beams; torsion of open and closed sections; warping; lateral torsional buckling of beams; and bi-axial bending. Other topics include: Plate girders, including stability of webs and flanges; combined bending and axial load; instability analysis; and design of rigid and semi-rigid mechanisms of continuous beams and rigid frames. Both elastic and plastic design criteria are discussed.

Prerequisite(s): CE 3143 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6183 Concrete Structures

3 Credits This course covers design principles and construction methods for reinforced and pre-stressed concrete structural elements; response of members subject to axial loading, shear and flexure; design of columns, deep beams and shear walls; design and detailing for connection regions; design of pre-tensioned and post-tensioned beams and slabs; and the effect of short-term and long-term deformations.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6193 Wind and Earthquake Engineering

3 Credits This course examines characteristics of wind and earthquake loads; atmospheric motions and boundary layer theory; response of structures to wind forces; code treatments of wind loads on structures; calculation of lateral forces from seismic events; lateral force-resisting systems; diaphragms and center of rigidity; response spectrum and time-history; ductility; concrete and steel frame structures; braced frames; shear walls; dual systems; story drift; detailing requirements.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Table 7: Construction Management and Engineering Concentration

Graduate Construction Management and Engineering courses, including Exec 21 courses, listed are in the Construction Management section of this catalog.

Table 8: Environmental/Water Resources Engineering Concentration

Select at least four courses from:

CE 7223 Hydrology

3 Credits This course covers: Hydraulic cycle; meteorological considerations; analysis of precipitation, runoff, unit hydrographs, flood routing and reservoir storage; principles of groundwater hydrology; and an introduction to frequency analysis of floods and droughts.

Prerequisite(s): Adviser’s approval and MA 1124 and CE 2213 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7233 Groundwater Hydrology and Pollution
This course looks at the characteristics of confined and unconfined flow of water through porous media; groundwater and well hydraulics; quality of groundwater; environmental influences; groundwater pollution; management aspects of groundwater and groundwater modeling.

**Prerequisite(s):** CE 2213 or equivalent, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7373 Environmental Chemistry and Microbiology**

3 Credits This course introduces the chemistry and microbiology of polluted and natural waters, including applications of principles developed.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**CE 7423 Water and Wastewater Treatment**

3 Credits This course covers the physical, chemical and biological principles of process design and treatment of water and wastewater. Topics include aeration, filtration, softening, chemical treatment, coagulation, occlusion, desalination, and taste and odor control.

**Corequisite(s):** CE 7373.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7353 Selected Topics in Water Resources and Hydraulic Engineering I**

3 Credits This course examines topics of current interest in water resources and hydraulic engineering. Topics vary with each offering and are disseminated before the semester of offering.

**Prerequisite(s):** Instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7393 Advanced Environmental Chemistry and Microbiology**

3 Credits This course explores advanced topics in chemistry and microbiology of polluted and natural wastewater treatment.

**Prerequisite(s):** CE 7373 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7433 Advanced Water and Wastewater Treatment**

3 Credits This course covers further the processes discussed in CE 7423. Topics include sedimentation, adsorption, aerobic and anaerobic biological treatment, sludge treatment and disposal.

**Prerequisite(s):** CE 7423. **Corequisite(s):** CE 7393.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 7453 Water and Wastewater Treatment Laboratory

3 Credits This laboratory course covers processes in water and wastewater engineering, dealing with physical, chemical and biological methods and principles. Processes include disinfection, softening, sedimentation, oxygen transfer, coagulation, adsorption, filtration and aerobic and anaerobic biological treatment systems and Warburg analysis of waste.

Corequisite(s): CE 7433.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 0

CE 7473 Analysis of Stream and Estuary Pollution

3 Credits This course covers dispersal and decay of contaminants introduced into lakes, streams, estuaries and oceans, and the effects of pollutants on chemical quality and ecology of receiving waters.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7533 Hazardous/Toxic Waste Management

3 Credits This course looks at methods in the management of hazardous/toxic waste sites. Topics covered include health and safety, legal aspects, contamination of the environment, treatment processes and toxicology and risk assessment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7703 Solid Waste Management

3 Credits This course covers engineering aspects of solid waste collection, transport and disposal, including incineration, sanitary landfill, composting, recovery and reutilization. Also covered is the economic evaluation of factors affecting selection of disposal methods.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7753 Environmental Systems Management

3 Credits This course provides an overview of information technologies as applied to the remote sensing of environmental infrastructure systems, and includes the development of infrastructure system databases to assist complex decision-making on environmental infrastructures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8493 Environmental Geotechnology

3 Credits This course covers: Clay mineralogy; soil water interaction processes; chemical transport through soils; hydraulic conductivity, diffusion and attenuation mechanisms; water-disposal systems; design of land-fills, seepage barriers and cut-off walls; geo-environmental site characterization techniques; and soil remediation techniques.
Prerequisite(s): CE 3153 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Table 9: Highway and Traffic Engineering Concentration

Select at least four courses from:

**TR 6313 Traffic Control and Signalization I**

3 Credits
Traffic controls are imposed to provide for safe, efficient and orderly movement of people and goods on our nation’s street and highway systems. Traffic control is examined in the urban context in which both vehicles and pedestrians be accommodated. Techniques for quantifying traffic stream behavior are described. Federal, state and local standards for designing and implementing control devices are presented. Selection of control measures, design and timing of traffic signals at individual intersections and in arterial networks is treated in detail. Use and application of current computer tools – HCS++ and Synchro – are illustrated.

Prerequisite(s): TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6323 Traffic Control and Signalization II**

3 Credits
In furtherance of the material covered in TR 6313, emphasis is on the arterial as a facility and on systems concepts such as traffic calming, access management and roundabouts as a design element. Also covered are network problems induced by traffic congestion and remedies such as critical intersection control, network metering, oversaturated control policies and real time sensing, and traffic impacts from growth and development, including assessment and mitigation. The course employs the use of modern tools, including VISSIM, Synchro/SIMTraffic and HCS++, and two projects must be completed by students working in teams. This course should be taken in the student’s last or penultimate semester.

Prerequisite(s): TR 6313 or equivalent and TR 6113 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6013 Fundamental Concepts in Transportation**

3 Credits
This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.

Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6023 Analytic Methods in Transportation**

3 Credits
This course introduces transportation students to a variety of analytic techniques as they are commonly applied to transportation issues. The course covers basic statistics and statistical analyses and their application to transportation studies, including traffic characteristics studies and survey instruments. Mathematical techniques for analyzing transportation queues are covered. Statistical tests for significance of improvement impacts are illustrated. Regression analysis applied to developing
transportation models is covered. An introduction into traffic simulation is also given.

**Prerequisite(s): TR 6013 or permission of adviser.**
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6223 Intelligent Transportation Systems and Their Applications**

3 Credits This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

**Prerequisite(s): TR 6013 or permission of adviser.**
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7033 Transportation Safety and Security**

3 Credits Technology, legislation and market forces have contributed to improved transportation safety for decades. But one must consider which metrics are most relevant for which modes, the role of demographics and traffic levels and other factors when analyzing and predicting safety trends. The course pays attention to a systems view, to metrics by mode and to both standard field and statistical analyses. Consistent with current priorities, the course addresses security as well as safety issues.

**Prerequisite(s): TR 6013 or permission of adviser.**
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7123 Transportation Planning and Congestion Management**

3 Credits This course provides a contextual understanding of urban transportation planning and its component activities. It helps students understand the enabling environment needed to sustain the planning process; to understand the causes of transportation congestion and its impacts on transportation users and communities; to set forth a vision for congestion management; and to develop and evaluate strategies and policies that achieve the vision.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7323 Design of Parking and Terminal Facilities**

3 Credits This course covers design techniques and approaches to a variety of pedestrian and vehicular needs in conjunction with access to land functions. Parking serves as the primary access interface to many land facilities, from shopping centers and sports facilities, to medium- and high-density residential developments. The planning and design of parking facilities, and the planning of access and egress from these facilities, is critical to the economic success of a development. Terminals are inter-modal interface facilities involving the transfer of people and/or goods from one mode of transportation to another. This course covers essential elements of terminal planning and design, including transit stations and terminals, major goods terminals at ports and railheads and others. The design of pedestrian space and ways within terminal structures is also treated.

**Prerequisite(s): TR 6013 or permission of adviser.**
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
TR 7343 Urban Freeways and Intercity Highways

3 Credits This course focuses on the design, analysis, control and management of urban freeways and intercity highways of all classes. The course covers geometric design standards and principals, the application of highway capacity and level of service analysis methodologies (including HCS++), marking and signing, speed control and modern freeway management systems and approaches.

Prerequisite(s): TR 6013, TR 6313, or equivalents, or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Table 10: Urban Systems Engineering and Management Concentration

Select at least four courses from:

CE 7813 Infrastructure Planning, Engineering and Economics

3 Credits This course covers methods for identifying, formulating, preliminarily appraising and analyzing in detail individual projects and systems of civil engineering projects. Different approaches relevant to government agencies, public utilities, industrial firms and private entrepreneurs are discussed, as well as planning of projects to satisfy single and multiple purposes and objectives, meet local and regional needs and take advantage of opportunities for development. Also covered are financial and economic analyses, including sensitivity and risk analysis; mathematical models for evaluation of alternatives and optimization; and environmental, social, regional economic growth, legal and institutional and public involvement impacts of projects.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7853 Concepts and Implementation of Infrastructure Management Systems

3 Credits This course reviews state-of-the-art, performance- monitoring and system-condition assessment methodologies as part of infrastructure management systems. Emphasis is on information technologies as applied to remote sensing and database development for urban systems management. Tools, such as GIS and dedicated databases for condition assessment are presented in a laboratory environment. Invited experts participate in such areas as transportation, water distribution and utilities.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6073 Instrumentation, Monitoring and Condition Assessment of Civil Infrastructure

3 Credits This course covers: A systematic approach to planning and executing instrumentation, monitoring and condition assessment programs; strain measurements; civil engineering sensors (static, dynamic, optical); environmental measurements; mechatronic sensors; signal conditioning, information measurements and error analysis; business aspects; advanced-measurement systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7753 Environmental Systems Management
3 Credits This course provides an overview of information technologies as applied to the remote sensing of environmental infrastructure systems, and includes the development of infrastructure system databases to assist complex decision-making on environmental infrastructures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8713 Construction and the Law**

3 Credits Construction industry executives need not be legal experts, but they must be aware of the legal issues affecting their industry and their bottom line. This course uses the case study method to lead students through the concepts of design and construction law. The course focuses on the interface of legal, business and technical issues and their resolution. It includes the design and organization of construction documents; the legal aspects of bidding, subcontracting, bonds, insurance, mechanic’s liens, etc; and the implication of delays, changes and charged conditions. Alternative dispute resolution (ADR) methods are introduced.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8733 Infrastructure Financing: Structuring of a Deal**

3 Credits This course examines what it takes to structure a deal from a credit perspective, legally and financially, for domestic and international projects. In the domestic sector, the course focuses on transportation projects, examining the peculiarities and the uniqueness of the capital market. Examples are studied and recent changes are discussed in areas such as financing transportation projects and the dramatically changing nature of financing these projects. In the international sector, the course covers innovative financing techniques.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6223 Intelligent Transportation Systems and Their Applications**

3 Credits This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

Prerequisite(s): TR 6013 or permission of adviser.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Footnote

* Students must meet the requirements for enrollment in Exec 21 courses.

**Doctorate**
Civil Engineering, Ph.D.

Doctoral Program in Civil Engineering

The Department of Civil Engineering currently offers two doctoral degree programs: PhD in Civil Engineering and PhD Transportation Planning and Engineering. Requirements for the Civil Engineering degree are detailed here. For information on the Transportation Planning and Engineering program, see the “Transportation” section of this catalog.

Goals and Objectives

The PhD in Civil Engineering is research-oriented and intended for those whose goal is a career in civil engineering research and/or teaching at the university level or in private research organizations. Specific doctoral program objectives are to develop the skills and knowledge necessary to:

- Specialize within one of the subdisciplines of civil engineering;
- Perform independent fundamental research in one of the subdisciplines of civil engineering;
- Produce a piece of fundamental research that advances meaningfully the state of the art of one of the subdisciplines of civil engineering and is publishable in a first-tier refereed civil engineering–related journal.

A PhD is granted for the invention or creation of new knowledge in civil engineering. This knowledge may result from analytical, numerical or experimental research. The knowledge may be practical or fundamental in nature.

Areas of Concentration

Students pursuing the PhD in Civil Engineering must choose to specialize in one of the following subdisciplines of civil engineering:

- Structural Materials and Engineering
- Geotechnical and Geo-environmental Engineering
- Environmental and Water Resources Engineering
- Construction Management and Engineering
- Highway and Traffic Engineering
- Urban Infrastructure Systems Engineering and Management

Other focus areas are possible and can be developed with the assistance of faculty advisers. All subject areas must be relevant to the degree sought, and a faculty member must be willing and able to guide the student’s research.

Program Administration

The Department of Civil Engineering has five graduate program coordinators:

- Graduate Program Coordinator for Civil Engineering (MS and PhD)
- Graduate Program Coordinator for Environmental Engineering/Environmental Science (MS)
- Graduate Program Coordinator for Urban Systems Engineering and Management (MS)
- Graduate Program Coordinator for Transportation (MS and PhD)
- Graduate Program Coordinator for Construction Management and Engineering (MS)
The graduate coordinators form the departmental Graduate Committee. The Committee reviews all PhD applications and makes admissions decisions, which are implemented by a graduate coordinator. For each registration, the student’s program must be approved by the academic adviser and signed by the graduate coordinator.

**Admission Criteria**

1. Admission to the PhD in Civil Engineering requires an MS in Civil Engineering or equivalent with a GPA of 3.5 or better (on a 0-4 scale).
2. Applicants to the PhD programs are not required to take the Graduate Record Examination (GRE); however, it is encouraged. If the GRE is taken, the applicant must submit the results for consideration.
3. Foreign applicants must take the TOEFL examination and submit the results for consideration.

In criteria 1 and 2 above, the “equivalent” can be achieved in several ways. The candidate may have a MS degree with a different title that covers substantially the same material. In more general terms, the applicant must demonstrate that he or she has the equivalent of all undergraduate and master’s-level course work to be able to pursue doctoral-level work in the chosen major area, as well as in a minor area within the umbrella of civil engineering. Further, “equivalence” is evaluated based on the totality of the student’s undergraduate and graduate record, not course by course. Thus, an applicant who wishes to pursue doctoral work in Environmental Engineering, for example, must have the entire undergraduate and master’s-level course background expected in Environmental Engineering, but need not demonstrate such a background in structures. Because admission to a PhD program requires a relevant MS (or equivalent), an applicants who has not yet earned a master’s degree will be admitted as MS students and is expected to earn a MS degree while completing the major and minor course requirements. In rare cases, an applicant with only a BS degree may be directly admitted into the PhD program with the written approval of the department head.

**Doctoral Program of Study**

Every PhD student upon admission is assigned an academic adviser, who is designated by the department head. Any member of the civil engineering faculty may be an academic adviser to a PhD student. The first meeting should take place shortly after receiving an acceptance letter from the Admissions Office. During this first meeting the student’s Program of Study should be established. The Program of Study should include a list of the fundamental and advanced topics that will comprise the specific courses, the subject matter for the qualifying exam and possible research areas.

In cases where a student is supported on a research contract, the principal investigator of the contract will normally be the student’s academic adviser. Where a student has a particular research interest and is working with a particular faculty member, the student may request that faculty member for his or her academic adviser. In rare cases, when a PhD student enters the program without a prior selection of a major area of study, the initial academic adviser will be the graduate coordinator of the program area. Each PhD candidate reports to two advisory committees: an Academic Advisory Committee and a Dissertation Committee.

**Academic Advisory Committee**

The student’s academic adviser plans a program to fulfill major and minor requirements for the PhD degree. The Academic Advisory Committee generally consists of the academic adviser and one faculty member for each minor area of study. The Academic Advisory Committee guides the PhD student’s work through the successful completion of a qualifying examination. A letter signed by the academic adviser and approved by the department head is placed in the student’s file indicating the composition of the Academic Advisory Committee.

**Doctoral Degree Requirements**

To earn a doctoral degree in Civil Engineering, the following requirements must be met:
1. 54 credits of graduate course work (not including the PhD dissertation) in relevant major and minor areas of study beyond the bachelor’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale). Up to 6 credits of the 54 credits may be satisfied by individual guided studies, readings, projects and theses.

2. Completion and successful defense of a 21-credit dissertation related to the major area of study. Dissertations must consist of original research that meaningfully advances the state of the art in the research subject area and should result in the publication of at least one paper in a strictly peer-reviewed technical journal related to the subject. A grade of B or better must be achieved for the dissertation. There are two types of dissertation credits:
   - CE 9998: Independent original investigation demonstrating creativity and scholarship worthy of publication in a recognized engineering journal. Registration for a minimum of 6 credits is required before registering for CE 999X.
   - CE 999X: Independent original investigation demonstrating creativity and scholarship worthy of publication in a recognized engineering journal. Candidates must successfully defend dissertations orally. Registration for 3 to 6 credits per semester is permitted after successfully completing the doctoral qualifying examination, but a minimum of 12 credits must be completed before the defense. Registration must be continuous (excluding summer semesters), unless a formal leave of absence is requested and approved. Registration for 3 to 12 credits per semester is permitted. In the final semester of work, registration for credit is permitted with the approval of the department head. Prerequisites: CE 999X (6 credits), degree status, successful completion of doctoral qualifying examinations and approval of the dissertation adviser.

3. Completion of two minor areas of study, as follows:
   - Out of Department Minor: Completion of 9 credits of graduate or undergraduate course work in one or two technical areas of study.
   - In-Department Minor: Completion of 6 credits of graduate course work in a minor area outside the major subdiscipline in civil engineering.

4. Residency requirements for the PhD in Civil Engineering include the 21-credit dissertation plus a minimum of 15 credits of applicable graduate course work taken at NYU-Poly.

5. In satisfying the 54-credit course requirement (requirement 1), the student must satisfy all requirements for the major and minor areas selected, or their equivalents.

6. In satisfying these basic PhD requirements, students also must satisfy one of the two following conditions:
   a. 48 credits of relevant graduate course work, not including individual guided studies (readings, projects, theses, etc.) beyond the bachelor’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale).
   b. 24 credits of approved graduate course work, not including individual guided studies (readings, projects and theses) beyond the master’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale). Satisfying condition 2 requires that the department accept the student’s MS degree in toto without regard to its specific content. This acceptance requires a recommendation from the department’s Graduate Committee and department head approval.

2. Although publication is not required as a condition for graduation at this time, journal publication is strongly encouraged. Every PhD candidate is expected to generate knowledge worthy of publication in two or more reputable journals.

Transfer Credits

A maximum of 39 credits of approved graduate work may be transferred. Transfer credits for PhD students may be awarded on a course-by-course basis or by the transfer of a MS degree from another institution in satisfaction of 30 graduate credits. The latter requires a recommendation from the department’s Graduate Committee and the approval of the department head. Transfer credits are generally awarded at the time of admission and must be approved by the academic adviser, the graduate coordinator and the department head.

Qualifying Examinations
A student must register for RE 9990 PhD Examination in the semester in which the qualifying exam will be taken. This course carries no credit, and the student incurs no fees. It provides a place in the student's official transcript to record when the qualifying exam was taken and the result.

Every student pursuing a PhD must pass a qualifying examination before becoming a candidate for the PhD. The qualifying examination consists of a six-hour written portion (generally given in two three-hour blocks on the same day), and an oral portion which may be given before or after the written portion. Both written and oral portions focus on fundamental and advanced civil engineering topics relevant to the student’s specific program of study.

The oral portion may also explore specific skill areas required to conduct successful independent research. Students are deemed to have passed the examination based upon an overall evaluation of both the written and oral portions of the examination.

The qualifying examination is a pass/fail milestone in the PhD process. A letter indicating the result of each examination is placed in the student’s graduate file. In rare cases, a student may be deemed to have conditionally passed the qualifying exam. This may occur when the student does extremely well in all but one area. Such a student must follow a prescribed plan to strengthen his or her knowledge and skills in the weak area and pass a special examination in the weak area within one calendar year. A student who conditionally passes the qualifying exam may register for dissertation credits and may form a Dissertation Committee.

While each student will take a different qualifying examination based upon an individual program of study, the exam is considered a departmental examination. All department faculty members in each civil engineering sub-discipline may participate in submitting written problems. Each student’s academic advisory committee will review the entire exam before it is administered, and may suggest changes if it deems the examination, as presented, to be an inequitable test of the student’s abilities. Recommendations on examination results are submitted by each student’s Academic Advisory Committee. The departmental faculty, acting as a whole, votes to accept or reject such recommendations at a meeting scheduled for this purpose.

Additionally:

1. According to NYU-Poly policy, students should take the qualifying exam within their first year of study at NYU-Poly.
2. A student may take the qualifying exam twice. A third attempt is permitted only with written permission from the Academic Advisory Committee and the approval of the department head. Under no circumstances may a student take the examination more than three times.
3. No student may register for CE 999X Dissertation credits until passing the qualifying exam.
4. A Dissertation Committee cannot be formed until the student passes the qualifying exam.
5. Any student who cannot pass the qualifying exam will be disqualified from the program.

Dissertation Committee

A Dissertation Committee is formed immediately after a student passes the qualifying exam to guide the student's course of study and research work. This committee will serve as a panel of experts to aid the candidate throughout his or her research.

The Dissertation Committee shall have no less than five members, including a chairperson, a major adviser, and an adviser for each minor the student is pursuing, one of whom must be on the faculty in another NYU-Poly department. One external member who is either a faculty member at another academic institution or a noted PhD-level practitioner is encouraged. Additional faculty members may also serve on the Dissertation Committee.

The members of the Academic Advisory Committee may also serve on the Dissertation Committee. The membership of the Dissertation Committee must be approved by the department head and recorded with the Office of Graduate Academics.

The major adviser, who may also serve as chairperson, must be a full-time faculty member of the Department of Civil Engineering.

Dissertation Proposal
Upon passing the qualifying exam and the appointment of a Dissertation Committee, the PhD candidate must submit a written Dissertation Proposal outlining the subject of the proposed research. This proposal should be 15 to 20 pages long and should address the following specific items:

1. Description of the topic;
2. Literature review sufficient to ensure original work;
3. Method(s) for the research;
4. Data and/or laboratory needs and their availability; and
5. Anticipated outcomes.

Dissertation Committee

The Dissertation Proposal must be submitted within one semester of full-time study after passing the qualifying exam, or before 9 credits of dissertation credit are completed.

The Dissertation Proposal is presented orally and defended before the Dissertation Committee and other interested departmental faculty. The date of the oral defense and copies of the draft Dissertation Proposal must be available to departmental faculty at least two weeks (14 calendar days) before the defense.

When the Dissertation Proposal is formally accepted and defended successfully, the chairperson of the Dissertation Committee shall enter a letter into the student’s graduate file, indicating this acceptance, together with a copy of the Dissertation Proposal. While the Dissertation Committee has reasonable flexibility to modify the Dissertation Proposal during the research, any significant change in focus area or methodology requires submission of an amended Dissertation Proposal and formal acceptance as described herein.

Dissertation Defense

The culmination of the student’s PhD work is the oral presentation and defense of the final draft dissertation. A defense is generally scheduled after the Dissertation Committee reviews the draft dissertation and determines that it is complete and of sufficient quality to be presented and defended.

The defense is organized and scheduled by the Dissertation Committee. All Institute faculty members may observe and ask questions at all NYU-Poly dissertation defenses. Therefore, the date of the defense must be announced Institute-wide at least one month before the event, and copies of the draft dissertation must be available to any faculty member who requests one in a timely fashion and in no case less than two weeks before the defense.

Construction Management

*Program Directors:*  
Fletcher H. (Bud) Griffis and  
Lawrence Chiarelli

Undergraduate Program

The Construction Management, B.S. program is an interdisciplinary program in the Department of Civil Engineering. The program prepares students for a challenging career in the construction industry—as future leaders in a dynamic and ever-changing environment. It concentrates on the skills and understanding necessary to excel as a construction management professional and to compete in the marketplace. Graduates are engaged by owners, developers, construction managers, contractors, architects and engineers, lenders and other construction industry participants.
The Bachelor of Science in Construction Management program covers a broad range of subjects in engineering and construction management, such as planning, cost estimating, scheduling, project management and construction administration. The program also exposes students to the latest applications in construction research and technology. The program teaches students the fundamentals of engineering and construction science, as well as business aspects of construction and the application of traditional and emerging construction methods and technologies. Students also study basic economics, accounting and management principles.

Courses and projects in the program’s junior and senior years illustrate current project management principles and methods by using materials from, and site visits to, construction projects led by experienced mentors.

Beyond the classroom, real-world work experience is available through internships and summer and part-time employment and through professional organizations and associated student chapters, including the Construction Management Association of America (CMAA), the Associated Schools of Construction (ASC), the American Society of Civil Engineers (ASCE), the Society of American Military Engineers (SAME) and the New York Building Congress (NYBC). NYU-Poly’s Career Management Center also supports these efforts.

Goals and Objectives

The objective of the Bachelor of Science in Construction Management is to provide the following for its students:

- A solid foundation of knowledge in mathematics and the basic sciences as applied to construction management.
- The knowledge and skills to excel at an entry-level position as a construction professional and/or continue graduate study in construction management or a related field.
- The necessary written and oral communications skills to enable graduates to pursue leadership opportunities.
- A thorough understanding of state-of-the-art techniques and tools in construction management involving three-dimensional computer modeling, building information modeling (BIM), integration of information technology and the application of innovative planning, design and construction administration methodologies.
- A broad education in preparation for lifelong learning and individual growth. Students are required to take courses in writing and the humanities. Electives allow students to further customize their education to enhance individual interests.

Pedagogy

Construction management courses use a variety of pedagogical models, including theory-led teaching, case-method education and project-based and team-based teaching.

Teaching based on exposition of theory is applied to engineering and construction science. Fundamentals in mathematics, chemistry and physics, statics, mechanics of materials, modeling and construction methods and materials are necessary prerequisites to developing and applying construction management skills.

Case-method teaching uses real-world business experiences to demonstrate the application of general principles and to apply them to specific problems posed during instruction. This pedagogy is used to teach construction contracts and administration, estimating, scheduling, planning, safety and construction law.

Project-based and team-based education are experiential; students learn by doing, much as they would in a natural sciences laboratory class. Project-based education also provides students an opportunity to learn how to assemble and coordinate necessary information, assert authority and delegate responsibility. This skill is particularly important in construction management, in which the essential tasks are managing people and information.

It is common in construction management courses to employ all pedagogical approaches. The construction management faculty brings together theory-based instruction and an intimate understanding of state-of-the-art construction management practices.
The City of New York provides a universe of projects that are readily available to students to serve as a virtual laboratory. Construction documents and other resources are available to students for classroom study and visiting project sites. Faculty members who are actively involved in construction projects discuss the unique and special problems encountered on such projects, as well as potential solutions. Visits to professional offices and project sites are an essential part of an NYU-Poly construction management education.

**Program Content**

The construction management curriculum incorporates the following subject areas:

<td><strong>128</strong></td>
</tr>
</tbody>
</table>

**Part-Time Students**

Students may register as part-time students (fewer than 12 credits a semester). Such students must be advised, however, that the department no longer offers many undergraduate courses in the evening, and part-time students are required to take most courses in the day. Part-time students should maintain close contact with their academic advisers to plan an appropriate course sequence.

**Graduate Programs**

NYU-Poly offers a Master of Science degree program in Construction Management and two graduate certificate programs: one in executive construction management (Exec 21) and the other in construction management.

**The Exec 21 Program: Graduate Certificate Program in Executive Construction Management**

The Exec 21 Certificate Program in Executive Construction Management (Exec 21) is offered by the Department of Civil Engineering. It is directed toward individuals with significant professional experience in the construction industry and it is focused primarily on the construction industry.

Exec 21 is a leadership program for construction professionals who may not wish to commit to the full Master of Science program, but seek formal certification in construction management. This group may include students who hold a bachelor’s
degree and who wish to specialize in construction management or those who may have previously completed an advanced degree and seek additional skills.

Recognized throughout the construction industry as a vital and innovative educational experience (recipient of the CMAA Academic Achievement Award), Exec 21 courses are taught by eminently qualified construction industry professionals and faculty.

Students without significant work experience who may not wish to commit to the full Master of Science program, but seek formal certification in construction management may enroll in the Certificate Program in Construction Management, jointly offered by the Department of Civil Engineering and the Department of Technology Management. That program includes general management courses in addition to construction management courses and does not require any work experience for full participation.

Admission
Students seeking admission to the Exec 21 Certificate Program should have earned a bachelor’s degree in a related discipline and should have a minimum of three to five years of related professional experience. Undergraduate backgrounds in engineering, mathematics, science, management and/or the liberal arts are appropriate with the requisite work experience for admission.

Graduate Certificate in Construction Management

The Department of Civil Engineering, in conjunction with the Department of Technology Management, offers a graduate certificate to students completing 15 credits of course work in construction management. The certificate program provides engineers and other professionals in the construction industry with the knowledge to understand relevant managerial and physical technological developments and to apply such knowledge effectively in their professions.

Admission
Applicants for the Certificate in Construction Management must hold relevant bachelor’s degrees. Compatible backgrounds include engineering, math, science, management, architecture, economics, law and the liberal arts. The undergraduate degree must be from an acceptable institution.

Master of Science in Construction Management

The Master of Science in Construction Management program requires 30 credits of course work. Courses include those in the Exec 21 and Construction Management certificate programs, Master of Science in Civil Engineering program courses in construction management and elective courses from other NYU-Poly graduate programs.

Courses taken as part of the Exec 21 Certificate Program in Executive Construction Management and the Graduate Certificate Program in Construction Management may be applied toward the Master of Science in Construction Management and the Master of Science in Civil Engineering.

Objectives
The Master of Science in Construction Management program is intended to prepare students for leadership positions in the construction industry. Specifically, the program seeks to provide a thorough understanding of:

- Basic management principles as applied to the construction industry;
- Principles of leadership in the construction industry;
- Integration of modern technology in construction;
- Innovative management tools for the analysis and control of construction projects;
- Principles and methods of planning and financing construction projects; and
- Fundamental tools for communication with diverse employee, client-and public groups.

Admission
Students seeking admission to the Master of Science in Construction Management program must hold a bachelor’s degree from
an accredited undergraduate institution. Students should have a minimum undergraduate grade-point average of 3.0, although this requirement can be waived for candidates with sufficient professional experience in construction management. All candidates are expected to have sufficient background in college-level mathematics; this requirement will be evaluated by a Construction Management Program Director. Students whose academic and professional backgrounds are deemed to be deficient may be required to complete additional undergraduate courses as a pre- or co-requisite to admission to any Construction Management program.

Transfer Credits
The residency requirement for the Master of Science degree is 21 credits. This is the minimum number of graduate credits that students must take at NYU-Poly to be awarded a Master of Science degree.

Students may request the transfer of up to 9 credits of acceptable course work, as determined by a Construction Management Program Director, toward the Master of Science in Construction Management. Such course(s) must be relevant to the student’s degree program and be taken at an accredited institution, and the student must have earned a grade of B or better. No transfer credit is awarded for courses in which a grade less than B was earned. Pass/fail courses will not be considered for transfer unless accompanied by a detailed written evaluation by the course instructor.

All transfer credit requests must be accompanied by an official transcript from the transferring institution. Applications for transfer credits are not considered until the candidate has earned a minimum of 12 graduate credits at NYU-Poly.

Validation credits by examination cannot be used toward fulfillment of the requirements of any graduate program.

Registration for Exec 21 Core Courses
Students not enrolled in the Exec 21 Program must obtain the prior approval of a Construction Management Program Director to register for Exec 21 Core Courses.

Campus

Graduate courses may be offered at NYU-Poly’s main campus in Brooklyn, as well as at its Westchester, Long Island or other satellite locations, including 2 Broadway in downtown Manhattan.

Applications from Foreign Institutions

Applicants to any graduate program in Construction Management from universities outside the United States must achieve a minimum score of 700 on the quantitative section of the Graduate Record Examination (GRE) and a minimum score of 550 (PBT), 213 (CBT), or 80 (IBT) on the Test of English as a Foreign Language (TOEFL). A Construction Management Program Director may waive the GRE and/or TOEFL requirement in exceptional circumstances after examining an applicant’s transcripts or an interview with the applicant.

Foreign applicants who meet all admission requirements, but who fail to satisfy the TOEFL requirement, may be required to take one or more remedial courses in English before or as a condition to admission.

Minor

Construction Management Minor

Much of what is designed is intended to be built or constructed in some manner. The goals of the minor are to teach fundamental technical and leadership skills and promote a greater understanding of relationships among construction and the other professions to students from the various engineering disciplines and other majors who may in some way become involved in the planning, construction, maintenance or operation of built systems. For this reason, the minor is open to any courses (subject to the within
described credit and course prerequisites) within the undergraduate Construction Management program, and it will allow students to select courses that best fit their interests and complement their curricula.

A basic understanding of construction is necessary to take full advantage of the courses in the Construction Management curriculum. CE 1502 Leadership and Foundations of Construction Management (formerly CE 1504) is the first major course in the Construction Management curriculum and serves as the introduction to major course for the program. CE 1502 is a prerequisite to all other undergraduate Construction Management courses, except CE 4533 Construction Law. This prerequisite can also be satisfied by an appropriate introduction to major course in another curriculum, such as CE 1002 Introduction to Civil Engineering. The determination as to whether any other course may satisfy this prerequisite is subject to the evaluation and approval of the Construction Management Program Director. In addition, students who have taken CE 1002 (or its predecessor course) or another acceptable prerequisite may take CE 1502 (or have taken its predecessor course) with the approval of the Construction Management Program Director in satisfaction of the minor requirement; however, students may not count more than one introduction to major course toward the required number of credits for graduation. All other prerequisites shall be as stated in the catalog.

The individual courses taken to fulfill the requirements of the minor each may be 1, 2, 3 or 4 credits. Students must earn a passing grade in not less than five courses and not less than 14 credits.

**Bachelors**

**Construction Management, B.S.**

**Curriculum**

The Bachelor of Science in Construction Management program is advised by a Department Advisory Board, comprising leaders from the engineering and construction professions to help assess and update the program curriculum. The general requirements of the curriculum accommodate the continually expanding requirements of the profession, advancements in knowledge and the contributions of related disciplines. Its offerings are intended to exceed minimum requirements by subject area of the American Council for Construction Engineering (ACCE) Standards and Criteria for Accreditation.

Table 1 summarizes the Construction Management curriculum by subject category. A typical four-year schedule for the program is included at the end of this section of the catalog.

**Table 1: Curriculum for the BS in Construction Management**

**Required Courses in Mathematics: 12 Credits**

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.
MA 2054 Applied Business Data Analysis I

4 Credits This course covers applications of theories of random phenomena to problems in business management. Topics include probability theory, discrete and continuous probability distributions, sampling, measures of central value and dispersion, sampling distributions, statistical estimation and introduction to hypothesis testing. Use of statistical software is integrated with the previous topics; examples are drawn from problems in business decision-making. Applications to advanced statistical applications in business management. Emphasis is on application of concepts. Use of statistical software integrated with the previous topics.

Prerequisite(s): MA 1054 or equivalent.

Note: Course required only for Management Majors. Credit for this course may not be used to satisfy the requirements for other majors.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Courses in the Physical Sciences: 7 Credits

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.
Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**PH 1013 Mechanics**

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

Required Courses in Humanities and Social Sciences: 24 Credits

**EW 1013 Writing the Essay**

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.
- Humanities/Social Sciences Elective 3 Credits So1
- Humanities/Social Sciences Elective 3 Credits So2
- Humanities/Social Sciences Elective 3 Credits J1
- Humanities/Social Sciences Elective 3 Credits J2
- Humanities/Social Sciences Elective 3 Credits S1
- Humanities/Social Sciences Elective 3 Credits S2

Required Courses in Business and Management: 18 Credits

See Footnotes

**MG 2204 Financial Accounting**
4 Credits This course provides a solid foundation in constructing and interpreting financial statements. Topics include: accounting terminology, financial-statement preparation and analysis, liquidity and credit-risk ratios, depreciation calculations, revenue recognition, accrued liabilities and asset valuation. Also covered are the effects of equity transactions, cash flows and various accounting methods on financial statements.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

FIN 2103 Creating and Understanding Financial Statements

3 Credits This course provides a solid understanding of the creation and interpretation of modern financial statements. Topics include the compelling reasons for financial statements, Sarbanes-Oxley, U.S. accounting principles and how they differ abroad, quality of financial information, financial ratios and their uses, cash-flow analysis, measurement of corporate performance, credit analysis and introduction to managing financial risk.

Prerequisite(s): EW 1023.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FIN 2003 Economic Foundations of Finance

3 Credits This course focuses on the fundamental economic concepts underpinning modern financial theory. Material includes consumer behavior; utility theory; analysis of production and costs; competitive markets; monopolistic and monopsonistic markets; time value of money; game theoretic analysis of oligopoly; asymmetric information in markets; externalities; market efficiency and more. The calculus is used to develop these concepts.

Prerequisite(s): EW 1023 and 8 credits of calculus.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

- Level II Elective in Economics 3 Credits So2
- MG/EC/FIN Level II Elective 3 Credits J1
- MG/EC/FIN Level II Elective 3 Credits J2
- MG/EC/FIN Level III Elective 3 Credits S1
- MG/EC/FIN Level III Elective 3 Credits S2

Required Courses in Civil Engineering: 9 Credits

CE 2113 Statics

3 Credits This course covers: Vector treatment of static and dynamic equilibrium of particles and rigid bodies; equivalent forces and couple systems; distributed forces; static analysis of determinate trusses, frames and machines; friction; centroid and center of gravity, and moment of inertia.

Corequisite(s): PH 1013 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1
CE 2123 Mechanics of Materials

3 Credits This course introduces basic principles of stress and strain in axial loading, shear, torsion and bending, along with principles of transformation of stress for design. Laboratory experiments provide hands-on experience.

Prerequisite(s): PH 1013 and CE 2113 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CE Elective 3 Credits S1

Required Courses in Construction Management: 42 Credits

CE 1502 Leadership and Foundations of Construction Management

2 Credits This course introduces the student to the profession of construction management. It focuses on the role of the construction manager and the fundamental concepts and terminology employed in planning, developing and constructing projects. Leadership, professional development, ethics and safety are emphasized.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 2504 Construction Modeling and Data Structures I

4 Credits This course introduces architectural drafting and computer graphics. It capitalizes on state-of-the-art computer applications in managing construction. The course familiarizes the student with two-dimensional construction drawings that represent the current industry standard, and it propels the student towards the future by teaching the basics of three-dimensional (3-D) computer modeling. This course also introduces the use of the 3-D model with associated databases to manage construction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 2513 Construction Materials and Methods

3 Credits This course covers the fundamental materials and methods used in constructing building and civil infrastructure projects. It also includes a laboratory that exposes students to commonly employed testing methods of construction materials.

Weekly Lecture Hours: 2.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CE 2523 Contracts and Construction Documents

3 Credits This course covers the documents used in design and construction, including design and construction agreements, drawings and specifications, general and special conditions and others used for procurement and construction administration. The course also examines the relationships among the owner, designers, contractors and suppliers. Students have the opportunity to discuss quality, safety and business and professional ethics.
Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 3503 Cost Estimating**

*3 Credits* Students learn the classification of work, quantity surveying techniques and basic estimating principles applied to construction projects. Also addressed are contracts; specifications and other construction documents; and the identification and allocation of direct and indirect project costs, overhead and profit. Students are introduced to computer-based estimating techniques and software.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 3513 Construction Scheduling**

*3 Credits* Students learn to apply the Critical Path Method (CPM) to construction projects, using precedence diagram networks. The course covers sequencing, cost allocation, updating, cash flow, resource constraints and scheduling, manpower leveling and distribution, time-scale networks, lead and lag-time constraints, time-cost tradeoffs, overlap and other specific leading edge scheduling techniques. Students direct an entire project from planning through scheduling and control, both manually and through software.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CE 3532 Construction Site Layout**

*2 Credits* This course studies the practical applications of surveying and its relationship to site planning and design. The first portion of the course concentrates on land surveying concepts, including mathematics, horizontal and vertical control and angle measurement. The second portion of the course applies surveying data to site layout using traverses, area computations, property surveys, topography, and construction surveys for highway and building applications.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 3541 Surveying**

*1 Credits* This field laboratory introduces students to basic surveying practice, including the use of surveying equipment (wheels, tapes, levels and theodolites), measurement theory and computation, data accuracy and precision, and the field book to properly record data.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CE 3553 Non-Structural Building Systems**

*3 Credits* This course introduces the students to mechanical, electrical and vertical transportation systems for buildings. It examines fundamental aspects of the design, procurement and construction of heating, ventilating and air conditioning (HVAC),
supply and sanitary plumbing, fire detection and suppression, high- and low-voltage electrical, security, elevator and escalator and building management systems.

*Prerequisite(s):* CE 1502 or CE 1002.
*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**CE 3563 Construction Modeling and Data Structures II**

*3 Credits* This course is the continuation of the student’s exploration of construction management through building information modeling (BIM). The students will apply their understanding of construction assemblies, trade scheduling and estimating through studies of a larger project. Emphasis will be placed on the student's ability to model complex assemblies while coordinating and scheduling multiple trades. This progressive approach incorporates the 3D model and the associated databases in the management of construction by developing unit pricing, detailed scheduling and procurement attributes associated with a design.

*Prerequisite(s):* CE 2504.
*Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0*

**CE 4503 Construction Engineering**

*3 Credits* This course covers engineering fundamentals and developing trends in the use of excavating and earth-moving equipment, trucks, pumps, drilling and blasting equipment and cranes. Also considered are shoring and bracing and other temporary site construction operations.

*Prerequisite(s):* CE 1502 or CE 1002, and junior standing.
*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**CE 4513 Construction Project Administration**

*3 Credits* This course examines the roles of the project participants in executing a construction project, focusing on delegating administrative duties and responsibilities and managing and coordinating the physical work and administrative control of project information and records. Students use computer-based project administration techniques and software.

*Prerequisite(s):* CE 1502 or CE 1002, and junior standing.
*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**CE 4523 Structural Building Systems**

*3 Credits* This course introduces the general principles of loads on buildings and the design and analysis of conventional structural building systems in steel, concrete, wood and masonry. It also addresses the construction of such systems.

*Prerequisite(s):* CN major, CE 2123 and junior standing.
*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**CE 4533 Construction Law**

*3 Credits* The course introduces students to areas of the law that they are likely to encounter in construction. Following an introduction to the legal system and form of legal analysis, areas addressed include contracts, procurement, scope definition,
delays and acceleration, site conditions, warranties, termination, tort claims, dispute resolution and ethics.

Prerequisite(s): Junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 4543 Construction Management Project**

3 Credits This course is the senior capstone experience in construction management which requires students to demonstrate the skills acquired through the undergraduate construction management curriculum. Students work individually or in groups as determined by the instructor and other participating industry advisers. Students attend regularly scheduled lectures and workshops, participate in interim and final presentations, and are responsible for periodic written submissions.

Prerequisite(s): Senior status or as otherwise determined by the Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Other Required Courses: 16 Credits

**EG 1001 Engineering and Technology Forum**

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**CS 1133 Engineering Problem Solving and Programming**

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.
Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3
- Liberal Arts and Sciences Elective 3 Credits 11 8
- Liberal Arts and Sciences Elective 3 Credits 12 8
- Free Elective 3 Credits 12

Total Credits for Degree: 128 Credits

Footnotes for Table 1

1 Sem=semester usually taken; F= Freshman, So=Sophomore, J=Junior, S=Senior, 1=Fall, 2=Spring;

2 Students may substitute MA 1324, which includes two additional contact hours, for MA 1024.

3 The department recommends that students take MA 1124 Calculus II (or MA 1424 Integrated Calculus II) as the MA Elective.

4 All students take a writing placement examination. Students for whom English is a second language may be placed in an ESL section, which includes additional hours of language education. Students also may be placed in a remedial section, based upon the exam results, which may or may not carry degree credit.

5 Student must complete 24 credits in Humanities and Social Sciences, including the freshman writing courses, in accordance with the Technology, Culture and Society Departmental requirements. At least one elective shall be in Philosophy (PL) and contain at least 1 credit of ethics. At least one elective must be a 3xxx/4xxx level course. At least one elective must be a writing-intensive course, labeled by “W.”

6 Students are required to complete 18 credits from Business and Management courses, with at least 6 credits from level III or higher courses. (One business and management credit is attributed to CE 4533 Construction Law). A level II course has a 2xxx number, while a level III course has a 3xxx number. Level III electives generally have a prerequisite of a related level II elective. Since courses may be three or four credits, the number of courses necessary to complete this requirement may vary.

7 CE elective is any course with a CE prefix for which the student has the approved prerequisites.

8 Students must complete 60 credits in liberal arts and sciences.

Typical Course of Study for the Bachelor of Science in Construction Management

Freshman Year

Fall Semester: 15 Credits
CM 1004 General Chemistry for Engineers

*4 Credits* This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

*Corequisite(s):* EG 1 Examination Hour

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1*

EW 1013 Writing the Essay

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s):* Placement exam or MA 912 or MA 914. *Corequisite(s):* EG 1 Examination Hour

*Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

EG 1001 Engineering and Technology Forum

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

*Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

EG 1003 Introduction to Engineering and Design

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

*Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2*
Spring Semester: 15 Credits

**PH 1013 Mechanics**

3 Credits  This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**CS 1133 Engineering Problem Solving and Programming**

3 Credits  This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

**CE 1502 Leadership and Foundations of Construction Management**

2 Credits  This course introduces the student to the profession of construction management. It focuses on the role of the construction manager and the fundamental concepts and terminology employed in planning, developing and constructing projects. Leadership, professional development, ethics and safety are emphasized.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1023 The Advanced College Essay**

3 Credits  This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

**MA 1124 Calculus II**
4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Sophomore Year

Fall Semester: 16/17 Credits

CE 2113 Statics

3 Credits This course covers: Vector treatment of static and dynamic equilibrium of particles and rigid bodies; equivalent forces and couple systems; distributed forces; static analysis of determinate trusses, frames and machines; friction; centroid and center of gravity, and moment of inertia.

Corequisite(s): PH 1013 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CE 2504 Construction Modeling and Data Structures I

4 Credits This course introduces architectural drafting and computer graphics. It capitalizes on state-of-the-art computer applications in managing construction. The course familiarizes the student with two-dimensional construction drawings that represent the current industry standard, and it propels the student towards the future by teaching the basics of three-dimensional (3-D) computer modeling. This course also introduces the use of the 3-D model with associated databases to manage construction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 2513 Construction Materials and Methods

3 Credits This course covers the fundamental materials and methods used in constructing building and civil infrastructure projects. It also includes a laboratory that exposes students to commonly employed testing methods of construction materials.

Weekly Lecture Hours: 2.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

MG 2204 Financial Accounting
This course provides a solid foundation in constructing and interpreting financial statements. Topics include: accounting terminology, financial-statement preparation and analysis, liquidity and credit-risk ratios, depreciation calculations, revenue recognition, accrued liabilities and asset valuation. Also covered are the effects of equity transactions, cash flows and various accounting methods on financial statements.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FIN 2003 Economic Foundations of Finance

This course focuses on the fundamental economic concepts underpinning modern financial theory. Material includes consumer behavior; utility theory; analysis of production and costs; competitive markets; monopolistic and monopsonistic markets; time value of money; game theoretic analysis of oligopoly; asymmetric information in markets; externalities; market efficiency and more. The calculus is used to develop these concepts.
Prerequisite(s): EW 1023 and 8 credits of calculus.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
or
- EC Level II Elective in Economics 4 Credits

MA 2054 Applied Business Data Analysis I

4 Credits This course covers applications of theories of random phenomena to problems in business management. Topics include probability theory, discrete and continuous probability distributions, sampling, measures of central value and dispersion, sampling distributions, statistical estimation and introduction to hypothesis testing. Use of statistical software is integrated with the previous topics; examples are drawn from problems in business decision-making. Applications to advanced statistical applications in business management. Emphasis is on application of concepts. Use of statistical software integrated with the previous topics.

Prerequisite(s): MA 1054 or equivalent.
Note: Course required only for Management Majors. Credit for this course may not be used to satisfy the requirements for other majors.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CE 3503 Cost Estimating

3 Credits Students learn the classification of work, quantity surveying techniques and basic estimating principles applied to construction projects. Also addressed are contracts; specifications and other construction documents; and the identification and allocation of direct and indirect project costs, overhead and profit. Students are introduced to computer-based estimating techniques and software.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3513 Construction Scheduling

3 Credits Students learn to apply the Critical Path Method (CPM) to construction projects, using precedence diagram networks. The course covers sequencing, cost allocation, updating, cash flow, resource constraints and scheduling, manpower leveling and distribution, time-scale networks, lead and lag-time constraints, time-cost tradeoffs, overlap and other specific leading edge scheduling techniques. Students direct an entire project from planning through scheduling and control, both manually and through software.
Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3532 Construction Site Layout

2 Credits This course studies the practical applications of surveying and its relationship to site planning and design. The first portion of the course concentrates on land surveying concepts, including mathematics, horizontal and vertical control and angle measurement. The second portion of the course applies surveying data to site layout using traverses, area computations, property surveys, topography, and construction surveys for highway and building applications.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 3541 Surveying

1 Credits This field laboratory introduces students to basic surveying practice, including the use of surveying equipment (wheels, tapes, levels and theodolites), measurement theory and computation, data accuracy and precision, and the field book to properly record data.

Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

- MG/EC/FIN MG/EC/FIN Level II Elective 3 Credits
- Liberal Arts and Sciences Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 18 Credits

CE 2504 Construction Modeling and Data Structures I

4 Credits This course introduces architectural drafting and computer graphics. It capitalizes on state-of-the-art computer applications in managing construction. The course familiarizes the student with two-dimensional construction drawings that represent the current industry standard, and it propels the student towards the future by teaching the basics of three-dimensional (3-D) computer modeling. This course also introduces the use of the 3-D model with associated databases to manage construction.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CE 3553 Non-Structural Building Systems

3 Credits This course introduces the students to mechanical, electrical and vertical transportation systems for buildings. It examines fundamental aspects of the design, procurement and construction of heating, ventilating and air conditioning (HVAC), supply and sanitary plumbing, fire detection and suppression, high- and low-voltage electrical, security, elevator and escalator and building management systems.
Prerequisite(s): CE 1502 or CE 1002.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Liberal Arts and Sciences Elective 3 Credits
- Free Elective 3 Credits
- MG/EC/FIN MG/EC/FIN Level II Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

**CE 4513 Construction Project Administration**

3 Credits This course examines the roles of the project participants in executing a construction project, focusing on delegating administrative duties and responsibilities and managing and coordinating the physical work and administrative control of project information and records. Students use computer-based project administration techniques and software.

Prerequisite(s): CE 1502 or CE 1002, and junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 4523 Structural Building Systems**

3 Credits This course introduces the general principles of loads on buildings and the design and analysis of conventional structural building systems in steel, concrete, wood and masonry. It also addresses the construction of such systems.

Prerequisite(s): CN major, CE 2123 and junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CE Civil Engineering Elective 3 Credits
- MG/EC/FIN MG/EC/FIN Level III Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

**CE 4503 Construction Engineering**

3 Credits This course covers engineering fundamentals and developing trends in the use of excavating and earth-moving equipment, trucks, pumps, drilling and blasting equipment and cranes. Also considered are shoring and bracing and other temporary site construction operations.

Prerequisite(s): CE 1502 or CE 1002, and junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 4533 Construction Law

3 Credits The course introduces students to areas of the law that they are likely to encounter in construction. Following an introduction to the legal system and form of legal analysis, areas addressed include contracts, procurement, scope definition, delays and acceleration, site conditions, warranties, termination, tort claims, dispute resolution and ethics.

Prerequisite(s): Junior standing.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 4543 Construction Management Project

3 Credits This course is the senior capstone experience in construction management which requires students to demonstrate the skills acquired through the undergraduate construction management curriculum. Students work individually or in groups as determined by the instructor and other participating industry advisers. Students attend regularly scheduled lectures and workshops, participate in interim and final presentations, and are responsible for periodic written submissions.

Prerequisite(s): Senior status or as otherwise determined by the Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- MG/EC/FIN MG/EC/FIN Level III Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for the degree: 128

Footnotes

1 The table lists courses in the semester usually taken.

2 All students, except those who have earned a grade of 4 or 5 on the Calculus AB or BC AP Exam, take a mathematics placement examination. Students may be placed in an alternative course, which may not carry degree credit, based upon the results of such placement examination. Students also may be advance-placed based upon AP or college math credit earned in high school. Students may substitute MA 1324, which includes two additional contact hours, for MA 1024.

3 The department recommends that students take MA 1124 Calculus II (or MA 1424 Integrated Calculus II) as the MA Elective.

4 Students with an ESL background may be placed in an appropriate remedial course, which includes additional hours of language education. Students may also be placed in a remedial section, based upon placement exam results, which may not carry degree credit.

5 Student must complete 24 credits in Humanities and Social Sciences, including the first-year writing courses, in accordance with the Technology, Culture and Society Department requirements. At least one Humanities and Social Sciences elective shall be in Philosophy (PL) and contain at least 1 credit of ethics. At least one Humanities and Social Sciences elective must be a 3xxx/4xxx level course. At least one Humanities and Social Sciences elective must be a writing-intensive course, labeled by “W.”

6 Students must complete 18 credits from Business and Management courses, with at least 6 credits from level III or higher courses. One additional credit in Business and Management is contributed by CE 4533. A level II course has a 2xxx number,
while a level III course has a 3xxx number. Level III electives generally have a prerequisite of a related level II elective. Since courses may be 3 or 4 credits, the number of courses necessary to complete this requirement may vary.

7 CE Elective is any course with a CE prefix for which the student has the approved prerequisites.

8 Students must complete 60 credits in liberal arts and sciences.

**Graduate Certificate**

**Construction Management Graduate Certificate**

**Curriculum**

Students must complete at least five courses (15 credits) in accordance with the following requirements:

i. Select at least three courses (9 credits) from those courses that satisfy the Major Requirement for the Master of Science in Construction Management Program and are approved by a Construction Management Program Director; and

ii. Select at least one (3 credits) graduate-level Management (MG) course approved by a Construction Management Program Director.

**Grade Requirements**

Students must achieve a B (3.0) cumulative average in all graduate courses taken at NYU-Poly.

**Executive Construction Management (Exec 21) Graduate Certificate**

**Curriculum**

Students must complete 15 credits of course work to earn a certificate. A minimum of 9 credits must be selected from the Exec 21 Core Courses, and up to 6 credits may be selected from those courses that satisfy the Major Requirement for the Master of Science in Construction Management Program and are approved by a Construction Management Program Director.

**Exec 21 Core Courses:**

**CE 8703 Managing and Leading in the 21st Century**

*3 Credits* Today's mega projects require the formation of large multidisciplinary teams including engineers, constructors and financial, legal and business experts. Success in this challenging environment requires up-to-date and proven leadership and management skills. This course covers the basic components of management planning, organizing, directing, controlling and decision-making. It defines the engineering and construction team and discusses leadership styles. This course also addresses the management of change, external factors that shape decisions, the development of personal leadership abilities and, ultimately,
21st century leadership requirements.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8713 Construction and the Law**

*3 Credits* Construction industry executives need not be legal experts, but they must be aware of the legal issues affecting their industry and their bottom line. This course uses the case study method to lead students through the concepts of design and construction law. The course focuses on the interface of legal, business and technical issues and their resolution. It includes the design and organization of construction documents; the legal aspects of bidding, subcontracting, bonds, insurance, mechanic’s liens, etc; and the implication of delays, changes and charged conditions. Alternative dispute resolution (ADR) methods are introduced.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8723 How to Succeed in Construction**

*3 Credits* This course leads students through the how-to’s of running a successful, large, complex construction company. It analyzes how the industry actually works, including contractual relationships with clients in all types of projects from design/build to privatization. It covers the business fundamentals of running a construction company, including issues such as surety and insurance: various types of construction organizations, domestic and international; and company culture – inner-workings of a business that can mean the differences between success and failure.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8733 Infrastructure Financing: Structuring of a Deal**

*3 Credits* This course examines what it takes to structure a deal from a credit perspective, legally and financially, for domestic and international projects. In the domestic sector, the course focuses on transportation projects, examining the peculiarities and the uniqueness of the capital market. Examples are studied and recent changes are discussed in areas such as financing transportation projects and the dramatically changing nature of financing these projects. In the international sector, the course covers innovative financing techniques.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 875X Employer Focused Residency**

*Up to 3 credits* In this course, students define a proposal for a project, the subject of which may be related to their employment. Students work one-on-one with an adviser throughout the semester. There is no formal classroom work; however, students must update their adviser weekly. The project runs no longer than one semester. Students formally present their projects’ findings to invited guests at the end of the semester.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*
CE 8763 Capital Program Management/Program Development

3 Credits The course examines the process of capital program management and development. Depending upon the instructor and project used for illustration, the course analyses how either the public or private sector views a project and develops it and the internal workings of an organization in determining how a project is selected, funded and managed. The course examines various contracting strategies, as well as the concepts of risk allocation, funding and project finance.

Prerequisite(s): Admission to Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8773 Dispute Avoidance and Resolution

3 Credits This course analyzes the basic causes for construction disputes and introduces methods for dispute avoidance by proper risk allocation, management and control, as well as other techniques, including partnering. It uses the case study method to address litigation and provides an understanding of the process of arbitration and other alternative dispute resolution (ADR) methods such as negotiation, mediation, mini trials and dispute review boards.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8783 Construction Management and Planning

3 Credits Strategic planning is indispensable to achieving superior management. This course in business planning provides practical advice for organizing the planning system, acquiring and using information and translating strategic plans into decisive action. This knowledge is an invaluable resource for top and middle-level executives.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8803 Infrastructure Planning for Public Works

3 Credits This course deals with the process whereby infrastructure projects are conceived, studied and implemented. The focus will be on the management and leadership roles of the key players in public works agencies. Lectures, reading assignments and classroom discussions will deal with both routine procedures and controversial issues. Students will research and report on important public works projects and on special topics in infrastructure planning.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Grade Requirements

Students must maintain a B (3.0) cumulative average in all graduate courses taken at NYU-Poly.

Masters
Construction Management, M.S.

Curriculum

A minimum of 15 credits (5 courses) must be selected from the following courses:

**CE 7983 Selected Topics in Construction I**

*3 Credits* This course covers topics of special interest in current areas of construction management. Topics are announced before each semester’s offering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7993 Selected Topics in Construction II**

*3 Credits* This course covers topics of special interest in current areas of construction management. Topics are announced before each semester’s offering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8243 Construction Modeling Techniques**

*3 Credits* This course deals with various construction- modeling techniques, including the development of two-dimensional (2D) and three-dimensional (3D) design documents. Students are introduced to the development of building information models (BIM) and their associated databases, using state-of-the-art design and management systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8253 Project Management for Construction**

*3 Credits* This course covers topics specific to developing and coordinating large projects, including organizational structures, management functions, pricing and estimating project costs, bidding and contracting, risk allocation, scheduling, time and cost control, labor relations, quality management and project life-cycle activities.

_Also listed under: MG 8253._
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8263 Construction Cost Estimating**

*3 Credits* This course covers estimating and cost control from the viewpoint of contractors and construction engineers; details of estimating with emphasis on labor, materials, equipment and overhead.

_Also listed under: MG 8263._
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 8273 Contracts and Specifications

3 Credits This course covers principles of contract law as applied to the construction industry and legal problems in preparing and administering construction contracts.

Also listed under: MG 8273.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8283 Risk Analysis

3 Credits This course investigates the ever-rising importance of risk analysis in project management. Topics: Analysis of qualitative and quantitative risk; techniques in probability analysis, sensitivity analysis, simulation of risk and utility theory; and computational methods for calculating risk. Students are exposed to the complexity of real-world corporate and public problems through case investigations.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8293 Construction Operations Analysis

3 Credits This course examines the evaluation and model development of productivity, safety, quality and materials handling in construction operations. Topics include the principal methods for analysis and pre-planning work activities, including the use of three-dimensional (3D) building information models (BIM), four-dimensional (4D) and fully integrated and automated project processes (FIAPP), logistics animation, Monte Carlo scheduling, stochastic simulation and queuing theory. Students are introduced to the use of financial models for task, activity, project and program analyses.

Prerequisite(s): CE 8243 or Construction Management Program Director’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8303 Information Systems in Project Management

3 Credits The course examines the use of contemporary tools for managing the vast array of information over the life of a project. Information handling is reviewed from the perspectives of knowledge acquisition and presentation. The course focuses on applying three-dimensional (3D) building information models (BIM) and four-dimensional (4D) and fully integrated and automated-project processes (FIAPP) that integrate 3D computer models, simulation, cost estimating, scheduling, procurement and information technology (with emphasis on the implementation of 3D computer models and relational databases as information systems for project information handling and project automation).

Prerequisite(s): CE 8243 or Construction Management Program Director’s approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8313 Engineering for Construction I: Methods and Technologies

3 Credits This course covers planning, design and equipment for new construction and for infrastructure rehabilitation; engineering fundamentals of earth moving; soil stabilization and compaction; methods for tunneling through rock and earth and rock blasting; foundation grouting; piles and pile driving equipment; dewatering systems and pumping equipment; factors affecting the selection of construction equipment; review of conventional construction equipment; and trends in robotics.
CE 8323 Engineering for Construction II: Design

3 Credits This course covers planning, design and equipment for new construction and for infrastructure rehabilitation; engineering fundamentals of earth moving; soil stabilization and compaction; methods for tunneling through rock and earth and rock blasting; foundation grouting; piles and pile driving equipment; dewatering systems and pumping equipment; factors affecting the selection of construction equipment; review of conventional construction equipment; and trends in robotics.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8333 Marketing for Construction Management and Engineering Services

3 Credits This course focuses on the process of procurement of construction management and engineering services. It incorporates a hands-on approach to current industry practices. The materials address the following: identifying leads; researching and evaluating competition through various sources; reviewing and critiquing requests for qualifications (RFQ) and requests for proposals (RFP) and responses; developing a marketing resume; developing project profiles; evaluating presentations; and selecting successful candidates. Students will prepare their own proposals and presentations.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8343 Construction Site Safety

3 Credits This course is for individuals who are interested in construction safety and the realities of a construction project and for those seeking certification as a Site Safety Manager from the New York City (NYC) Department of Buildings (DOB). Students learn about the comprehensive Subchapter 19 of the New York City Building Code and the City's Rules and Regulations on construction site safety projects. The course curriculum includes the content approved by the NYC DOB to prepare students for the Site Safety Manager examination.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8353 Construction Scheduling

3 Credits Students will be instructed in advanced Critical Path Method (CPM) construction scheduling techniques including the use of Primavera Project Planner v. 7.0. The course will cover Precedence Diagramming Method (PDM), project resources and resource leveling, schedule updating, schedule impacts of date constraints, project time and cost trade-offs, activity duration estimating, work breakdown structures, differing scheduling requirements on different types of construction projects and an overview of construction contract scheduling specifications. An introduction to other scheduling methodologies and the use of schedules in construction claims will also be addressed.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8363 Building Information Modeling Project Controls

3 Credits The purpose of this course is to enable students to use Building Information Modeling (BIM) as part of the planning and measurement of performance on construction projects. Students will learn various earned value management techniques to
measure the actual performance of work and the associated cost and schedule impacts as compared to baseline values. Emphasis will also be placed on the importance of managing and tracking changes, and mitigating their impacts on construction projects.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8373 Construction Accounting and Finance**

*3 Credits* This course introduces students to the uses of accounting and financial analysis in decision making in a construction and development environment. The course will demonstrate to students how the principles of accounting and financial management can be adapted for, and used in the management of construction companies and project management. Students will review accounting concepts, rules, regulations and reporting requirements as they apply to construction and development, and they will use and create accounting and financial models.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8203 Project Management**

*3 Credits* This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

*Also listed under:* CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6013 Organizational Behavior**

*3 Credits* Introduction to theory, research and practice to better understand human behavior in organizations. Topics include motivation and job satisfaction; decision making; group dynamics; work teams; leadership; communication; power, politics and conflict; organization culture, structure and design; impact of technology; management of work stress; organizational change and development; and career management. Analysis of organizational behavior problems by self assessments, case studies and simulations.

*Note: Distance learning available.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Note:**

The above list is subject to change as courses are added to, or deleted from the Program.

The Exec 21 Core Courses may be applied to the above Major Requirement by a student who is enrolled in or has completed the Exec 21 Program, or by any other student with the consent of a Construction Management Program Director.

All students must complete a minor concentration of study, which shall consist of a minimum of 6 credits (two courses) selected from courses in any single graduate academic program at NYU-Poly, or any other concentrated area of study approved by a Construction Management Program Director. The selection of the minor concentration of study shall be made with the advisement and consent of a Construction Management Program Director.
A student may complete an up to three (3)-credit independent project to satisfy the Major Requirement: CE 993X Project for the Master of Science in Construction Management.

The remaining courses needed to fulfill the 30-credit requirement shall be selected from the Civil Engineering or Construction Management Programs (bearing a CE xxxx or TR xxxx designation), unless otherwise authorized by a Construction Management Program Director. However, if the minor area of study is from the Civil Engineering Department, up to two of the remaining courses may be selected from any other electives at NYU-Poly.

Note that some electives include prerequisites that not all program enrollees may have completed. Students cannot register for a course for which they have not satisfied the stated prerequisites unless they have the written permission of both the course instructor and a Construction Management Program Director.

Grade Requirements

To earn a Master of Science in Construction Management, students must maintain a B (3.0) cumulative average in all graduate courses taken at NYU-Poly.

Environmental Engineering and Science

*Academic Adviser: Mohammad Karamouz*

The Department of Civil Engineering offers graduate programs in environmental engineering and environmental science leading to the following degrees:

- Environmental Engineering, M.S.
- Environmental Science, M.S.

The department also offers the following graduate programs with a concentration in environmental and water resource engineering:

- Civil Engineering, M.S.
- Civil Engineering, Ph.D.

Programs in environmental engineering and environmental science are described below. Programs in civil engineering with a concentration in environmental and water resource engineering are described in the Civil Engineering Program section of this catalog.

Master of Science programs are practice oriented with a strong foundation in underlying principles and methods. The PhD is intended for students with a strong research interest and a desire to advance the state of the art with their research.

Environmental science and environmental engineering are multidimensional professions dealing with preserving, protecting and remedying air, water and soil environments. The program prepares graduates to be employed immediately to meet the challenges of this century or to proceed directly to advanced graduate studies.

General Requirements for Environmental Programs

Admission Requirements

Applicants for the Master of Science in Environmental Engineering should hold an undergraduate or graduate degree in environmental or civil engineering or equivalent from an accredited institution. Students may be accepted with other related backgrounds, but should, as a minimum, have one year of chemistry and physics and basic courses in calculus and differential equations. Such students may be asked to take up to 15 credits of undergraduate courses to complete their preparation. Applicants
for the Master of Science in Environmental Science typically have undergraduate or graduate degrees in the physical, chemical or biological sciences. The adviser may require or recommend undergraduate courses to make up for academic preparation deficiencies.

Admission to the PhD program requires a suitable MS degree from an acceptable institution. A minimum GPA of 3.5 in master’s level work is generally required for admission. For more information about the PhD in Civil Engineering, consult the Civil Engineering Program section of this catalog.

**Grade Requirements**

To earn graduate degrees, Polytechnic requires that students have a 3.0 GPA or better in all graduate courses and in all guided studies (readings, projects, theses, dissertations). Averages are computed separately for courses and guided studies. Transfer credits from other institutions are not included in this average.

**Analytic Background**

All applicants for MS in environmental programs must show evidence of quantitative analytic ability, generally including a minimum of two years of college mathematics and a college-level course in statistics.

PhD applicants are expected to have a superior quantitative analytic background. In addition, they are advised to take at least one course in graduate level statistics, regression analysis or design of experiments as part of their studies.

**Advising**

Each graduate student is assigned a faculty academic adviser. Students must maintain frequent contact with their advisers throughout their studies. Students must meet with their academic advisers before each registration and at any other time they need advice or consultation.

Students must have a detailed program of study formally approved by their advisers before registration. Advisers also handle requests for waiver of certain degree requirements. Such waivers must be approved in writing and placed in the student’s departmental file.

Where specific courses are waived, instructor permission is also required. When waivers are granted, students may be required to take other specific courses in their place or to select additional electives.

Students who register for any guided studies (readings, projects, theses, dissertation) are supervised by a project adviser for each activity. A project adviser may or may not be the same as a student’s academic adviser, depending upon the selected subject matter. To register for any guided study activity, students must submit written proposals to a project adviser before registration. To register, students must obtain written approval from their project and academic advisers. Doctoral students may not register for dissertation credits until they have passed the PhD qualifying examination.

In addition to academic and project advisers, students studying under research or teaching fellowships are assigned fellowship advisers. Normally, these would be either the principal investigator of the research effort funding the fellowship or the director of the academic area in which the teaching fellowship is awarded.

While academic advisers consult and advise students, the student is responsible for ensuring that all degree requirements are fulfilled and all necessary forms and applications are submitted.

**Transfer Credits**
Students must take a minimum of 24 credits at Polytechnic in order to be awarded an MS degree. Students may transfer up to 6 credits of acceptable courses toward a MS degree, subject to the academic adviser’s approval. To be transferred, the course(s) must be relevant to the program and from an acceptable institution. A grade of B or better is required for any transfer credit.

Courses graded on a pass/fail basis are not considered for transfer unless accompanied by a detailed written evaluation by the course instructor. All transfer requests must be accompanied by an official transcript from the transferring institution. Application for transfer credits is accepted only after the student has earned 12 credits at Polytechnic.

**Doctor of Philosophy in Civil Engineering**

Students wishing to pursue a doctoral degree in environmental engineering and environmental science may do so under the PhD in civil engineering and environmental science. For detailed information, please consult the Civil Engineering Program section of this catalog.

**Graduate Courses**

For the list of graduate courses, please consult the Environmental and Water Resources Engineering section of the Civil Engineering Program in this catalog.

**Masters**

**Environmental Engineering, M.S.**

**Goals and Objectives**

The MS in Environmental Engineering prepares graduates to plan, functionally design, control, operate and manage municipal and industrial pollution-prevention systems. Students are exposed to a learning atmosphere that provides a mix of theoretical and practical approaches. Courses include a mix of presentations, project exercises and practical problem solutions.

Specific program objectives are to provide the skills necessary to:

- fundamentally understand the science and engineering of natural and man-made environmental systems;
- functionally design air, water and waste treatment systems and components;
- control and operate environmental facilities;
- understand the modeling and simulation of environmental systems; and
- participate actively in multidisciplinary teams to solve environmental problems.

**Program Requirements**

**Core Courses: 12 Credits**
CE 7373 Environmental Chemistry and Microbiology

3 Credits This course introduces the chemistry and microbiology of polluted and natural waters, including applications of principles developed.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CE 7423 Water and Wastewater Treatment

3 Credits This course covers the physical, chemical and biological principles of process design and treatment of water and wastewater. Topics include aeration, filtration, softening, chemical treatment, coagulation, occulation, desalination, and taste and odor control.

Corequisite(s): CE 7373.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and select 2 of the following 4 courses:

CE 7223 Hydrology

3 Credits This course covers: Hydraulic cycle; meteorological considerations; analysis of precipitation, runoff, unit hydrographs, flood routing and reservoir storage; principles of groundwater hydrology; and an introduction to frequency analysis of floods and droughts.

Prerequisite(s): Adviser's approval and MA 1124 and CE 2213 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7233 Groundwater Hydrology and Pollution

3 Credits This course looks at the characteristics of confined and unconfined flow of water through porous media; groundwater and well hydraulics; quality of groundwater; environmental influences; groundwater pollution; management aspects of groundwater and groundwater modeling.

Prerequisite(s): CE 2213 or equivalent, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7753 Environmental Systems Management

3 Credits This course provides an overview of information technologies as applied to the remote sensing of environmental infrastructure systems, and includes the development of infrastructure system databases to assist complex decision-making on environmental infrastructures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 7673 Environmental Impact Assessment

3 Credits This course examines legal and technical requirements in preparing environmental impact statements. Considerations include legal and technical requirements, the procedure and the interdisciplinary nature of the analysis. Topics include overall impact evaluation, categories of impacts, problem definition, quantification of impact, methods used in analysis, field evaluations, mitigations, hearing procedures and management. Practical examples and case studies are used.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Major Courses: 9 Credits

Select 3 of the following 5 courses:

CE 7393 Advanced Environmental Chemistry and Microbiology

3 Credits This course explores advanced topics in chemistry and microbiology of polluted and natural wastewater treatment.

Prerequisite(s): CE 7373 or equivalent.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7433 Advanced Water and Wastewater Treatment

3 Credits This course covers further the processes discussed in CE 7423. Topics include sedimentation, adsorption, aerobic and anaerobic biological treatment, sludge treatment and disposal.

Prerequisite(s): CE 7423. Corequisite(s): CE 7393.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7473 Analysis of Stream and Estuary Pollution

3 Credits This course covers dispersal and decay of contaminants introduced into lakes, streams, estuaries and oceans, and the effects of pollutants on chemical quality and ecology of receiving waters.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8493 Environmental Geotechnology

3 Credits This course covers: Clay mineralogy; soil water interaction processes; chemical transport through soils; hydraulic conductivity, diffusion and attenuation mechanisms; water-disposal systems; design of land-fills, seepage barriers and cut-off walls; geo-environmental site characterization techniques; and soil remediation techniques.

Prerequisite(s): CE 3153 or equivalent.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7703 Solid Waste Management
Credits

This course covers engineering aspects of solid waste collection, transport and disposal, including incineration, sanitary landfill, composting, recovery and reutilization. Also covered is the economic evaluation of factors affecting selection of disposal methods.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Master Project or Theses: 3-6 Credits

- CE 9963 MS Project in Civil & Urban Engineering 3 Credits
- CE 9973 Thesis for MS in Civil Engineering 6 Credits

Electives: 3-6 Credits

3-6 credits of approved engineering and science electives

Total: 30 Credits

Environmental Science, M.S.

Goals and Objectives

The primary goal of the MS in Environmental Science is to prepare professionals to:

- fundamentally understand the science and applied engineering of natural and manmade environmental systems;
- evaluate the interactions between man and the environment and control adverse impacts of pollution on ecological systems;
- understand the monitoring and laboratory analysis of environmental systems; and
- participate actively in a multidisciplinary team of professionals to solve environmental problems.

Program Requirements

1. Core Courses: 9 Credits

CE 7373 Environmental Chemistry and Microbiology

3 Credits This course introduces the chemistry and microbiology of polluted and natural waters, including applications of principles developed.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CE 7423 Water and Wastewater Treatment

3 Credits This course covers the physical, chemical and biological principles of process design and treatment of water and wastewater. Topics include aeration, filtration, softening, chemical treatment, coagulation, occlusion, desalination, and taste and odor control.

Corequisite(s): CE 7373.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7223 Hydrology

3 Credits This course covers: Hydraulic cycle; meteorological considerations; analysis of precipitation, runoff, unit hydrographs, flood routing and reservoir storage; principles of groundwater hydrology; and an introduction to frequency analysis of floods and droughts.

Prerequisite(s): Adviser’s approval and MA 1124 and CE 2213 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

2. Twelve credits of approved courses

in Environmental Engineering, Chemical and Biological Engineering at NYU-Poly, and NYU Environmental Health Science, including up to 6 approved transfer credits.

Suggested Courses:

- BIOL-GA 1004 Environmental Health (NYU CAS) 3 Credits
- EHSC-GA 1010 Weather, Air pollution and Health (NYU CAS) 3 Credits
- EHSC-GA.1006 Toxicology (NYU CAS) 3 Credits

CE 7233 Groundwater Hydrology and Pollution

3 Credits This course looks at the characteristics of confined and unconfined flow of water through porous media; groundwater and well hydraulics; quality of groundwater; environmental influences; groundwater pollution; management aspects of groundwater and groundwater modeling.

Prerequisite(s): CE 2213 or equivalent, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7393 Advanced Environmental Chemistry and Microbiology

3 Credits This course explores advanced topics in chemistry and microbiology of polluted and natural wastewater treatment.
Prerequisite(s): CE 7373 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7433 Advanced Water and Wastewater Treatment

3 Credits This course covers further the processes discussed in CE 7423. Topics include sedimentation, adsorption, aerobic and anaerobic biological treatment, sludge treatment and disposal.
Prerequisite(s): CE 7423. Corequisite(s): CE 7393.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7473 Analysis of Stream and Estuary Pollution

3 Credits This course covers dispersal and decay of contaminants introduced into lakes, streams, estuaries and oceans, and the effects of pollutants on chemical quality and ecology of receiving waters.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7673 Environmental Impact Assessment

3 Credits This course examines legal and technical requirements in preparing environmental impact statements. Considerations include legal and technical requirements, the procedure and the interdisciplinary nature of the analysis. Topics include overall impact evaluation, categories of impacts, problem definition, quantification of impact, methods used in analysis, field evaluations, mitigations, hearing procedures and management. Practical examples and case studies are used.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7703 Solid Waste Management

3 Credits This course covers engineering aspects of solid waste collection, transport and disposal, including incineration, sanitary landfill, composting, recovery and reutilization. Also covered is the economic evaluation of factors affecting selection of disposal methods.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7753 Environmental Systems Management

3 Credits This course provides an overview of information technologies as applied to the remote sensing of environmental infrastructure systems, and includes the development of infrastructure system databases to assist complex decision-making on environmental infrastructures.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7523 Air Pollution
3 Credits This course discussed the causes and effects of air pollution, methods of sampling, interpretation of data, meteorological aspects and methods of air-pollution control.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7553 Environmental Toxicology**

3 Credits This course stresses basic concepts essential to understanding the action of exogenous chemical agents on biological systems. The course covers principles of absorption and the effects of chemical agents on metabolism. The pathways of metabolism of these compounds and the principles of elimination from biological systems are discussed. The course includes discussion of toxicokinetics, types of toxic responses and the current experimental methods of toxicity.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 9963 MS Project in Civil & Urban Engineering**

3 Credits This project involves analytical, design or experimental studies in civil engineering guided by a faculty adviser and following departmental guidelines. A written report is required.

Prerequisite(s): Degree status and project adviser’s approval.

**CE 997X MS Thesis in Civil & Urban Engineering Department**

6 Credits This course is an original investigation or design in the student’s principal field of study prepared and closely supervised by a faculty adviser. Candidates must successfully defend theses orally. Registration for a minimum of 6 credits is required.

Prerequisite(s): Degree status and thesis adviser’s approval.

3. Nine credits of approved elective courses

Total: 30 Credits

**Transportation**

Program Adviser: Elena S. Prassas

The Department of Civil Engineering offers graduate degree programs in transportation leading to the following degrees:

- Transportation Planning and Engineering, M.S.
- Transportation Management, M.S.
- Transportation Planning and Engineering, Ph.D.
Master of Science programs are practice-oriented with a strong foundation in underlying principles and methods. The PhD is intended for students with a strong research interest and a desire to advance the state-of-the-art as a result of that research.

A number of graduate certificate programs are also available in:

- Traffic Engineering
- Transportation Planning
- Transportation Management

Graduate certificates, which entail completion of 12 focused credits of study, offer the opportunity for students to specialize in one of the areas of transportation planning and engineering. It also allows students not ready to embark on a full Master of Science degree program to receive formal recognition for more focused study.

**Requirements for Master of Science Programs**

**Admission Requirements**

To be eligible for admission as an MS candidate, applicants must hold at least a baccalaureate degree from an acceptable institution. Students pursuing degrees in transportation planning and engineering must also have a firm background in quantitative analytic skills. If admitted, students lacking such skills must take remedial courses in addition to degree requirements to strengthen their analytic competency.

All foreign students admitted to transportation programs must take an examination in English before registration. Based upon an evaluation of the examination, they may be required to take up to two additional courses in English as a Second Language (ESL) for which no graduate credit is given.

**Grade Requirements**

To earn Master of Science degrees or graduate certificates, students must have a 3.0 GPA or better in all graduate courses and in all guided studies (readings, projects, theses). Averages are separately computed for courses and guided studies. Transfer credits from other institutions are omitted from this average.

In addition, transportation program students are required to have an overall 3.0 GPA in all courses required for their degree or certificate program. Students may not repeat a course toward any of the transportation-degree programs more than once.

**Analytic Background**

All applicants for MS or graduate certificate programs in transportation must show evidence of quantitative analytic ability, generally including a minimum of two years of college mathematics. A college-level course in statistics is desirable.

**Advising**

Each student in the Master of Science program is assigned a faculty adviser. It is important that students frequently contact their adviser during their studies.

Students must meet with their academic adviser before each registration and at any other time they need advice or consultation. Students must have a detailed program of study formally approved by the adviser before registration. Advisers also handle requests for waiver of certain degree requirements. Such waivers must be approved in writing and must be entered into the student’s departmental file. Where specific courses are waived, the permission of the course instructor is also required. When
waivers are granted, students may be required to take other specific courses in their place; otherwise additional electives will be selected.

Students registering for any guided studies (readings, projects, theses) are assigned project advisers for each such activity. The project adviser may or may not be the same as the student’s academic adviser, depending upon the subject matter. To register for any guided study activity, students must submit written proposals for the topic(s) to be covered to a project adviser before registration. To register, students must obtain the written approval of the project adviser and the academic adviser.

In addition to academic and project advisers, students studying under research or teaching fellowships are assigned fellowship advisers. Normally, these would be either the principal investigator of the research effort funding the fellowship or the director of the academic area in which the teaching fellowship is awarded.

While academic advisers consult and advise students, it is the student’s responsibility to fulfill all degree requirements and to submit all proper forms and applications.

**Transfer Credits**

The minimum number of credits students must take at Polytechnic for an MS degree is 21 credits. All credits for a graduate certificate must be taken at Polytechnic.

Students may transfer up to 9 credits of acceptable courses toward a MS degree, subject to the approval of the academic adviser. To be transferred, the courses must relate to the transportation program and be from an acceptable institution. A grade of B or better is required to receive transfer credit. Courses graded on a pass/fail basis are not considered for transfer unless accompanied by a detailed written evaluation by the instructor of the course. All transfer requests must be accompanied by an official transcript from the transferring institution. Applications for transfer credits are accepted only after students have earned 12 credits at Polytechnic. Validation credits by examination may not be used toward any transportation degree program.

**Graduate Certificate Programs**

The Transportation Program offers graduate certificates to students completing 12 credits of study in specified areas of concentration. This program is for students who do not wish to commit to a full advanced degree. Applicants may be students with bachelor’s degrees seeking to specialize in an aspect of transportation or those with advanced degrees wishing additional course work in a highly focused area of the profession.

Students in certificate programs may apply for transfer to degree programs without any loss of credits, assuming they are admitted to the degree program and that the courses are related to the degree.

Admission to a certificate program does not guarantee admission to a full degree program.

**Graduate Certificate**

**Traffic Engineering Graduate Certificate**

**Certificate in Traffic Engineering**
Required Courses

TR 6013 Fundamental Concepts in Transportation

3 Credits This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.

Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6313 Traffic Control and Signalization I

3 Credits Traffic controls are imposed to provide for safe, efficient and orderly movement of people and goods on our nation’s street and highway systems. Traffic control is examined in the urban context in which both vehicles and pedestrians be accommodated. Techniques for quantifying traffic stream behavior are described. Federal, state and local standards for designing and implementing control devices are presented. Selection of control measures, design and timing of traffic signals at individual intersections and in arterial networks is treated in detail. Use and application of current computer tools – HCS++ and Synchro – are illustrated.

Prerequisite(s): TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6323 Traffic Control and Signalization II

3 Credits In furtherance of the material covered in TR 6313, emphasis is on the arterial as a facility and on systems concepts such as traffic calming, access management and roundabouts as a design element. Also covered are network problems induced by traffic congestion and remedies such as critical intersection control, network metering, oversaturated control policies and real time sensing, and traffic impacts from growth and development, including assessment and mitigation. The course employs the use of modern tools, including VISSIM, Synchro/SIMTraffic and HCS++, and two projects must be completed by students working in teams. This course should be taken in the student’s last or penultimate semester.

Prerequisite(s): TR 6313 or equivalent and TR 6113 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Select One of the Following:

TR 7323 Design of Parking and Terminal Facilities

3 Credits This course covers design techniques and approaches to a variety of pedestrian and vehicular needs in conjunction with access to land functions. Parking serves as the primary access interface to many land facilities, from shopping centers and sports facilities, to medium- and high-density residential developments. The planning and design of parking facilities, and the planning
of access and egress from these facilities, is critical to the economic success of a development. Terminals are inter-modal interface facilities involving the transfer of people and/or goods from one mode of transportation to another. This course covers essential elements of terminal planning and design, including transit stations and terminals, major goods terminals at ports and railheads and others. The design of pedestrian space and ways within terminal structures is also treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7343 Urban Freeways and Intercity Highways**

*3 Credits* This course focuses on the design, analysis, control and management of urban freeways and intercity highways of all classes. The course covers geometric design standards and principals, the application of highway capacity and level of service analysis methodologies (including HCS++), marking and signing, speed control and modern freeway management systems and approaches.

Prerequisite(s): TR 6013, TR 6313, or equivalents, or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7033 Transportation Safety and Security**

*3 Credits* Technology, legislation and market forces have contributed to improved transportation safety for decades. But one must consider which metrics are most relevant for which modes, the role of demographics and traffic levels and other factors when analyzing and predicting safety trends. The course pays attention to a systems view, to metrics by mode and to both standard field and statistical analyses. Consistent with current priorities, the course addresses security as well as safety issues.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6223 Intelligent Transportation Systems and Their Applications**

*3 Credits* This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Transit Management Graduate Certificate**

Certificate in Transit Management
Required Courses

TR 6013 Fundamental Concepts in Transportation

3 Credits This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.

Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7133 Urban Public Transportation Systems

3 Credits This course provides a thorough understanding of policy, planning, operational and technical issues that affect urban public transportation. It includes the historical development of cities and the rise of urban transport. Also covered are the characteristics of various urban transportation modes (their specific operating and infrastructure characteristics), as well as key elements that are critical to service provision, such as service planning, scheduling, fare collection, communication and signaling, station design and customer service. The course offers a broad perspective on regional planning, capital programming and policy matters. Special focus will be on emerging technologies and their practical applications.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- TR 7233 Transportation Management 3 Credits

Select One of the Following:

TR 6213 Transportation Economics and Finance

3 Credits This course provides the basic principles of engineering economic analysis and their application to transportation projects. Half of the course covers the concepts of present worth, capital recovery, sinking funds and annual cost applied to economic comparisons and evaluations of alternatives. The second half of the course delves into financing transportation and how government policy on transportation affects the economy and environs at the local, state and federal levels. Historical perspectives on the financing of highway systems, public transportation systems and transportation agencies are presented. Other subjects include privatization, innovative financing methods, business plans.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- TR 7233 Transportation Management 3 Credits

Transportation Planning Graduate Certificate
Certificate in Transportation Planning

Required Courses

**TR 6013 Fundamental Concepts in Transportation**

3 Credits This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.

Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6113 Forecasting Urban Travel Demand**

3 Credits The purpose of this course is to study methods and models used in estimating and forecasting person travel in urban areas. The objective is to understand the fundamental relationships between land use, transportation level of service and travel demand, and to apply methods and state-of-the-practice models for predicting person travel on the transportation system.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7123 Transportation Planning and Congestion Management**

3 Credits This course provides a contextual understanding of urban transportation planning and its component activities. It helps students understand the enabling environment needed to sustain the planning process; to understand the causes of transportation congestion and its impacts on transportation users and communities; to set forth a vision for congestion management; and to develop and evaluate strategies and policies that achieve the vision.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Select One of the Following:

**TR 6213 Transportation Economics and Finance**

3 Credits This course provides the basic principles of engineering economic analysis and their application to transportation projects. Half of the course covers the concepts of present worth, capital recovery, sinking funds and annual cost applied to
economic comparisons and evaluations of alternatives. The second half of the course delves into financing transportation and how government policy on transportation affects the economy and environs at the local, state and federal levels. Historical perspectives on the financing of highway systems, public transportation systems and transportation agencies are presented. Other subjects include privatization, innovative financing methods, business plans.

Prerequisite(s): TR 6013 or permission of adviser
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7133 Urban Public Transportation Systems

3 Credits This course provides a thorough understanding of policy, planning, operational and technical issues that affect urban public transportation. It includes the historical development of cities and the rise of urban transport. Also covered are the characteristics of various urban transportation modes (their specific operating and infrastructure characteristics), as well as key elements that are critical to service provision, such as service planning, scheduling, fare collection, communication and signaling, station design and customer service. The course offers a broad perspective on regional planning, capital programming and policy matters. Special focus will be on emerging technologies and their practical applications.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6223 Intelligent Transportation Systems and Their Applications

3 Credits This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Masters

Transportation Management, M.S.

Master of Science in Transportation Management

The program is for practicing professionals who deal with a public transit system, and agency and/or facility management. It combines basic management skills with a working knowledge of techniques and approaches to optimize transportation system results.

Goals and Objectives
The primary goal of the MS in Transportation Management is to prepare professionals to effectively and efficiently manage various transportation enterprises. The emphasis is on agencies, facilities and services in the public sector. Specific objectives of the program are to provide:

- a basic background in management skills and techniques, specifically as applied to public and private transportation organizations;
- basic understanding of the economic aspects of the transportation sector;
- an understanding of the importance of national, state and local transportation policy on public and private sector organizations;
- fundamental knowledge on some specific issues and problems in managing and operating public transportation facilities.

Program Requirements

Required Courses: 18 Credits

The following courses are required of all students:

**TR 6013 Fundamental Concepts in Transportation**

3 Credits This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.

Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6213 Transportation Economics and Finance**

3 Credits This course provides the basic principles of engineering economic analysis and their application to transportation projects. Half of the course covers the concepts of present worth, capital recovery, sinking funds and annual cost applied to economic comparisons and evaluations of alternatives. The second half of the course delves into financing transportation and how government policy on transportation affects the economy and environs at the local, state and federal levels. Historical perspectives on the financing of highway systems, public transportation systems and transportation agencies are presented. Other subjects include privatization, innovative financing methods, business plans.

Prerequisite(s): TR 6013 or permission of adviser
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6223 Intelligent Transportation Systems and Their Applications**

3 Credits This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination
and integration of ITS components are treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7223 Management of Transit Maintenance and Operations

3 Credits This course provides a comprehensive understanding of modern public transportation systems, emphasizing their technology and operational practices. Planning and management aspects are also covered. Such operational management issues as maintenance practices, scheduling, procurement and labor relations are broadly outlined and discussed. Planning and capital programming issues are also treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7213 Transportation Management

3 Credits This course presents an overview of the transportation management profession. Levels of management and unique objectives of management in the transportation sector are presented and discussed. Management structures for private and public transportation organizations are analyzed. Management practices are treated from the perspective of organizations, optimization of the use of public resources, legislative and legal contexts and operations.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7133 Urban Public Transportation Systems

3 Credits This course provides a thorough understanding of policy, planning, operational and technical issues that affect urban public transportation. It includes the historical development of cities and the rise of urban transport. Also covered are the characteristics of various urban transportation modes (their specific operating and infrastructure characteristics), as well as key elements that are critical to service provision, such as service planning, scheduling, fare collection, communication and signaling, station design and customer service. The course offers a broad perspective on regional planning, capital programming and policy matters. Special focus will be on emerging technologies and their practical applications.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives: 12 Credits

Students will take elective courses in the following areas:

- MG General Management Courses 6-9 Credits (with necessary prerequisites)
- TR General Transportation Courses 3-6 Credits (with necessary prerequisites)

Transportation Planning and Engineering, M.S.
Master of Science in Transportation Planning and Engineering

The MS program has a strong foundation in traffic engineering, transportation planning, transportation economics, public transportation systems and intelligent transportation systems. Students are exposed to a learning atmosphere that provides a meaningful combination of theoretical and practical approaches. Courses include a mix of presentations, workshop and project exercises, and practical problem solutions.

The program focuses on (1) material suited to the issues and projects students will face on the job, so that they are immediately productive; (2) material packaged by the course so that each course provides specific skills and knowledge, enabling the student to be immediately productive; (3) project-based learning in multiple courses, as an underlying approach to teaching the courses and the program; (4) modern tools integrated into the courses, including, but not limited to: Synchro and SIM-Traffic and other simulation programs, HCS+, AutoCAD templates for intersection design, and data collection and processing software; (5) design problems taught through a project/case studies approach; (6) statistics integrated into courses, with moderately advanced skills in Excel and Word expected in all courses (but not explicitly taught).

The program includes a strong focus on the rapidly emerging field of intelligent transportation systems. This field applies telecommunications and information technology to solving a variety of transportation functions, from route guidance systems to automated toll collection systems to the automated highway.

Goals and Objectives

The primary goal of the MS in Transportation Planning and Engineering is to prepare transportation professionals to plan, functionally design, control and operate facilities, systems and services that satisfy the demand for passenger and freight transportation. Specific objectives of the program are to provide the skills necessary to:

- Fundamentally understand the nature and generation of transportation demands;
- Understand the political, policy and economic forces that affect transportation demands and the public framework in which they are addressed;
- Functionally design transportation systems and components;
- Control and operate traffic and other transportation facilities; and
- Apply information technologies to intelligent transportation systems.

Program Requirements

Required Courses: 18 Credits

TR 6013 Fundamental Concepts in Transportation

3 Credits This course provides the contextual foundations to study urban transportation systems, using performance criteria reflecting the perspectives of system providers/owners, users and communities. The connection between transportation supply, travel demand, service volume and level of service is explored and quantified for various travel modes. The impacts of transportation system performance on travel behavior, communities and the environment is discussed. The role of technology and institutions is examined with case examples.
Prerequisite(s): Graduate status or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6113 Forecasting Urban Travel Demand

3 Credits The purpose of this course is to study methods and models used in estimating and forecasting person travel in urban areas. The objective is to understand the fundamental relationships between land use, transportation level of service and travel demand, and to apply methods and state-of-the-practice models for predicting person travel on the transportation system.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6313 Traffic Control and Signalization I

3 Credits Traffic controls are imposed to provide for safe, efficient and orderly movement of people and goods on our nation’s street and highway systems. Traffic control is examined in the urban context in which both vehicles and pedestrians be accommodated. Techniques for quantifying traffic stream behavior are described. Federal, state and local standards for designing and implementing control devices are presented. Selection of control measures, design and timing of traffic signals at individual intersections and in arterial networks is treated in detail. Use and application of current computer tools – HCS++ and Synchro – are illustrated.

Prerequisite(s): TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6323 Traffic Control and Signalization II

3 Credits In furtherance of the material covered in TR 6313, emphasis is on the arterial as a facility and on systems concepts such as traffic calming, access management and roundabouts as a design element. Also covered are network problems induced by traffic congestion and remedies such as critical intersection control, network metering, oversaturated control policies and real time sensing, and traffic impacts from growth and development, including assessment and mitigation. The course employs the use of modern tools, including VISSIM, Synchro/SIMTraffic and HCS++, and two projects must be completed by students working in teams. This course should be taken in the student’s last or penultimate semester.

Prerequisite(s): TR 6313 or equivalent and TR 6113 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6213 Transportation Economics and Finance

3 Credits This course provides the basic principles of engineering economic analysis and their application to transportation projects. Half of the course covers the concepts of present worth, capital recovery, sinking funds and annual cost applied to economic comparisons and evaluations of alternatives. The second half of the course delves into financing transportation and how government policy on transportation affects the economy and environs at the local, state and federal levels. Historical perspectives on the financing of highway systems, public transportation systems and transportation agencies are presented. Other subjects include privatization, innovative financing methods, business plans.

Prerequisite(s): TR 6013 or permission of adviser
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
TR 6223 Intelligent Transportation Systems and Their Applications

3 Credits This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives: 9-12 Credits

Additionally all students would select 9 to 12 credits from the following list of electives:

TR 6023 Analytic Methods in Transportation

3 Credits This course introduces transportation students to a variety of analytic techniques as they are commonly applied to transportation issues. The course covers basic statistics and statistical analyses and their application to transportation studies, including traffic characteristics studies and survey instruments. Mathematical techniques for analyzing transportation queues are covered. Statistical tests for significance of improvement impacts are illustrated. Regression analysis applied to developing transportation models is covered. An introduction into traffic simulation is also given.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7123 Transportation Planning and Congestion Management

3 Credits This course provides a contextual understanding of urban transportation planning and its component activities. It helps students understand the enabling environment needed to sustain the planning process; to understand the causes of transportation congestion and its impacts on transportation users and communities; to set forth a vision for congestion management; and to develop and evaluate strategies and policies that achieve the vision.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7133 Urban Public Transportation Systems

3 Credits This course provides a thorough understanding of policy, planning, operational and technical issues that affect urban public transportation. It includes the historical development of cities and the rise of urban transport. Also covered are the characteristics of various urban transportation modes (their specific operating and infrastructure characteristics), as well as key elements that are critical to service provision, such as service planning, scheduling, fare collection, communication and signaling, station design and customer service. The course offers a broad perspective on regional planning, capital programming and policy matters. Special focus will be on emerging technologies and their practical applications.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
TR 7323 Design of Parking and Terminal Facilities

3 Credits This course covers design techniques and approaches to a variety of pedestrian and vehicular needs in conjunction with access to land functions. Parking serves as the primary access interface to many land facilities, from shopping centers and sports facilities, to medium- and high-density residential developments. The planning and design of parking facilities, and the planning of access and egress from these facilities, is critical to the economic success of a development. Terminals are inter-modal interface facilities involving the transfer of people and/or goods from one mode of transportation to another. This course covers essential elements of terminal planning and design, including transit stations and terminals, major goods terminals at ports and railheads and others. The design of pedestrian space and ways within terminal structures is also treated.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7033 Transportation Safety and Security

3 Credits Technology, legislation and market forces have contributed to improved transportation safety for decades. But one must consider which metrics are most relevant for which modes, the role of demographics and traffic levels and other factors when analyzing and predicting safety trends. The course pays attention to a systems view, to metrics by mode and to both standard field and statistical analyses. Consistent with current priorities, the course addresses security as well as safety issues.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7233 Transportation Management

TR 7243 Intelligent Transportation Systems: Deployments and Technologies

3 Credits Transportation infrastructure deploys a wide range of modern technology to provide service to travelers, the general public and private entities. This technology enables other systems to function effectively and serve societal needs. This course focuses on data communications and applications in intelligent transportation systems: communications alternatives and analyses, emerging technologies, geographic information systems (GIS) and global positioning systems (GPS).

Prerequisite(s): TR 6223 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 7343 Urban Freeways and Intercity Highways

3 Credits This course focuses on the design, analysis, control and management of urban freeways and intercity highways of all classes. The course covers geometric design standards and principals, the application of highway capacity and level of service analysis methodologies (including HCS++), marking and signing, speed control and modern freeway management systems and approaches.

Prerequisite(s): TR 6013, TR 6313, or equivalents, or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 8013 Selected Topics in Transportation I
3 Credits These courses are given as needed to present material on current topical subjects that are not expected to be given on a regular basis. The topic(s) for each offering are indicated and are listed on the student's transcript. These courses may be taken more than once if the listed topics are different.

Prerequisite(s): TR 6013 Fundamental Concepts in Transportation and as approved for the topic(s); to be specified for each offering.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

TR 8023 Selected Topics in Transportation II

3 Credits These courses are given as needed to present material on current topical subjects that are not expected to be given on a regular basis. The topic(s) for each offering are indicated and are listed on the student’s transcript. These courses may be taken more than once if the listed topics are different.

Prerequisite(s): TR 6013 Fundamental Concepts in Transportation and as approved for the topic(s); to be specified for each offering.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 900x Readings in Transportation

Variable Credits This is an individually guided effort involving research into a topic of interest, usually growing from a course the student has taken. Readings courses should not duplicate material available in a regularly scheduled course, but should involve additional research on a topic or topics of interest to the student that is related to a course or courses. A formal written report is required. The student must have a faculty adviser who agrees to work with them and an agreed-upon topic before registering. The student may register for 1 to 3 credits for a readings effort, in proportion to the effort and as approved by the supervising instructor.

Prerequisite(s): Permission of supervising instructor.

TR 997X MS Thesis in Transportation

3 Each Credits Students electing to take a 6-credit MS Thesis commit to a significant individually guided research effort, resulting in a formally defended thesis report, bound in accordance with Institute requirements.

Prerequisite(s): MS degree status and permission of thesis adviser.

Note:

MS students in the Transportation Planning and Engineering program may take 3 credits of free electives from any graduate course offering at Polytechnic, assuming that the student has the necessary prerequisites. Adviser approval is required for all elective selections.

Doctorate
Transportation Planning and Engineering, Ph.D.

Doctor of Philosophy in Transportation Planning and Engineering

The PhD in Transportation is a research-oriented degree intended for those whose goal is a career in basic transportation research and/or teaching at the Institute level or in private research organizations.

Goals and Objectives

The fundamental goal of the PhD in Transportation Planning and Engineering is to develop professionals with strong research skills capable of advancing the profession of transportation planning and engineering through their work. Specific objectives of the program are to provide the skills necessary to:

- develop a strong and deep fundamental knowledge about the profession of transportation planning and engineering;
- develop the knowledge and skills to perform independent fundamental research in transportation planning and engineering;
- produce fundamental research that meaningfully advances the state-of-the-art of the profession of transportation planning and engineering.

Program Requirements

Students pursuing the PhD in Transportation Planning and Engineering generally specialize in one of the following subject areas:

- Transportation planning
- Traffic engineering
- Intelligent transportation systems
- Transportation safety

Other focus areas are possible and can be developed with the help of faculty advisers. All subject areas, of course, must be relevant to the degree sought and have a faculty member willing and able to guide the student’s research.

Program Administration

All graduate applications are processed through the civil engineering departmental office, which distributes applications to the graduate coordinator. Graduate program coordinators formally implement admission decisions, in accordance with departmental regulations. Coordinators consult with other department faculty as needed. They are also responsible for keeping records for all graduate students in their program areas, and for processing graduation audits for students in their program areas.

The graduate coordinators form the departmental Graduate Committee. All PhD applications are reviewed by the committee, and admissions decisions are made by the committee and implemented by the graduate coordinator.

For each registration, the student’s program must be approved by the academic adviser and signed by the transportation program coordinator.
Admission Criteria to PhD Program

Admission to the PhD in Transportation Planning and Engineering requires an MS in Transportation Planning and Engineering or equivalent, with a GPA of 3.5 or better (on a 0-4 scale).

Admission to PhD program does not require GREs (Graduate Record Examination), but applicants are encouraged to take these examinations. If these examinations are taken, the student must submit the results for consideration.

Foreign applicants must take the TOEFL examination and submit the results for consideration.

The “equivalent” of the MS degree can be achieved in several ways. The candidate may have an MS degree with a different title that covers substantially the same material. More generally, applicants must demonstrate that they have the equivalent of all undergraduate and master’s level course work in order to pursue doctoral level work in the major area. Further, “equivalence” is evaluated based on the totality of the student’s undergraduate and graduate record, not course-by-course.

Because admission to a PhD program requires a related MS (or equivalent), those applicants who have not yet achieved a master’s degree would normally be admitted as MS students. They are expected to earn an MS degree while completing their major and minor course requirements. In rare cases, an applicant with only a BS degree may be directly admitted into the PhD program with the written approval of the department head.

Doctoral Committees

Upon admission, every PhD student is assigned an academic adviser, who is selected by the department head. Any member of the civil engineering faculty can be an academic adviser to a graduate student. In cases where a student is supported on a research contract, the principal investigator of the contract would normally be appointed as the academic adviser for the student. Where a student has a particular research interest and is working with a particular faculty member, the student may request that the faculty member be appointed as academic adviser. In rare cases where a PhD student enters the program without a prior selection of a major area of study, the initial academic adviser will be the Graduate Coordinator of the transportation program.

In fulfilling their academic requirements, PhD candidates will deal with two advisory committees:

**Academic Advisory Committee:** The student’s academic adviser works out a program of courses to fulfill major and minor requirements for the PhD. The Academic Advisory Committee generally will comprise the academic adviser and one faculty member for each minor area of study. The Academic Advisory Committee guides the PhD student’s work through the successful completion of a qualifying examination. A letter signed by the academic adviser and approved by the department head is placed in the student’s file, indicating the composition of the Academic Advisory Committee.

**Dissertation Committee:** The Dissertation Committee is formed immediately after the student passes the qualifying examination. It comprises a major adviser, a dissertation adviser and a minor adviser for each minor the student has pursued. Additional faculty members may also be on the Dissertation Committee. The Dissertation Committee may be the same as the Academic Advisory Committee, or may be different. The Dissertation Committee guides the student’s course and research work after the student has passed the qualifying examination. The Dissertation Committee must be formally assigned and approved by the department head and filed with the Office of Graduate Academics. The major adviser must be a fulltime faculty member of the Department of Civil Engineering. The major and dissertation advisers may be the same individual.

Doctoral Degree Requirements

To earn a PhD in Transportation Planning and Engineering, the following requirements must be met:

- Fifty-one credits of graduate work (not including the PhD dissertation) in relevant major and minor areas of study beyond the bachelor’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale).
• Completion and successful defense of a 24-credit dissertation related to the major area of study. Dissertations must consist of original research that meaningfully advances the state-of-art in the subject area of the research and should result in the publication of at least one paper in a strictly peerreviewed technical journal related to the subject. A grade of B or better must be achieved for the dissertation.

• Completion of two minor areas of study, each consisting of between 9 and 12 credits of graduate work. At least one minor area must be outside the transportation area.

• Residency requirements for the PhD in Transportation Planning and Engineering include the 24-credit dissertation plus a minimum of 9 credits of applicable graduate course work taken at Polytechnic.

In satisfying the 51-credit course requirement, the student must satisfy all requirements for the major and minor areas selected, or their equivalent.

In satisfying these basic PhD requirements, students must also satisfy one of the two following conditions:

• Thirty-nine credits of approved graduate course work, not including individual guided studies (readings, projects, theses, etc.) beyond the bachelor’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale).

• Twenty-one credits of related graduate course work beyond the master’s degree, with an average grade of B or better (cumulative average of 3.0 or better on a 0-4 scale).

Satisfying condition 2 requires that the department accept the student’s MS degree in toto without regard to its specific content. This requires a recommendation from the department’s Graduate Committee and the approval of the department head.

Transfer Credits

Transfer credits for PhD students can be awarded course by course. Alternatively, a MS degree from another institution may be accepted for transfer in toto. In the former case, a maximum of 42 credits of approved graduate work may be transferred. The latter requires a recommendation from the department’s Graduate Committee and the approval of the department head. Transfer credits are awarded generally at the time of admission and must be approved by the academic adviser, the transportation graduate coordinator and the department head.

Qualifying Examination

Departmental qualifying examinations for the PhD in Transportation Planning and Engineering are given once a year (usually in June or July) and are coordinated with other qualifying examinations in the department. If sufficient demand exists, a second qualifying examination may be scheduled in December or January. Every PhD student must pass a qualifying examination in the major area of study and in any in-department minor areas of study before becoming a candidate for the PhD. Further:

• No student may register for dissertation credits until the Qualifying Examination is passed.

• A Dissertation Committee cannot be formed until the student passes the Qualifying Examination.

• A student may take the Qualifying Examination twice. A third attempt is permitted only with the written recommendation of the Academic Advisory Committee and the approval of department head. In no case may a student take the examination more than three times.

• Students normally take the Qualifying Examination (for the first time) after successfully completing most of their course requirements in the major and independent minor areas of study.

The Qualifying Examination consists of a five-hour written portion and an oral portion of approximately one hour. Both written and oral portions of the examination focus on the student’s major and in-department minor. The oral portion may also explore higher-level skill areas required to successfully conduct independent research. Students are deemed to have passed the examination based upon an overall evaluation of the written and oral results. While some students may not be invited to the oral examination if they have done poorly in the written portion, invitation to the orals does not imply that the student has “passed” the written portion of the exam.
The Qualifying Examination is either “passed” or “failed.” A letter indicating the result of each examination is placed in the student’s graduate file. In rare cases, a student may be deemed to have “conditionally passed” the Qualifying Examination. This conditional status occurs in cases where the student does extremely well in all areas except for a single subject area in which weakness has been noted. Such students must follow a prescribed plan to strengthen their knowledge and skills in the area of weakness and must pass a special examination on the area of weakness within one calendar year. A student who has “conditionally passed” the Qualifying Examination may register for dissertation credits and may form a Dissertation Committee.

All transportation faculty members participate in submitting written problems for the qualifying examination, and in the grading process and in the oral examination. All departmental faculty members are welcome to observe any oral examination and to ask pertinent questions. Each student’s Academic Advisory Committee will have the opportunity to review the entire exam before it is administered and may suggest changes if it deems that the examination as presented is an inequitable test of the student’s abilities. Recommendations on the results of the examination are submitted by each student’s Academic Advisory Committee, augmented by any departmental faculty in the subdisciplines tested. The departmental faculty, acting as a whole, votes to accept or reject such recommendations at a meeting scheduled for this purpose.

**Dissertation Proposal**

Following passage of the Qualifying Examination and the appointment of a Dissertation Committee, the PhD candidate must submit a written Dissertation Proposal, outlining the subject of the proposed research. This proposal should be between 15 and 20 pages long and should address the following specific items:

- Description of the topic
- Literature review sufficient to insure that the work contemplated is original
- Research methodology(ies) to be used
- Data and/or laboratory needs and their availability to the student
- Anticipated outcomes

The Dissertation Proposal must be submitted within one semester of full-time study, or before 9 credits of dissertation credit are completed.

The Dissertation Proposal is orally presented and defended before the Dissertation Committee and other interested departmental faculty. The date of the oral defense and copies of the draft Dissertation Proposal must be made available to department faculty at least two weeks (14 calendar days) before the defense.

When the Dissertation Proposal is formally accepted, the Dissertation Adviser enters a letter into the student’s graduate file, indicating this acceptance, with a copy of the proposal. While the Dissertation Committee has reasonable flexibility to modify the proposal during the research, any significant change in focus area or methodology requires that an amended Dissertation Proposal be written and formally accepted following the same procedure noted herein.

**Dissertation Defense**

The culmination of the student’s PhD work is the oral presentation and defense of the final draft dissertation. A defense is generally scheduled after the Dissertation Committee has reviewed the draft dissertation and determined that it is complete and of sufficient quality to be presented and defended.

The defense is organized and scheduled by the Dissertation Committee. All Institute faculty members are invited to observe and ask questions at all Polytechnic dissertation defenses. Therefore, the date of the defense must be announced Institute-wide at least one month before the event, and copies of the draft dissertation must be available to any faculty member requesting one in a timely fashion and in no case less than two weeks before the defense.

**Urban Systems Engineering and Management**
The Department of Civil and Urban Engineering offers a graduate program in Urban Systems Engineering and Management, leading to the Master of Science. This program was developed as part of the Institute for Civil Infrastructure Systems (ICIS), supported by the National Science Foundation. Polytechnic Institute of NYU is a major partner institution in ICIS, a consortium effort led by New York University.

The primary objective of ICIS and of the Urban Systems Engineering and Management Program is to educate professionals with both engineering and non-engineering backgrounds to understand and manage major urban infrastructure systems and the problems they pose to society and government. It is not sufficient to have a technical understanding of the engineering aspects of urban infrastructure systems and their components. To manage this sector effectively, professionals must also understand the societal and political contexts that affect them. Issues of public policy, finance, monitoring and maintenance must all be understood more clearly.

This Master of Science program attempts to provide a broader exposure to the range of knowledge and skills needed to play a leading role in infrastructure management in an urban setting. Thus, the program includes elements of engineering and technology, management, economics, finance and public policy.

**Goals and Objectives**

The specific objectives of the Urban Systems Engineering and Management Program are to provide students with the following:

- A broad base of understanding of infrastructure management and policy issues;
- Analytic and decision-making skills that account for the political, economic and social impacts of infrastructure technologies;
- A broad overview of the full range of urban infrastructure systems;
- An integrated knowledge of the interactions and interdependencies of various urban infrastructure systems;
- Specialized management skills and techniques to apply to unique problems of the infrastructure segment.

**Admission Requirements**

Admission to the MS in Urban Systems Engineering and Management is open to professionals with BS or BA degrees and backgrounds in engineering, science, public policy, management, economics and/or finance. Necessary mathematics background, usually including undergraduate calculus, is required, as is an undergraduate GPA of 3.0 or better.

**Grade Requirements**

To earn graduate degrees or certificates, students must have a 3.0 GPA or better in all graduate courses and guided studies (readings, projects, theses, dissertations). Averages are separately computed for courses and guided studies. Transfer credits from other institutions are not included in this average.

**Analytical Background**

All applicants for this MS program must show evidence of quantitative analytic ability, generally, including a minimum of two years of college mathematics and a college-level course in statistics.

**Transfer Credits**
The residency requirement for the MS degree is 21 credits. This is the minimum number of credits that must be taken at NYU-Poly for an NYU-PolyMS degree.

Students may transfer up to 9 credits of acceptable courses toward an MS degree, subject to the approval of the academic adviser. To be transferred, the course(s) must be relevant to the program and from an acceptable institution. A grade of B or better is required for granting of transfer credit. Courses graded on a pass/fail basis are not considered for transfer unless accompanied by a detailed written evaluation by the course instructor. All transfer requests must be accompanied by an official transcript from the transferring institution. Applications for transfer credits are accepted only after the student has earned 12 credits at NYU-Poly.

**Advising**

Each student in the graduate program is assigned a faculty adviser. It is important that students maintain frequent contact with the adviser throughout their studies. Students must meet with their academic adviser before each registration and at any other time they need advice or consultation.

Students must have a detailed program of study formally approved by their adviser before registration. Advisers also handle requests for waiver of certain degree requirements, where warranted. Such waivers must be approved in writing and must be entered into the student’s departmental file. Where specific courses are waived, the approval of the course instructor is also required. When waivers are granted, students may be required take other specific courses in their place, or to select additional electives.

Students registering for any guided studies (readings, projects, theses) are assigned project advisers for each such activity. The project adviser may or may not be the same as the student’s academic adviser, depending upon the subject matter selected. To register for any guided study activity, students must submit written proposals for the topic(s) to be covered to a project adviser before registration. To register, the written approval of the project adviser is required in addition to the approval of the academic adviser.

While academic advisers consult and advise students, students are responsible for ensuring that all degree requirements are fulfilled and for submitting all proper forms and application.

**Masters**

**Urban Systems Engineering and Management, M.S.**

**Requirements for the Master of Science**

**Program Core: 15 Credits**

All students must complete the following five courses:

**CE 7813 Infrastructure Planning, Engineering and Economics**

3 Credits This course covers methods for identifying, formulating, preliminarily appraising and analyzing in detail individual projects and systems of civil engineering projects. Different approaches relevant to government agencies, public utilities, industrial firms and private entrepreneurs are discussed, as well as planning of projects to satisfy single and multiple purposes.
and objectives, meet local and regional needs and take advantage of opportunities for development. Also covered are financial and economic analyses, including sensitivity and risk analysis; mathematical models for evaluation of alternatives and optimization; and environmental, social, regional economic growth, legal and institutional and public involvement impacts of projects.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7843 Introduction to Urban Systems Engineering**

*3 Credits* This course provides a descriptive overview of key infrastructure systems and technologies that must be managed, operated and maintained. Systems treated include buildings and structures, water supply, solid and liquid waste handling and disposal, transportation, power, communications and information systems, health and hospitals, police and preprotection. The course explores the financial, political, administrative, legal and institutional settings of these systems and technologies. A portion of the course features distinguished guest lecturers who are experts in some of the systems and technologies included.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7853 Concepts and Implementation of Infrastructure Management Systems**

*3 Credits* This course reviews state-of-the-art, performance- monitoring and system-condition assessment methodologies as part of infrastructure management systems. Emphasis is on information technologies as applied to remote sensing and database development for urban systems management. Tools, such as GIS and dedicated databases for condition assessment are presented in a laboratory environment. Invited experts participate in such areas as transportation, water distribution and utilities.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 7673 Environmental Impact Assessment**

*3 Credits* This course examines legal and technical requirements in preparing environmental impact statements. Considerations include legal and technical requirements, the procedure and the interdisciplinary nature of the analysis. Topics include overall impact evaluation, categories of impacts, problem definition, quantification of impact, methods used in analysis, field evaluations, mitigations, hearing procedures and management. Practical examples and case studies are used.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8733 Infrastructure Financing: Structuring of a Deal**

*3 Credits* This course examines what it takes to structure a deal from a credit perspective, legally and financially, for domestic and international projects. In the domestic sector, the course focuses on transportation projects, examining the peculiarities and the uniqueness of the capital market. Examples are studied and recent changes are discussed in areas such as financing transportation projects and the dramatically changing nature of financing these projects. In the international sector, the course covers innovative financing techniques.

*Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
*Course is part of the Exec 21 program; special requirements (see Construction Management Program) or permission of adviser required.

Minor, Technical and Free Electives:

Each minor area of study includes: (1) three minor courses, required for the minor; and (2) two to three technical electives, available to all program students.

Students may elect not to take a specified minor area. They may, instead, take five or six technical electives from the approved list in any specified area. The number of technical electives is influenced by whether the student elects to do a 3-credit case study report or a 6-credit MS thesis, as described in a later section.

Minor Areas of Concentration

- Transportation Systems Management (TSM)
- Construction Management (CM)
- Environmental Systems Management (ESM)
- Civil Infrastructure Systems Management (CISM)

Because of course content, students selecting the CISM minor should hold a BS in Civil Engineering or the equivalent.

Minor in Transportation Systems Management

Credits required in the minor:

**TR 7223 Management of Transit Maintenance and Operations**

*3 Credits* This course provides a comprehensive understanding of modern public transportation systems, emphasizing their technology and operational practices. Planning and management aspects are also covered. Such operational management issues as maintenance practices, scheduling, procurement and labor relations are broadly outlined and discussed. Planning and capital programming issues are also treated.

*Prerequisite(s): TR 6013 or permission of adviser.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 6223 Intelligent Transportation Systems and Their Applications**

*3 Credits* This course introduces the concepts and applications of Intelligent Transportation Systems (ITS) and its growing role in the management of transportation systems. The course stresses the role of ITS as national policy, as specified in major transportation funding legislation – ISTEA, TEA21 and SAFETY-LU. A systems engineering approach to overall development of ITS technologies is stressed. Major components of ITS are discussed, and examples of their application treated. Coordination and integration of ITS components are treated.

*Prerequisite(s): TR 6013 or permission of adviser.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**TR 7133 Urban Public Transportation Systems**
This course provides a thorough understanding of policy, planning, operational and technical issues that affect urban public transportation. It includes the historical development of cities and the rise of urban transport. Also covered are the characteristics of various urban transportation modes (their specific operating and infrastructure characteristics), as well as key elements that are critical to service provision, such as service planning, scheduling, fare collection, communication and signaling, station design and customer service. The course offers a broad perspective on regional planning, capital programming and policy matters. Special focus will be on emerging technologies and their practical applications.

Prerequisite(s): TR 6013 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Approved Technical Electives in Transportation

- TR 6133 Travel Demand Forecasting 3 Credits

TR 7123 Transportation Planning and Congestion Management

This course provides a contextual understanding of urban transportation planning and its component activities. It helps students understand the enabling environment needed to sustain the planning process; to understand the causes of transportation congestion and its impacts on transportation users and communities; to set forth a vision for congestion management; and to develop and evaluate strategies and policies that achieve the vision.

Pre/Co-requisite: TR 6013 or permission of instructor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

TR 6213 Transportation Economics and Finance

This course provides the basic principles of engineering economic analysis and their application to transportation projects. Half of the course covers the concepts of present worth, capital recovery, sinking funds and annual cost applied to economic comparisons and evaluations of alternatives. The second half of the course delves into financing transportation and how government policy on transportation affects the economy and environs at the local, state and federal levels. Historical perspectives on the financing of highway systems, public transportation systems and transportation agencies are presented. Other subjects include privatization, innovative financing methods, business plans.

Prerequisite(s): TR 6013 or permission of adviser
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Additional electives may be approved by the adviser.

Minor in Construction Management

Required in Minor:

CE 8253 Project Management for Construction
This course covers topics specific to developing and coordinating large projects, including organizational structures, management functions, pricing and estimating project costs, bidding and contracting, risk allocation, scheduling, time and cost control, labor relations, quality management and project life-cycle activities.

Also listed under: MG 8253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8713 Construction and the Law**

3 Credits Construction industry executives need not be legal experts, but they must be aware of the legal issues affecting their industry and their bottom line. This course uses the case study method to lead students through the concepts of design and construction law. The course focuses on the interface of legal, business and technical issues and their resolution. It includes the design and organization of construction documents; the legal aspects of bidding, subcontracting, bonds, insurance, mechanic’s liens, etc; and the implication of delays, changes and charged conditions. Alternative dispute resolution (ADR) methods are introduced.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CE 8723 How to Succeed in Construction**

3 Credits This course leads students through the how-to’s of running a successful, large, complex construction company. It analyzes how the industry actually works, including contractual relationships with clients in all types of projects from design/build to privatization. It covers the business fundamentals of running a construction company, including issues such as surety and insurance: various types of construction organizations, domestic and international; and company culture – inner-workings of a business that can mean the differences between success and failure.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

* Course is part of the Exec 21 program; special requirements (see Construction Management Program) or permission of adviser required.

Approved Technical Electives in Construction:

**CE 8273 Contracts and Specifications**

3 Credits This course covers principles of contract law as applied to the construction industry and legal problems in preparing and administering construction contracts.

Also listed under: MG 8273.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 8783 Construction Management and Planning

3 Credits Strategic planning is indispensable to achieving superior management. This course in business planning provides practical advice for organizing the planning system, acquiring and using information and translating strategic plans into decisive action. This knowledge is an invaluable resource for top and middle-level executives.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8703 Managing and Leading in the 21st Century

3 Credits Today’s mega projects require the formation of large multidisciplinary teams including engineers, constructors and financial, legal and business experts. Success in this challenging environment requires up-to-date and proven leadership and management skills. This course covers the basic components of management planning, organizing, directing, controlling and decision-making. It defines the engineering and construction team and discusses leadership styles. This course also addresses the management of change, external factors that shape decisions, the development of personal leadership abilities and, ultimately, 21st century leadership requirements.

Prerequisite(s): Admission to the Exec 21 Program or permission of a Construction Management Program Director.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Additional electives may be approved by the adviser.

* Course is part of the Exec 21 program; special requirements (see Construction Management Program) or permission of adviser required.

Minor in Environmental Systems Management

Credits required in the minor:

CE 7753 Environmental Systems Management

3 Credits This course provides an overview of information technologies as applied to the remote sensing of environmental infrastructure systems, and includes the development of infrastructure system databases to assist complex decision-making on environmental infrastructures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7533 Hazardous/Toxic Waste Management

3 Credits This course looks at methods in the management of hazardous/toxic waste sites. Topics covered include health and safety, legal aspects, contamination of the environment, treatment processes and toxicology and risk assessment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CE 7563 Environmental Law

3 Credits This course presents legal principles and issues relating to environmental law. Historical perspectives and case laws will be considered. Topics include the Clean Water Act, nonpoint sources and water quality laws, the Clean Air Act and its amendments, the National Ambient Air Quality Standards and the National Environmental Policy Act. The above legislation and its impact on policy and technology also will be considered.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Approved Technical Electives in Environmental Studies:

CE 7473 Analysis of Stream and Estuary Pollution

3 Credits This course covers dispersal and decay of contaminants introduced into lakes, streams, estuaries and oceans, and the effects of pollutants on chemical quality and ecology of receiving waters.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7523 Air Pollution

3 Credits This course discussed the causes and effects of air pollution, methods of sampling, interpretation of data, meteorological aspects and methods of air-pollution control.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 7543 Site Remediation

3 Credits This course covers: treatment and disposal technologies for hazardous waste site remediation; in-situ and ex-situ processes; physicochemical processes, stabilization and solidification; biological processes, including aerobic and anaerobic systems for degradation and detoxification; thermal processes and incineration; and storage, land disposal and containment. Remediation planning and technology selection for hazardous waste containment and clean up for typical case studies are examined. The study of decision-making and technology selection is a key course component.

Prerequisite(s): CE 3153 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Additional electives may be approved by the adviser.

Minor in Civil Infrastructure Systems Management

Credits required in the minor:
CE 7863 Infrastructure Monitoring and Performance Assessment

3 Credits This course introduces the physical nature of infrastructure materials and systems. The concept of performance is introduced from the viewpoint of strength and durability. Lectures and laboratory demonstrations identify the mechanisms of degradation and cover techniques for condition assessment and quality assurance.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 6063 Bridge Engineering

3 Credits This course covers types of bridges; geometric design of bridges; construction materials and techniques; simplified bridge analysis; special problems in the design of steel and reinforced-concrete bridges; bridge inspection policies; bridge rehabilitation procedures; bridge management systems; and the effects of wind and earthquakes on long-span bridges.

Prerequisite(s): Undergraduate structural analysis and steel design.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8433 Urban Geotechnology

3 Credits This course looks at case histories on geotechnical design, construction and rehabilitation in the urban environment. Topics covered: Special construction problems and innovative solutions; unforeseen ground conditions performance monitoring; remedial planning and implementation; and geotechnical design and construction issues from a practicing engineer’s perspective.

Prerequisite(s): CE 3153 and CE 4173 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Approved Technical Electives in Infrastructure Systems:

CE 6143 Steel Structures

3 Credits This course explores compression members; elastic and inelastic buckling of columns and plates; lateral support of beams; torsion of open and closed sections; warping; lateral torsional buckling of beams; and bi-axial bending. Other topics include: Plate girders, including stability of webs and flanges; combined bending and axial load; instability analysis; and design of rigid and semi-rigid mechanisms of continuous beams and rigid frames. Both elastic and plastic design criteria are discussed.

Prerequisite(s): CE 3143 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8433 Urban Geotechnology

3 Credits This course looks at case histories on geotechnical design, construction and rehabilitation in the urban environment. Topics covered: Special construction problems and innovative solutions; unforeseen ground conditions performance monitoring; remedial planning and implementation; and geotechnical design and construction issues from a practicing engineer’s perspective.
Prerequisite(s): CE 3153 and CE 4173 or equivalents.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8493 Environmental Geotechnology

3 Credits This course covers: Clay mineralogy; soil water interaction processes; chemical transport through soils; hydraulic conductivity, diffusion and attenuation mechanisms; water-disposal systems; design of land-fills, seepage barriers and cut-off walls; geo-environmental site characterization techniques; and soil remediation techniques.

Prerequisite(s): CE 3153 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Additional electives may be approved by the adviser.

Capstone Experience

Students fulfill the requirement for a meaningful Capstone experience by completing an independent case study in urban systems management and engineering (3 credits) or a master’s thesis on a topic of independent study (6 credits).

All course descriptions for Urban Systems Engineering and Management are found in the Civil Engineering section of this catalog.

Department of Computer Science and Engineering

Head: Keith Ross

Mission Statement

The Department of Computer Science and Engineering is committed to preparing undergraduate and graduate students for leadership roles in professional and research activities in the information-technology sector. The department fosters an environment that encourages lifelong learning in the Information Age. Graduates lead and grow in diverse working environments and apply the theories and skills of computer and information science to real-world problems. Toward this end, the department conducts state-of-the-art research in theoretical and applied computer science and maintains strong educational programs that emphasize breadth and depth in technical knowledge and proficiency in spoken and written communication skills. The environment encourages Invention, Innovation and Entrepreneurship (i^2e).

The Department

Computers are now used in practically every area of human endeavor and are radically changing both the way people live and how they view the limits of human capabilities. Job opportunities in computer science and engineering are challenging and diverse. According to the U.S. Bureau of Labor Statistics, current job growth in computer science is among the highest of any technical profession.

NYU-Poly’s Department of Computer Science and Engineering offers programs leading to the BS, MS and PhD in Computer Science, and the MS in Information Systems Engineering and Cyber Security. The department offers joint programs with the
Department of Electrical and Computer Engineering, leading to the BS and MS in Computer Engineering and the MS in Telecommunication Networks. The department also offers an advanced certificate in software engineering and cyber security.

The Department of Computer Science and Engineering is active in research in several key areas of computer science. The department’s research strengths are in these areas: Internet and Web research, which includes peer-to-peer networking; cloud services and networking; Web search, Web mining and social networks; multi-player games and online virtual worlds. Cyber security is one of the most important areas of computer science and engineering at NYU-Poly. Cyber security includes vulnerability analysis; peer-to-peer security; multimedia forensics; biometrics; watermarking and digital rights management; wireless security; steganography; fault-tolerant distributed cryptography; and usable security; graphics, visualization. Vision and image processing has revolutionized the world of technology. It includes computer graphics and visualization; computer vision; and image processing. Lastly, theoretical computer science includes data structures; computational geometry; computational learning theory and combinatorial optimization and approximation algorithms.

The faculty works closely with NYUPoly’s Center for Advanced Technology in Telecommunications (CATT) and has relationships with industries that support research and activity in their special interests.

NYU-Poly has been designated as a Center of Excellence for Information Assurance Education for research by the National Security Agency (NSA) and operates the Scholarship for Service Program (SFS) in Information Assurance.

The department provides students with a wide variety of advanced computer and software systems. These support PC and UNIX technology along with highly distributed networks. The department has four dedicated computer-science laboratories (virtual lab) for upper-level undergraduate students. They are the Software Engineering Laboratory, Parallel and Distributed Systems Laboratory, Visualization and Graphics Laboratory and Computer System and Security Integration Laboratory. Multimedia and Web-based laboratories are also available.

**Degrees Offered**

**Bachelor of Science**

- Computer Engineering, B.S.*
- Computer Science

**Master of Science**

- Computer Science
- Cyber Security
- Information Systems Engineering

**Doctor of Philosophy**

- Computer Science

**Graduate Certificates**

- Cyber Security
• Information Security Professional
• Information Systems Administration
• Software Engineering

*Offered in conjunction with the Department of Electrical and Computer Engineering.

Undergraduate Programs

For undergraduates, the department offers two degrees: a Bachelor of Science in Computer Science (BS CS) and a Bachelor of Science in Computer Engineering (BS CompE). The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects, such as object-oriented programming, computer architecture and operating systems, but also provides a number of exciting avenues for specialization including computer and online game development, cyber security, Internet/web systems and applications, bioinformatics, graphics and vision, digital media and management and entrepreneurship. Strong students can also apply to the BS/MS Program where it’s possible to earn the BS and MS in computer science at the same time.

The department jointly administers the Bachelor of Science in Computer Engineering with the Department of Electrical and Computer Engineering. It draws on the two departments’ strengths to provide a focus on computer system design with integrated understanding of computer hardware and software.

Master's Programs

The MS in Computer Science permits students to take courses either on a full-time or part-time basis. The curriculum has been designed for maximum flexibility. It includes fundamental courses in computer science as well as electives in specialized advanced courses on topics including computer and network security, distributed systems and networking, computer graphics, databases and web search technology. By electing the masters-thesis option, students may also pursue research with faculty members who are internationally recognized in their fields.

The MS in Cybersecurity is a new and highly innovative program that provides students with the critical knowledge and skills to become experts in cybersecurity, the science of protecting vital computer networks and electronic infrastructures from attacks. The program responds to the growing demand for security specialists in industry as well as government organizations. The department also offers MS degrees in Information Systems Engineering and System Integration.

PhD Program

The PhD program develops graduate skills in a broad range of areas as well as expertise in one or more specific areas and the ability to think critically and conduct independent research. Outstanding PhD students are advised to apply for financial aid in the form of teaching assistantships, research assistantships or partial-tuition remission.

MS in Information Systems Engineering

The information systems engineering program educates industry people facing the challenges and opportunities of integrating computers and communication systems. The program combines courses from electrical engineering, computer science and management; the emphasis is on information systems engineering. Polytechnic offers this program only at its Westchester campus, where courses are in executive format and classes meet every other weekend for two full days, Friday and Saturday.

Software Engineering Certificate
The advanced certificate in software engineering comprises a series of five graduate-level courses to give students the knowledge and skills needed to compete successfully in the software-development arena. Students who want to continue their studies can apply these courses to the MS program in computer science.

**Cyber Security Certificate**

The graduate certificate allows technical professionals to obtain key bodies of knowledge and specialization in cyber security. Students acquire an understanding of various technologies in emerging areas of security such as computer and network security, digital forensics, cryptography and biometrics. Students who want to continue their studies can apply all courses taken toward the MS program in computer science.

**Faculty**

**Professors**

**Boris Aronov**, Professor of Computer Science and Graduate Director  
PhD, Courant Institute of Mathematical Sciences, New York University  
*Algorithms, computational and combinatorial geometry*

**Phyllis G. Frankl**, Professor of Computer Science  
PhD, New York University  
*Software analysis and testing*

**K. Ming Leung**, Professor of Computer Science  
PhD, University of Wisconsin  
*Scientific computing, computer simulation, neural networks*

**Nasir Memon**, Professor of Computer Science  
PhD, University of Nebraska  
*Data compression, image and video processing, computer security, multimedia computation and communication*

**Keith W. Ross**, Department Head and Leonard J. Shustek Distinguished Professor of Computer Science  
PhD, University of Michigan  
*Computer networking, Internet research, multimedia networking, scholastic modeling*

**Associate Professors**

**Yi-Jen Chiang**, Associate Professor of Computer Science  
PhD, Brown University  
*Computer graphics: out-of-core scientific visualization, isosurface extraction, surface simplification, virtual reality, air traffic control. Computer algorithms: I/O algorithms, computational geometry, graph algorithms, approximation algorithms, data structures*

**Lisa Hellerstein**, Associate Professor of Computer Science  
PhD, University of California at Berkeley  
*Computational learning theory, machine learning, algorithms, complexity theory, discrete mathematics*

**John Iacono**, Associate Professor of Computer Science  
PhD, Rutgers–The State University of New Jersey  
*Computational geometry, data structures, algorithms*
Katherine Isbister, Associate Professor of Digital Media and Computer Science and Engineering  
PhD, Stanford University  
Social psychological and affective approaches to human computer interface, with special attention to games and other leisure and social technologies; embodied conversational agents and computer game characters

Torsten Suel, Associate Professor of Computer Science  
PhD, University of Texas at Austin  
Design and analysis of algorithms, database systems, parallel computation, experimental algorithmics

Joel Wein, Associate Professor of Computer Science  
PhD, Massachusetts Institute of Technology  
Scheduling, parallel and distributed computing, combinatorial optimization, data mining, algorithms

Edward K. Wong, Associate Professor of Computer Science  
PhD, Purdue University  
Computer vision, image analysis, pattern recognition, computer graphics

Nitesh Saxena, Assistant Professor of Computer Science  
PhD, University of California, Irvine  
Computer and network security, applied cryptography

Industry Faculty

Robert J. Flynn, Industry Professor and Director of CSE Programs—Westchester Graduate Center  
PhD, Polytechnic Institute of New York  
Computer architecture, operating systems

Haldun Hadimioglu, Industry Professor of Computer Science  
PhD, Polytechnic University  
Computer architecture, parallel processing, reconfigurable systems and application specific processors

Stuart A. Steele, Associate Department Head of Computer Science and Engineering and Industry Professor  
PhD, Pennsylvania State University  
Software engineering and management, programming languages

John B. Sterling, Industry Associate Professor  
MS, New York University  
Game programming, software development

Fred J. Strauss, Industry Associate Professor and Director of CSE programs in Melville Campus—Long Island  
MS, Polytechnic Institute of New York  
Software engineering, project management, distributed systems

Research Faculty

Gad M. Landau, Research Professor of Computer Science  
PhD, Tel-Aviv University (Israel)  
Serial and parallel algorithms for problems related to strings, computation biology, pattern recognition, communication networks

Instructors
Evan Gallagher, Instructor of Computer Science
MS, New York University

Daniel Katz-Braunschweig, Instructor of Computer Science
MS, Iona College

Faculty Emeriti

Henry Ruston, Professor Emeritus of Electrical Engineering and Computer Science
PhD, University of Michigan

Martin L. Shooman, Professor Emeritus of Electrical Engineering and Computer Science
DEE, Polytechnic Institute of Brooklyn

Richard Van Slyke, Professor Emeritus of Electrical Engineering and Computer Science
PhD, University of California at Berkeley

Combinatorial optimization especially applied to telecommunications systems, distributed optimization

Computer Science

Program Director: Keith Ross

Computer science examines the theory and practice of designing, building and using computers. The field includes the design and analysis of algorithms, principles of programming languages and compilers, operating systems, software engineering, artificial intelligence, computer organization and architecture, computational geometry, database systems, parallel and distributed computing, and image analysis and understanding. The Computer Science Program is administered by the Department of Computer Science and Engineering.

Elective Offerings

The following table lists electives offered by the Computer Science and Engineering department. They consist of undergraduate courses as well as graduate courses open to undergraduates.

Undergraduate Courses

- CS 205 Assembly Language and Systems Programming 3 Credits
- CS 239 UNIX System Programming 3 Credits
- CS 308 Introduction to Databases 3 Credits
- CS 391 Java and Web Design 3 Credits
- CS 392 Computer Security 3 Credits
- CS 393 Network Security 3 Credits
- CS 394 Special Topics in Computer Science Credits
- CS 2204 Digital Logic and State Machine Design 4 Credits
- CS 3254 Introduction to Parallel and Distributed Systems 4 Credits
- CS 3714 Secure Information Systems Engineering I 4 Credits
- CS 3734 Scientific and Engineering Computing I 4 Credits
- CS 4724 Secure Information Systems Engineering II 4 Credits
- CS 4744 Scientific and Engineering Computing II 4 Credits
Graduate Courses

To enroll in graduate courses juniors and seniors must have a 3.0 GPA or better and adviser approval.

(open to undergraduates)

- CS 6093 Advanced Database Systems 3 Credits
- CS 6913 Web Search Engines 3 Credits
- CS 6273 Performance Evaluation of Computer Systems 3 Credits
- CS 6533 Interactive Computer Graphics 3 Credits
- CS 6613 Artificial Intelligence I 3 Credits
- CS 6643 Computer Vision and Scene Analysis 3 Credits
- CS 6673 Neural Network Computing 3 Credits
- CS 6843 Computer Networking 3 Credits
- CS 9013 Selected Topics in Computer Science 3 Credits
- CS 9023 Web Technologies and Integrated Environments 3 Credits
- CS 9033 Web Services and SOA 3 Credits
- CS 9043 Cryptography with Financial Applications 3 Credits
- CS 9053 Introduction to Java 3 Credits
- CS 9073 Human Computer Interaction 3 Credits
- CS 9093 Biometrics 3 Credits
- CS 9103 Object Oriented Design in Java 3 Credits
- CS 6923 Machine Learning 3 Credits
- CS 9153 Game Programming 3 Credits
- CS 9163 Application Security 3 Credits
- CS 9963 Advanced Project in Computer Science 3 Credits
- EL 5143 Multimedia Laboratory 3 Credits
- EL 5473 Introduction to VLSI System Design 3 Credits

Transfer Students

Transfer students are accepted into the undergraduate Computer Science Program on the same basis described in the admissions section of this catalog. In addition, the department requires that at least 28 credits in computer science, as well as CS 3513 and CS 4523, be completed at NYU-Poly. Graduates of technology programs may be able to fulfill the requirements for the BS in Computer Science in two to three and one-half years, depending on the scope and level of their previous education. Students should consult an undergraduate adviser for details.

Courses taken at other schools may be granted transfer credit after an evaluation of the content and level of material covered. Periodic re-evaluation of courses taken at other institutions may lead to a variation in the number of credits granted year to year. Thus, students completing the same program, but in different years, may receive different numbers of transfer credit. Students should consult a computer science undergraduate adviser for current information. All computer science courses are evaluated by the Department of Computer Science and Engineering. Transfer students exempted from EG 1003 Introduction to Engineering and Design, must take a substitute course that includes the preparation of presentations. Students should meet with their undergraduate adviser for more information.
Departmental Standards, Probation and Grades of I (Incomplete)

To remain in good academic standing, computer-science majors must satisfy the requirements listed below in addition to maintaining a minimum cumulative GPA of 2.0 in all courses.

The following requirements apply to all undergraduate computer science students:

1. Students must maintain an average of C (2.0 GPA) or better in CS.
2. Students must earn a grade of C- or better in the following courses: Calculus I (MA 1024); Calculus II (MA 1124); Introduction to Programming and Problem Solving (CS 1114); Object Oriented Programming (CS 1124); and Data Structures and Algorithms (CS 2134).
3. Students may repeat a course in which they earned a substandard grade, but no CS course may be taken more than three times (grades of W and AUDIT are not counted for the purpose of this rule).
4. A course in which the student received an incomplete (I) grade may not be used to satisfy any prerequisites until the incomplete is resolved. See “Policies on Undergraduate Grading and Grades” in the “Academic Policies and Degree Requirements” section of this catalog for additional information on incomplete grades.

Students failing to meet any of the above requirements are placed on departmental probation as a warning that they are not progressing acceptably toward their degree. Repeated failure to meet probation requirements may lead to disqualification from the undergraduate computer science program and courses.

Information

For more information related to curriculum and prerequisite changes, new courses, special sections and other last minute announcements go to the Computer Science and Engineering’s website.

Graduate Programs Goals and Objectives

MS in Computer Science

The goals and objectives of the Master of Science in Computer Science program are to provide students with the following:

- Maximum curriculum flexibility, allowing students to adapt their program to their ambitions and goals as well as to their educational and professional backgrounds;
- A solid grounding in computer-science fundamentals;
- Professional-level courses in computer science;
- Opportunity to specialize in selected technology areas of utmost interest; and
- Opportunities for a research-oriented program, in preparation for the PhD program in computer science.

Requirements for MS in Computer Science

Entrance Requirements

For entrance into the Master of Science degree programs, students are required to have an undergraduate degree in computer science, mathematics, science or engineering, with a superior undergraduate record from an accredited institution. Applicants with degrees in other fields are considered individually for admission. Generally, entering students are expected to know mathematics through calculus.

Additional Entrance Requirements

1. At least one year of university-level science.
2. A working knowledge of a high-level, general-purpose programming language (preferably C++).

3. A basic understanding of computer fundamentals such as computer organization and operation, data structures and computer architecture. Students entering with a bachelor’s in computer science or with a bachelor’s in a technical area and a strong minor in computer science should be able to satisfy entrance requirements for the master’s degree program. Students who have superior academic credentials but who lack sufficient background are admitted with conditional status, pending satisfactory completion of several individually specified preparatory courses. In some cases, such students are interviewed to determine the preparatory courses they need to complete. Successful completion of the preparatory courses with a B or better average grade is a necessary condition for transfer to regular status. The demonstrated ability to communicate in written and spoken English is essential for success in pursuing graduate studies in computer science and information-systems engineering; such fluency is required for regular status. Foreign students and others for whom English is a second language may be required to undertake preparatory work to improve their language skills. Admission with advanced standing is accepted in accordance with NYU-Poly regulations published in the catalog. A maximum of 9 credits may be applied to the MS degree from previous graduate work at an acceptable institution.

Preparatory Courses
The Department of Computer Science and Engineering offers two preparatory bridge courses for students without a working knowledge of a high-level, general-purpose programming language:

- CS 5303 Introduction to Programming and Problem Solving
- CS 5403 Data Structures and Algorithms

Master’s Thesis
Exceptional students may elect to write a master’s thesis, for which no more than 6 credits may be earned toward the degree. Such students should find an adviser who agrees to monitor the thesis research. Such research need not be original, but should demonstrate adequately the student’s proficiency in the subject. An oral defense of the master’s thesis before at least three professors is required.

PhD Program in Computer Science
Graduate students who exhibit a high degree of scholastic proficiency and demonstrate an ability for independent scholarship may consider extending their goals toward the degree of Doctor of Philosophy.

Minor

Computer Science Minor
The minor in Computer Science consists of a minimum of 15 credits including CS 1124 and CS 2134. Students would need to obtain a grade of C- or better in *CS 1114 (Intro. to Programming and Problem Solving) and satisfy the pre-requisite requirements before enrolling in these courses. Students must maintain an average of 2.0 or better in the entire minor. In addition, a required CS course in a BS curriculum cannot be used to satisfy the course requirements in the CS minor. For transfer students, at least three of the five courses must be taken at NYU-Poly.

For more information about the minor contact the academic adviser.

Note: *CS 1114 is a prerequisite for CS 1124 therefore it does not count towards the minor.

Bachelors
Computer Science, Algorithms and Theory Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government, and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects such as object-oriented programming, computer architecture, and operating systems—but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:
• Provide a deep understanding of fundamental computer science subjects;
• Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
• Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
• Supplement technical skills with courses in humanities, social science, and business; and
• Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.
**Prerequisite(s):** CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 2134 Data Structures and Algorithms**

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 2214 Computer Architecture and Organization**

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

**CS 3224 Operating Systems**

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3413 Design and Analysis of Algorithms**

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3513 Software Engineering I**
3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses
EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.
PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.

Note: Satisfies a humanities and social sciences elective.

Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Algorithms and Theory

MA 4423 Introductory Numerical Analysis

Prerequisite(s): MA 2132 and some experience in computer programming.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6753 Theory of Computation

3 Credits This course introduces the theory of computation. Topics: Formal languages and automata theory. Deterministic and non-deterministic finite automata, regular expressions, regular languages, context-free languages. Pumping theorems for regular and context-free languages. Turing machines, recognizable and decidable languages. Limits of computability: the Halting Problem, undecidable and unrecognizable languages, reductions to prove undecidability. Time complexity, P and NP, Cook-Levin theorem, NP completeness.
Prerequisite(s): Graduate status and CS 6003 or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6703 Computational Geometry

3 Credits This course introduces data structures and algorithms for geometric data. Topics include intersection, polygon triangulation, linear programming, orthogonal range searching, point location, Voronoi diagrams, Delaunay triangulations, arrangements and duality, geometric data structures, convex hulls, binary space partitions, robot motion planning, quadtrees, visibility graphs, simplex range searching.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6903 Modern Cryptography

3 Credits This course examines modern cryptography from a theoretical perspective, with an emphasis on “provable security.” The course looks particularly at cryptographic primitives that are the building blocks of various cryptographic applications. The course studies notions of security for a given cryptographic primitive, its various constructions and respective security analysis based on the security notion. The cryptographic primitives covered include pseudorandom functions, symmetric encryption (block ciphers), hash functions and random oracles, message authentication code, asymmetric encryption and digital signatures. Time permitting, the course covers how to build secure cryptographic protocols for authenticated key exchange, using the primitives studied. Also covered: various number-theoretic assumptions upon which cryptography is based.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data
members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

- Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms
4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.
Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.
Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits

Spring Semester: 15 Credits

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.
Prerequisite(s): CS 3513.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.

Computer Science, Artificial Intelligence Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology
powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects—such as object-oriented programming, computer architecture, and operating systems—but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

**Once You Have the Degree**

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

**Goals and Objectives**

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

**Curriculum Overview**
The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

**CS 1122 Computer Science and Engineering**

2 Credits This is a breadth-first course that introduces computer-sciene majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1124 Object Oriented Programming**

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 2134 Data Structures and Algorithms**

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.
Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top-down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II
3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914.
Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II
2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0 and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.

Note: Satisfies a humanities and social sciences elective.
Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Artificial Intelligence

CS 6613 Artificial Intelligence I

3 Credits Artificial Intelligence (AI) is an important topic in computer science and offers many diversified applications. It addresses one of the ultimate puzzles humans are trying to solve: How is it possible for a slow, tiny brain, whether biological or electronic, to perceive, understand, predict and manipulate a world far larger and more complicated than itself? And how do people create a machine (or computer) with those properties? to that end, AI researchers try to understand how seeing, learning, remembering and reasoning can, or should, be done. This course introduces students to the many AI concepts and techniques.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6923 Machine Learning

3 Credits This course introduces the field of machine learning and covers standard machine-learning techniques, such as decision trees, nearest neighbor, Bayesian methods, support vector machines and logistic regression. Topics: Basic concepts in computational learning theory including the PAC model and VC dimension. Methods for evaluating and comparing machine learning techniques.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6673 Neural Network Computing

3 Credits This course introduces neural network models and their applications. Topics: Discussion of organization and learning in neural network models including perceptrons, adalines, backpropagation networks, recurrent networks, adaptive resonance theory and the neocognitron. Implementations in general and special purpose hardware, both analog and digital. Application in various areas with comparisons to nonneural approaches. Decision systems, nonlinear control, speech processing and vision.

Prerequisite(s): Graduate status and CS 5403; some familiarity with matrix notation and partial derivatives is recommended.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

*Corequisite(s): EG 1 Examination Hour*

*Note: Weekly laboratory required.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima,
optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s):* Placement exam or MA 912 or MA 914. *Corequisite(s):* EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Spring Semester: 16 Credits**

**CS 1124 Object Oriented Programming**

*4 Credits* This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

*Prerequisite(s):* CS 1114 (C- or better). *Corequisite(s):* EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1122 Computer Science and Engineering**

*2 Credits* This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**

*4 Credits* This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s):* MA 1024 or MA 1324. *Corequisite(s):* EG 1 Examination Hour
*Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.*
EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.
- Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology
This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

**CS 2214 Computer Architecture and Organization**

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

**MA 2212 Data Analysis I**

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2222 Data Analysis II**

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year
Fall Semester: 18 Credits

**CS 3224 Operating Systems**

*4 Credits* This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

*Prerequisite(s):* CS 2214 and CS 2134 (C- or better).

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3513 Software Engineering I**

*3 Credits* This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

*Prerequisite(s):* CS 2134 (C- or better), CS 3224 and senior status.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

*Prerequisite(s):* MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective *3 Credits*  
- Elective *3 Credits*  
- Elective *3 Credits*

Spring Semester: 15 Credits

**CS 3413 Design and Analysis of Algorithms**

*3 Credits* This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

*Prerequisite(s):* CS 2134 (C- or better) and MA 2312/MA 2322.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Senior Year

Fall Semester: 15 Credits

**CS 4523 Design Project II**

*3 Credits* This is the second course in a two-course design-project sequence (DP I and DP II). Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

*Prerequisite(s):* CS 3513.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).
Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.

At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.

**Computer Science, Computer Hardware and Embedded Systems Concentration, B.S.**

**Undergraduate Program**

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects — such as object-oriented programming, computer architecture, and operating systems — but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.
Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.
CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms
3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3513 Software Engineering I**

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 4523 Design Project II**

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II). Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Required Mathematics Courses**

**MA 1024 Calculus I**

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**
4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I
2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the
development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s): EW 1013.*

**PL 2143 Ethics and Technology**

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

*Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.*

*Note: Satisfies a humanities and social sciences elective.*

**Electives**

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

**Concentration Areas**

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

**Computer Hardware and Embedded Systems**

**CS 2204 Digital Logic and State Machine Design**

4 Credits This course covers combinational and sequential digital circuits. Topics: Introduction to digital systems. Number systems and binary arithmetic. Switching algebra and logic design. Error detection and correction. Combinational integrated circuits, including adders. Timing hazards. Sequential circuits, flip-flops, state diagrams and synchronous machine synthesis. Programmable Logic Devices, PLA, PAL and FPGA. Finite-state machine design. Memory elements. Weekly laboratory experiments introduce digital system design on FPGAs. A grade of C- or better is required of undergraduate computer-engineering majors.
**Prerequisite(s):** CS 1114 (C- or better) or CS 1133 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 205 Assembly Language and Systems Programming**

*3 Credits* This course covers internal representation of numeric and character data. Topics: Machine organization and machine language programming. Assembly language, assemblers. Assembly language programming: branching, arrays, lists, arithmetic and bit manipulation, macros, stacks, subroutines, parameter passing, recursion. Linking and loading, position independent and reentrant code. Traps and interrupts.

**Prerequisite(s):** CS 2134 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5493 Advanced Hardware Design**

*3 Credits* This course shows how a hardware-description language (for example, VHDL) can be used for computer hardware modeling, logic synthesis, register-level synthesis and simulation. The resulting design with hundreds or thousands of gates is then ready to be downloaded to form FPGA chips or silicon cells. Programs used: QuickVHDL, modeling and simulation tools from Mentor Graphics or similar large-scale programs. A design project is required and students make a written and oral presentation.

**Prerequisite(s):** Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5483 Real Time Embedded Systems**

*3 Credits* This course provides an overview of the unique concepts and techniques needed to design and implement computer systems having real-time response requirements in an embedded environment. It contrasts the concepts and techniques of real time and embedded systems with those of more traditional computer systems. Topics include: Basic concepts of real time and embedded systems, hardware features, programming languages, real time operating systems, synchronization techniques, performance optimization and current trends in real time and embedded systems such as incorporating internet connectivity.

**Prerequisite(s):** Knowledge of C, Pascal or other programming language and a basic understanding of computer architecture.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Typical Course of Study for the Bachelor of Science in Computer Science**

**Freshman Year**

**Fall Semester: 15 Credits**

**CS 1114 Introduction to Programming and Problem Solving**
This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EG 1001 Engineering and Technology Forum

In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. - CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the
CS elective must be a project course. A list of concentration areas and project courses are available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and
Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx
level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to
take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted
for CS electives. A list of approved substitutions is available in the CSE department.

Computer Science, Cyber Security Concentration, B.S.
Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day—from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects—such as object-oriented programming, computer architecture, and operating systems—but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

**Curriculum Overview**

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as interdisciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

**Required Computer Science Courses**

**CS 1122 Computer Science and Engineering**

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

*Note: Weekly laboratory required.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1124 Object Oriented Programming**

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.
Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.
Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging
and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Science Requirement**

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

**Humanities and Social Sciences Requirement**

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

**EW 1013 Writing the Essay**

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s):* EW 1013.

**PL 2143 Ethics and Technology**

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially.
and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Cyber Security

**CS 392 Computer Security**

3 Credits This course covers cryptographic systems. Topics: Capability and access control mechanisms, authentication models, protection models. Database and operating system security issues, mobile code, security kernels. Malicious code, Trojan horses and computer viruses. Security policy formation and enforcement, legal aspects and ethical aspects.

Prerequisite(s): CS 2214 and MA 2312. Corequisite(s): CS 3224.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6843 Computer Networking**

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 393 Network Security**
3 Credits This course covers reviews networking. Topics: Basic notations of confidentiality, integrity, availability; cryptographic systems, coding and decoding messages. Cryptographic protocols for privacy, integrity, key exchange and access control. TCP/IP security; Firewalls, IPSec; secure ecommerce. Intrusion detection, prevention, response. Advanced topics are included.

Prerequisite(s): CS 3224 and CS 6843, or EE 136, EL 5363 or EL 5373.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6803 Information Systems Security Engineering and Management

3 Credits This course presents a system and management view of information security: what it is, what drives the requirements for information security, how to integrate it into the systems-design process and life-cycle security management of information systems. A second goal is to cover basic federal policies on government information security and methodologies. Topics include information-security risk management, security policies, security in the systems-engineering process, laws related to information security and management of operational systems.

Prerequisite(s): Graduate status and CS 392 or equivalent.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations,
inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
CS 1122 Computer Science and Engineering

2 Credits  This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits  This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s):  MA 1024 or MA 1324. Corequisite(s):  EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits  This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s):  EW 1013.

•  Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms

4 Credits  This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s):  CS 1124 (C- or better) and MA 1024. Corequisite(s):  MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.

Computer Science, Data Management and Mining Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects — such as object-oriented programming, computer architecture, and operating systems — but also provides a number of exciting avenues for specialization including:
The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.
Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

### Required Computer Science Courses

**CS 1122 Computer Science and Engineering**

2 Credits  This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

4 Credits  This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour  
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1124 Object Oriented Programming**

4 Credits  This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 2134 Data Structures and Algorithms**

4 Credits  This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 2214 Computer Architecture and Organization

4 Credits This course covers is a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or
group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.
**Prerequisite(s): MA 2312.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2212 Data Analysis I**

**Prerequisite(s): MA 1124 or equivalent.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2222 Data Analysis II**

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

**Prerequisite(s): MA 2212.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

**Prerequisite(s): MA 1124 or equivalent.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Required Engineering Courses**

**EG 1001 Engineering and Technology Forum**

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**
3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.

Note: Satisfies a humanities and social sciences elective.

Electives
• 18 additional credits in computer science electives.
• 9 additional credits from mathematics, science, or humanities.
• 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Data Management and Mining

CS 308 Introduction to Databases

3 Credits This course introduces database systems and their approach as a mechanism to model the real world. The course covers data models (relational, object-oriented), physical database design, query languages, query processing and optimization, as well as transaction management techniques. Implementation issues, object oriented and distributed databases also are introduced.

Prerequisite(s): CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6093 Advanced Database Systems

3 Credits Students in this advanced course on database systems and data management are assumed to have a solid background in databases. The course typically covers a selection from the following topics: (1) advanced relational query processing and optimization, (2) OLAP and data warehousing, (3) data mining, (4) stream databases and other emerging database architectures and applications, (5) advanced transaction processing, (6) databases and the Web: text, search and semistructured data, or (7) geographic information systems. Topics are taught based on a reading list of selected research papers. Students work on a course project and may have to present in class.

Prerequisite(s): Graduate status and CS 6083 or equivalent, including experience with a relational database system.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6913 Web Search Engines

3 Credits This course covers the basic technology underlying Web search engines and related tools. The main focus is on large-scale Web search engines (such as Google, Yahoo and MSN Search) and their underlying architectures and techniques. Students learn how search engines work and get hands-on experience in how to build search engines from the ground up. Topics are based on a reading list of recent research papers. Students must work on a course project and may have to present in class.

Prerequisite(s): Good programming skills and graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6923 Machine Learning
3 Credits This course introduces the field of machine learning and covers standard machine-learning techniques, such as decision trees, nearest neighbor, Bayesian methods, support vector machines and logistic regression. Topics: Basic concepts in computational learning theory including the PAC model and VC dimension. Methods for evaluating and comparing machine learning techniques.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the
development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): Placement exam or MA 912 or MA 914.*

*Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

**CS 1124 Object Oriented Programming**

*4 Credits* This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

*Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1122 Computer Science and Engineering**

*2 Credits* This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**
This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour

Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1023 The Advanced College Essay**

This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Science Elective 3 Credits

**Sophomore Year**

**Fall Semester: 17 Credits**

**CS 2134 Data Structures and Algorithms**

This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2312 Discrete Mathematics I**

Prerequisite(s): MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2322 Discrete Mathematics II**

This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.
Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.
Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

**CS 3224 Operating Systems**

*4 Credits* This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

*Prerequisite(s): CS 2214 and CS 2134 (C- or better).*
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3513 Software Engineering I**

*3 Credits* This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

*Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.*
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

*Prerequisite(s): MA 1124 or equivalent.*
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits

Spring Semester: 15 Credits
CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128
Computer Science, Digital Game Design and Development
Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects — such as object-oriented programming, computer architecture, and operating systems — but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is available in the CSE department.
Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as interdisciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.
CS 1114 Introduction to Programming and Problem Solving

This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1124 Object Oriented Programming

This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 2134 Data Structures and Algorithms

This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

This course covers is a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2
CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I
4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and
MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.
Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.

Note: Satisfies a humanities and social sciences elective.

Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Digital Game Design and Development
CS 3113 Game Programming

3 Credits A programming intensive introduction to the creation of computer games. Using mostly two-dimensional sprite-based programming, we examine and experiment with animation, physics, artificial intelligence and audio. In addition, the course explores the mathematics of transformations (both 2D and 3D) and the ways they may be represented.

Prerequisite(s): CS 2134 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3233 Game Development Studio I

3 Credits This class introduces the principles of 2D and 3D computer game design. Students learn about the range of game types and understand their conceptual building blocks. Students complete a structured sequence of assignments towards the design for a new game.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6533 Interactive Computer Graphics

3 Credits This course introduces the fundamentals of computer graphics with hands-on graphics programming experiences. Topics include graphics software and hardware, 2D line segment-scan conversion, 2D and 3D transformations, viewing, clipping, polygon-scan conversion, hidden surface removal, illumination and shading, compositing, texture mapping, ray tracing, radiosity and scientific visualization.

Prerequisite(s): Graduate status and CS 5403 or equivalents and knowledge of C or C++ programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6613 Artificial Intelligence I

3 Credits Artificial Intelligence (AI) is an important topic in computer science and offers many diversified applications. It addresses one of the ultimate puzzles humans are trying to solve: How is it possible for a slow, tiny brain, whether biological or electronic, to perceive, understand, predict and manipulate a world far larger and more complicated than itself? And how do people create a machine (or computer) with those properties? to that end, AI researchers try to understand how seeing, learning, remembering and reasoning can, or should, be done. This course introduces students to the many AI concepts and techniques.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits
CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and
presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.
- Science Elective 3 Credits 4
Sophomore Year

Fall Semester: 17 Credits

**CS 2134 Data Structures and Algorithms**

*4 Credits* This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

*Prerequisite(s):* CS 1124 (C- or better) and MA 1024. *Corequisite(s):* MA 2312/MA 2322.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2312 Discrete Mathematics I**

*2 Credits* This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

*Prerequisite(s):* MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2322 Discrete Mathematics II**

*2 Credits* This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

*Prerequisite(s):* MA 2312.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PL 2143 Ethics and Technology**

*3 Credits* This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

*Prerequisite(s):* EW 1023 or EN 1233W or EN 1203H.

*Note: Satisfies a humanities and social sciences elective.*

- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits
CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS Elective 3 Credits
Science Elective 3 Credits
Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
**CS 3513 Software Engineering I**

*3 Credits* This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

*Prerequisite(s):* CS 2134 (C- or better), CS 3224 and senior status.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

*2 Credits* This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

*Prerequisite(s):* MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective *3 Credits*  
- Elective *3 Credits*  
- Elective *3 Credits*  

---

**Spring Semester: 15 Credits**

**CS 3413 Design and Analysis of Algorithms**

*3 Credits* This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

*Prerequisite(s):* CS 2134 (C- or better) and MA 2312/MA 2322.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective *3 Credits*  
- Elective *3 Credits*

**Senior Year**

**Fall Semester: 15 Credits**
CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits
- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.
2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.
3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.
4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).
5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.
6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.
7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.
8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.
Computer Science, Digital Media and Art Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects — such as object-oriented programming, computer architecture, and operating systems — but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
• Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
• Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
• Supplement technical skills with courses in humanities, social science, and business; and
• Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

**Curriculum Overview**

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

**Required Computer Science Courses**

**CS 1122 Computer Science and Engineering**

*2 Credits* This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1124 Object Oriented Programming**

*4 Credits* This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.
Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

4 Credits This course covers is a top-down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design
techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

**Prerequisite(s):** CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 4523 Design Project II**

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

**Prerequisite(s):** CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Required Mathematics Courses**

**MA 1024 Calculus I**

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** Placement exam or MA 912 or MA 914. **Corequisite(s):** EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** MA 1024 or MA 1324. **Corequisite(s):** EG 1 Examination Hour
*Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.*
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2312 Discrete Mathematics I**
2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum
In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Science Requirement**

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

**Humanities and Social Sciences Requirement**

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

**EW 1013 Writing the Essay**

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

**PL 2143 Ethics and Technology**
This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Digital Media and Art

CS 6533 Interactive Computer Graphics

3 Credits This course introduces the fundamentals of computer graphics with hands-on graphics programming experiences. Topics include graphics software and hardware, 2D line segment-scan conversion, 2D and 3D transformations, viewing, clipping, polygon-scan conversion, hidden surface removal, illumination and shading, compositing, texture mapping, ray tracing, radiosity and scientific visualization.

Prerequisite(s): Graduate status and CS 5403 or equivalents and knowledge of C or C++ programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

DM 1123 Visual Foundation Studio

3 Credits This studio introduces the fundamentals of visual communication design: color, composition, motion and interaction. The primary creation tool will be Processing, a Java-based graphics development tool for nonprogrammers. Once students learn general compositional principles with Processing, they are introduced to video for capturing color, form and motion.

Prerequisite(s): EW 1013 and CS 1213. Corequisite(s): EW 1023.

DM 2193 Web Studio 1

3 Credits Assignments in this web-design project studio are arranged in sequence to enable the production of a website of professional quality in design and production. The studio is for those seriously interested in web design and stresses interactivity, usability and the quality and appropriateness of look and feel. Students are expected to develop content and complete a
professional-quality site.

Prerequisite(s): EW 1013 and EW 1023.

DM 3193 Web Studio 2

3 Credits The assignments in this web-design project studio are arranged sequentially to enable the production of a website of professional-quality design and production. The studio, for those seriously interested in web design, stresses interactivity, usability and the quality and appropriateness of look and feel. Students also are expected to develop content and complete a professional-quality website.

Prerequisite(s): DM 2193.

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.
MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour

Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II
2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
Spring Semester: 15 Credits

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits
Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an advisor into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an advisor into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by "W." In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is available in the CSE department.

Computer Science, Management Information Systems
Concentration, B.S.

Undergraduate Program

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects — such as object-oriented programming, computer architecture, and operating systems — but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than
programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

*Corequisite(s):* EG 1 Examination Hour  
*Note:* Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 1124 Object Oriented Programming**

*4 Credits* This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

*Prerequisite(s):* CS 1114 (C- or better). *Corequisite(s):* EG 1 Examination Hour  
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 2134 Data Structures and Algorithms**

*4 Credits* This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

*Prerequisite(s):* CS 1124 (C- or better) and MA 1024. *Corequisite(s):* MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 2214 Computer Architecture and Organization**

*4 Credits* This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

*Prerequisite(s):* CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2
CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I
This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** Placement exam or MA 912 or MA 914. **Corequisite(s):** EG 1 Examination Hour

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1124 Calculus II**

This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** MA 1024 or MA 1324. **Corequisite(s):** EG 1 Examination Hour

*Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2312 Discrete Mathematics I**

**Prerequisite(s):** MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

**MA 2322 Discrete Mathematics II**

This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

**Prerequisite(s):** MA 2312.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2212 Data Analysis I**

**Prerequisite(s):** MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and
**MA 2222 Data Analysis II**

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Required Engineering Courses**

**EG 1001 Engineering and Technology Forum**

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Science Requirement**

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.
Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s):* EW 1013.

**PL 2143 Ethics and Technology**

*3 Credits* This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and critique technological development.

*Prerequisite(s):* EW 1023 or EN 1233W or EN 1203H.

*Note:* Satisfies a humanities and social sciences elective.

**Electives**

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

**Concentration Areas**

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

**Management Information Systems**
CS 308 Introduction to Databases

3 Credits This course introduces database systems and their approach as a mechanism to model the real world. The course covers data models (relational, object-oriented), physical database design, query languages, query processing and optimization, as well as transaction management techniques. Implementation issues, object oriented and distributed databases also are introduced.

Prerequisite(s): CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 1002 Foundations of Management

2 Credits This course introduces the principles and practices of management. Management is viewed as a system of tasks and activities, including environmental scanning, planning, organizing, leading and controlling. Within each major task, is a series of processes, which show how to do what has to be done. Management is a science and an art; both aspects of management are covered in this course. Major emphasis is on management history, philosophy and the theory and practice of management planning, decision making, organizing, motivating and leading.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 4014 Introduction to E-Business

4 Credits Since its introduction, the Internet has changed how businesses work. In addition to creating new opportunities, the Internet has revolutionized existing businesses and entire industries. This course provides an undergraduate- level introduction to e-business. The main objectives of this course are to (1) provide a hands-on introduction to the emerging area of e-Business, (2) discuss the major business concepts and issues in this domain and (3) develop high-quality content based on team discussion and individual/group research.

Prerequisite(s): MG 3204, MG 3002, MG 3304 and MG 3404.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 2004 Management of Information Technology and Systems

4 Credits This course provides a foundation to understand the role and potential contributions of information technologies and systems in business organizations—what they are, how they affect the organization and its employees, and how they can make
businesses more competitive and efficient. The course focuses on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process reengineering, knowledge management and group-support systems.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

*Corequisite(s):* EG 1 Examination Hour

*Note: Weekly laboratory required.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life–related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.
MA 1024 Calculus I

This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914.
Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of
integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.
- Science Elective 3 Credits

**Sophomore Year**

**Fall Semester: 17 Credits**

**CS 2134 Data Structures and Algorithms**

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2312 Discrete Mathematics I**

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2322 Discrete Mathematics II**

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.
Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 15 Credits

CS 3413 Design and Analysis of Algorithms
3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes
Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.

At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.

**Computer Science, Programming Language Environments Concentration, B.S.**

**Undergraduate Program**

Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day — from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects—such as object-oriented programming, computer architecture, and operating systems—but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer
Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

**Once You Have the Degree**

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

**Goals and Objectives**

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.

**Curriculum Overview**

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

**Required Computer Science Courses**

**CS 1122 Computer Science and Engineering**

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**
This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

**Corequisite(s):** EG 1 Examination Hour

**Note:** Weekly laboratory required.

**Weekly Lecture Hours:** 3 | **Weekly Lab Hours:** 3 | **Weekly Recitation Hours:** 0

---

**CS 1124 Object Oriented Programming**

This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

**Prerequisite(s):** CS 1114 (C- or better).

**Corequisite(s):** EG 1 Examination Hour

**Weekly Lecture Hours:** 3 | **Weekly Lab Hours:** 3 | **Weekly Recitation Hours:** 0

---

**CS 2134 Data Structures and Algorithms**

This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

**Prerequisite(s):** CS 1124 (C- or better) and MA 102.

**Corequisite(s):** MA 2312/MA 2322.

**Weekly Lecture Hours:** 4 | **Weekly Lab Hours:** 0 | **Weekly Recitation Hours:** 0

---

**CS 2214 Computer Architecture and Organization**

This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

**Prerequisite(s):** CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.

**Weekly Lecture Hours:** 3 | **Weekly Lab Hours:** 0 | **Weekly Recitation Hours:** 2

---

**CS 3224 Operating Systems**

This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.
Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.
**MA 1124 Calculus II**

*4 Credits* This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** MA 1024 or MA 1324.

**Corequisite(s):** EG 1 Examination Hour

**Note:** credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

---

**MA 2312 Discrete Mathematics I**

*2 Credits* This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

**Prerequisite(s):** MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

**MA 2322 Discrete Mathematics II**

*2 Credits* This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

**Prerequisite(s):** MA 2312.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

---

**MA 2212 Data Analysis I**

**Prerequisite(s):** MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and

**MA 2222 Data Analysis II**

*2 Credits* This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.
Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Science Requirement

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

Humanities and Social Sciences Requirement

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.
**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s): EW 1013.*

**PL 2143 Ethics and Technology**

*3 Credits* This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

*Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.*

*Note: Satisfies a humanities and social sciences elective.*

**Electives**

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

**Concentration Areas**

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

**Programming Language Environments**

**CS 205 Assembly Language and Systems Programming**

*3 Credits* This course covers internal representation of numeric and character data. Topics: Machine organization and machine language programming. Assembly language, assemblers. Assembly language programming: branching, arrays, lists, arithmetic and bit manipulation, macros, stacks, subroutines, parameter passing, recursion. Linking and loading, position independent and
reenrant code. Traps and interrupts.

Prerequisite(s): CS 2134 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3314 Design and Implementation of Programming Languages

4 Credits This course covers issues underlying the design of high-level programming languages, along with elements of the compiler technology used to translate those languages into executable code. Topics covered include formal description of language syntax, parsing, memory management, attributes of variables and their binding times, control and data abstraction mechanisms and object-oriented language features. The focus is on imperative and object-oriented languages, with brief introduction to functional and logic-programming paradigms. Substantial programming projects are required.

Prerequisite(s): CS 2134 (C- or better) and MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6413 Compiler Design and Construction

3 Credits This course covers compiler organization. Topics: Lexical analysis, syntax analysis, abstract syntax trees, symbol table organization, code generation. Introduction to code optimization techniques.

Prerequisite(s): CS 5403, CS 6133 and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  - CS 9013 Selected Topics in Computer Science 3 Credits

Typical Course of Study for the Bachelor of Science in Computer Science

Freshman Year

Fall Semester: 15 Credits

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0
EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

Spring Semester: 16 Credits

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data
members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.
Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.
Prerequisite(s): EW 1013.

• Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms
4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers is a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.
Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.
**Prerequisite(s):** CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

**Prerequisite(s):** MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits

**Spring Semester: 15 Credits**

**CS 3413 Design and Analysis of Algorithms**

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

**Prerequisite(s):** CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

**Senior Year**

**Fall Semester: 15 Credits**

**CS 4523 Design Project II**

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.
Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is available in the CSE department.

Computer Science, Web Systems and Applications Concentration, B.S.

Undergraduate Program
Computer science focuses on how to design, build, and effectively use the computers and systems that we interact with every day—from the smart phones in our hands to the complex databases in our banks and hospitals. Because computer technology powers the most essential functions of business, industry, government and entertainment, computer scientists have tremendous opportunities for growth and exploration.

The Bachelor of Science in Computer Science is a rigorous program that not only covers fundamental computer science subjects—such as object-oriented programming, computer architecture, and operating systems—but also provides a number of exciting avenues for specialization including:

- Cyber Security
- Digital Game Design and Development
- Computer Hardware
- Web Engineering
- Internet and Computer Networks
- Building Systems Software
- Real-Time and Embedded Systems
- Algorithms and Theory
- Artificial Intelligence
- Computer Graphics and Vision
- Data Management and Mining
- Management Information Systems

The Computer Science BS program is extremely flexible. NYU-Poly also offers a BS/MS Program that enables students to earn both a BS and an MS degree at the same time. For instance, a student can receive a BS in Computer Science and MS in Computer Science, a BS in Computer Engineering and MS in Computer Science, or a BS in Electrical Engineering and MS in Computer Science. Depending on the student’s preparation and objectives, they can complete both degrees in as little as four years. More information on the BS/MS program can be found on the “Undergraduate Academic Requirements and Policies” section of the catalog.

The program provides research labs for specialized study in areas such as cyber-security, a field in which our department has a distinctive strength. In addition, the program’s close ties to our graduate division immerse students in a vibrant, intellectual atmosphere.

Once You Have the Degree

Computer science jobs are challenging and diverse, but they are also plentiful. Once a student graduates, they can explore a number of possible occupations, including applications programmer, database manager, systems administrator, or IT analyst. They will also be ready to pursue advanced studies toward a master’s or doctorate degree.

Goals and Objectives

With the BS program in Computer Science, the department aims to:

- Provide a deep understanding of fundamental computer science subjects;
- Provide avenues of specialization, such as digital games, cyber security, and Internet systems;
- Achieve a proper balance between theoretical study and practical design in order to solve problems effectively;
- Supplement technical skills with courses in humanities, social science, and business; and
- Pursue independent study, as well as directed research, with faculty members who are internationally recognized in their fields.
Curriculum Overview

The Computer Science and Engineering Department has recently modified the BS in Computer Science curriculum. The new curriculum provides both a rigorous education in computer science as well as enormous flexibility, permitting specialization in a myriad of areas as well as inter-disciplinary study with other fields. The incoming class of 2012 and future classes will follow the new curriculum.

Below is an overview of the Computer Science BS curriculum. The full description of the program and its requirements can be obtained from the Computer Science and Engineering Department. A typical course schedule is located at the end of this section.

Required Computer Science Courses

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1124 Object Oriented Programming

4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 2134 Data Structures and Algorithms
4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.
Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Mathematics Courses

MA 1024 Calculus I

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and
MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
and

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Engineering Courses

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students' educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-
related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Science Requirement**

Students may choose any 3 science courses from the courses offered for credit to engineering or natural science majors. For example, a student might choose to take a sequence of three physics courses, three biology courses or three chemistry courses, or they may choose to take introductory courses in physics, chemistry, and biology, or they might choose to take two courses in one science and another course in a different science.

**Humanities and Social Sciences Requirement**

Students are required to take eight courses in humanities and social sciences. Ideally, they will take one humanities or social science course each semester. Three of these courses are specified below; the remaining five courses are electives.

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s):* EW 1013.

**PL 2143 Ethics and Technology**

*3 Credits* This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and critique technological development.
Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Electives

- 18 additional credits in computer science electives.
- 9 additional credits from mathematics, science, or humanities.
- 15 credits of free electives.

Concentration Areas

Students must also choose a concentration area and fulfill its requirements. Specifically, they must use their electives to take three courses from the menu of courses for their chosen concentration.

Web Systems and Applications

**CS 308 Introduction to Databases**

3 Credits This course introduces database systems and their approach as a mechanism to model the real world. The course covers data models (relational, object-oriented), physical database design, query languages, query processing and optimization, as well as transaction management techniques. Implementation issues, object oriented and distributed databases also are introduced.

Prerequisite(s): CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3254 Introduction to Parallel and Distributed Systems**

4 Credits This course offers a solid grounding in the basic issues and techniques of parallel and distributed computing. The material covers the spectrum from theoretical models of parallel and distributed systems to actual programming assignments.

Prerequisite(s): CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**CS 6913 Web Search Engines**

3 Credits This course covers the basic technology underlying Web search engines and related tools. The main focus is on large-scale Web search engines (such as Google, Yahoo and MSN Search) and their underlying architectures and techniques. Students learn how search engines work and get hands-on experience in how to build search engines from the ground up. Topics are based on a reading list of recent research papers. Students must work on a course project and may have to present in class.

Prerequisite(s): Good programming skills and graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6843 Computer Networking**
This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles of reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

**Prerequisite(s):** Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### CS 391 Java and Web Design

3 Credits Programmers familiar with C or C++ learn to develop Java applications and applets. This course teaches the syntax of the Java language, object-oriented programming in Java, creating graphical user interfaces (GUI) using the Java 2 Platform technology event model, Java exceptions, file input/output (I/O) using Java Foundation Class threads and networking.

**Prerequisite(s):** CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS 9013 Selected Topics in Computer Science 3 Credits

### Typical Course of Study for the Bachelor of Science in Computer Science

**Freshman Year**

**Fall Semester: 15 Credits**

### CS 1114 Introduction to Programming and Problem Solving

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

**Corequisite(s):** EG 1 Examination Hour

**Note:** Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

### EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage
intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1013 Writing the Essay**

*3 Credits* This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG Examination Hour*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**Spring Semester: 16 Credits**

**CS 1124 Object Oriented Programming**

*4 Credits* This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.
Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

CS 1122 Computer Science and Engineering

2 Credits This is a breadth-first course that introduces computer-science majors to several subdisciplines in the computer-science field. The course is built around the theme that computer science is the study of algorithms and includes much more than programming. The course introduces hardware, virtual machines, software, applications and social issues in computing.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.
- Science Elective 3 Credits

Sophomore Year

Fall Semester: 17 Credits

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS Elective 3 Credits
- Science Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 18 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 3513 Software Engineering I

3 Credits This course is the first of a two-course sequence of a design project (DP I and DP II). Focusing on software engineering, the course introduces techniques to specify, design, test and document medium and large software systems. Design techniques include information engineering, object orientation and complexity measures. Also covered are testing methods, such as path testing, exhaustive test models and construction of test data. An introduction to software tools and project management techniques is presented. Student projects involve team software development and tracking.

Prerequisite(s): CS 2134 (C- or better), CS 3224 and senior status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2012 Elements of Linear Algebra I
2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits

Spring Semester: 15 Credits

CS 3413 Design and Analysis of Algorithms

3 Credits This course covers fundamental principles of the design and analysis of algorithms. Topics include asymptotic notation, recurrences, randomized algorithms, sorting and selection, balanced binary search trees, augmented data structures, advanced data structures, algorithms on strings, graph algorithms, geometric algorithms, greedy algorithms, dynamic programming and NP completeness.

Prerequisite(s): CS 2134 (C- or better) and MA 2312/MA 2322.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

CS 4523 Design Project II

3 Credits This is the second course in a two-course design-project sequence (DP I and DP II) Students or several students work with a faculty member and/or graduate students on a current topic in computer science. Each term, a project course with a particular theme is offered by the Department of Computer and Information Science. A faculty member assigns individual or group projects. The project course is highly structured and supervised closely by faculty. Students are expected to use the design and project-management skills they learned in CS 3513 Software Engineering. Alternatively, students may work with a faculty member on an individual project of mutual interest. A written report and oral presentation are required.

Prerequisite(s): CS 3513.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits
Spring Semester: 15 Credits

- CS Elective 3 Credits
- CS Elective 3 Credits
- Elective 3 Credits
- Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for graduation: 128

Footnotes

1 Grade of C- or better is required in CS 1114, CS 1124, CS 2134, MA 1024 and MA 1124.

2 Students who are placed by examination or by an adviser into EN 1080W subsequently register for EW 1013.

3 Students who are placed by examination or by an adviser into MA 914 must defer registration for MA 1024.

4 The Science electives may be chosen from any natural sciences (Physics, Biology and Chemistry).

5 Computer Science students must choose a concentration area consisting of three related courses. In addition, at least one of the CS elective must be a project course. A list of concentration areas and project courses are be available from the CSE department.

6 At least one Humanities and Social Sciences elective must be a Writing-intensive course. Writing-intensive Humanities and Social Sciences courses are designated by “W.” In addition, one Humanities and Social Sciences elective must be a 3xxx or 4xxx level. Approved Humanities and Social Sciences electives span three clusters: CAM, STS and SEG. Students are encouraged to take Humanities and Social Sciences electives across clusters and/or disciplines within a cluster.

7 At least 9 credits of electives must be chosen from Math, Science or Humanities and Social Sciences.

8 With approval of the CSE department, certain closely related courses in EE, Math or other related disciplines may be substituted for CS electives. A list of approved substitutions is be available in the CSE department.

Graduate Certificate

Cyber Security Graduate Certificate

The demand for skilled information-security professionals is growing significantly. This graduate certificate allows technical professionals to obtain key knowledge and specializations in cyber security. Students acquire an understanding of various technologies in emerging areas of security, including computer and network security, digital forensics, cryptography and biometrics. Students are able immediately to apply their knowledge to manage the risk of cyber attacks. Courses are developed and taught by NYU-Poly faculty in the Information Systems and Internet Security (ISIS) Laboratory. Those choosing to work toward a master’s degree may, upon admission, apply all certificate courses toward fulfillment of a degree program.

Admission to the certificate program requires a bachelor’s degree in a related preparatory discipline from an institution acceptable to Polytechnic Institute of NYU.
Course Requirements for the Cyber Security Certificate: 15 Credits

Core Courses: 9 Credits

**CS 6803 Information Systems Security Engineering and Management**

3 Credits This course presents a system and management view of information security: what it is, what drives the requirements for information security, how to integrate it into the systems-design process and life-cycle security management of information systems. A second goal is to cover basic federal policies on government information security and methodologies. Topics include information-security risk management, security policies, security in the systems-engineering process, laws related to information security and management of operational systems.

Prerequisite(s): Graduate status and CS 392 or equivalent.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6813 Information, Security and Privacy**

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6823 Network Security**

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Electives: 6 Credits

CS 9093 Biometrics

3 Credits The course concentrates on the unique advantages that biometrics brings to computer security. The course also addresses such challenging issues as security strength, recognition rates and privacy, as well as alternatives of passwords and smart cards. Students gain knowledge in the building blocks of this field: image and signal processing, pattern recognition, security and privacy and secure system design. By the end of the course students are able to evaluate and design security systems that include biometrics.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6903 Modern Cryptography

3 Credits This course examines modern cryptography from a theoretical perspective, with an emphasis on “provable security.” The course looks particularly at cryptographic primitives that are the building blocks of various cryptographic applications. The course studies notions of security for a given cryptographic primitive, its various constructions and respective security analysis based on the security notion. The cryptographic primitives covered include pseudorandom functions, symmetric encryption (block ciphers), hash functions and random oracles, message authentication code, asymmetric encryption and digital signatures. Time permitting, the course covers how to build secure cryptographic protocols for authenticated key exchange, using the primitives studied. Also covered: various number-theoretic assumptions upon which cryptography is based.

Prerequisite(s): Graduate status.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9163 Application Security

3 Credits This course addresses the design and implementation of secure applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6963 Digital Forensics

3 Credits This course introduces information-technology professionals to the application of forensic science principles and practices for collecting, preserving, examining, analyzing and presenting digital evidence. The course includes selected topics from the legal, forensic and information-technology domains and uses lecture, laboratory and written projects to illustrate these topics.
Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

* available online.

For more information, contact Professor Nasir Memon at memon@poly.edu.

**Information Security Graduate Certificate**

**Certificates in Information Assurance**

As a National Security Agency–designated Center of Academic Excellence in Information Assurance, NYU-Poly offers NSA-approved certificates in information assurance. The certificates are awarded to students who pursue a bachelor’s or master’s degree in computer science, computer engineering, telecommunication or electrical engineering and who complete the following course requirements:

**NSTISSI 4011: Information Security**

**Requirements for the Information Security Professional Certificate: 27 Credits**

**CS 392 Computer Security**

3 Credits This course covers cryptographic systems. Topics: Capability and access control mechanisms, authentication models, protection models. Database and operating system security issues, mobile code, security kernels. Malicious code, Trojan horses and computer viruses. Security policy formation and enforcement, legal aspects and ethical aspects.

Prerequisite(s): CS 2214 and MA 2312. Corequisite(s): CS 3224.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6813 Information, Security and Privacy**

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.
CS 393 Network Security

3 Credits This course covers reviews networking. Topics: Basic notations of confidentiality, integrity, availability; cryptographic systems, coding and decoding messages. Cryptographic protocols for privacy, integrity, key exchange and access control. TCP/IP security; Firewalls, IPSec; secure ecommerce. Intrusion detection, prevention, response. Advanced topics are included.

Prerequisite(s): CS 3224 and CS 6843, or EE 136, EL 5363 or EL 5373.

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.

Note: Online version available.

CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.

CS 6803 Information Systems Security Engineering and Management

3 Credits This course presents a system and management view of information security: what it is, what drives the requirements for information security, how to integrate it into the systems-design process and life-cycle security management of information systems. A second goal is to cover basic federal policies on government information security and methodologies. Topics include information-security risk management, security policies, security in the systems-engineering process, laws related to information...
security and management of operational systems.

Prerequisite(s): Graduate status and CS 392 or equivalent.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 2134 Data Structures and Algorithms**

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
or

**CS 5403 Data Structures and Algorithms**

3 Credits This course introduces data structures. Topics include program specifications and design; abstract data types; stacks, queues; dynamic storage allocation; sequential and linked implementation of stacks and queues; searching methods, sequential and binary; binary trees and general trees; hashing; computational complexity; sorting algorithms: selection sort, heap sort, mergesort and quicksort; comparison of sorting techniques and analysis.

Prerequisite(s): Graduate status and CS 5303.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 2214 Computer Architecture and Organization**

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2
or

**CS 6133 Computer Architecture I**

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer- performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor
implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3224 Operating Systems**

*4 Credits* This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

**CS 6233 Introduction to Operating Systems**

*3 Credits* This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 3314 Design and Implementation of Programming Languages**

*4 Credits* This course covers issues underlying the design of high-level programming languages, along with elements of the compiler technology used to translate those languages into executable code. Topics covered include formal description of language syntax, parsing, memory management, attributes of variables and their binding times, control and data abstraction mechanisms and object-oriented language features. The focus is on imperative and object-oriented languages, with brief introduction to functional and logic-programming paradigms. Substantial programming projects are required.

Prerequisite(s): CS 2134 (C- or better) and MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

**CS 6373 Programming Languages**

*3 Credits* This course covers the structures, notations and semantics of programming languages. Topics: Issues of scope, type structure and parameter passing. Control structures, including support for exception handling and concurrency. Abstract data types and object oriented languages. Programming in the large. Implementation issues. Functional, logic programming languages. Examples from a variety of languages.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EE 136 Communication Networks

3 Credits This course develops basic techniques used in communication networks. After protocol layering is introduced, algorithms and protocols are discussed for use in each of the five layers: physical, data link, network, transport and application. Specific protocols such as TCP/IP, ATM, SS7 are included.

Prerequisite(s): junior status in electrical engineering, computer engineering, or computer science. Corequisite(s): for EE majors: MA 3012 and MA 3112; for CompE/CS majors: MA 2212 and MA 2222.
Note: ABET competencies: a, c, e, j, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5363 Principles of Communication Networks

3 Credits This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

Prerequisite(s): MA 3012 or instructor’s permission.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Software Engineering Graduate Certificate

The advanced certificate in software engineering comprises five graduate-level courses that give students the knowledge and skills to compete successfully in the software development arena. Students who want to continue their studies may apply these courses to the MS program in computer science.

NYU-Poly, responding to the importance of high-quality software development and integration industry, offers a certificate program in software engineering. This course module provides the knowledge and skills needed to compete successfully in this arena. Topics covered include object-oriented software design, software validation and project management.

The software-engineering certificate is a series of five graduate-level courses. Three required core courses prepare the computer-science professional for a career in advanced software-development. In addition, students choose two other courses from a variety of rotating electives. The elective courses cover areas of current interest to the software-engineering community and allow students to customize their education.

Core Courses: 9 Credits

CS 6063 Software Engineering I

3 Credits The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management.
Understanding the processes applicable to the software development/integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6073 Software Engineering II

3 Credits The course covers modern, advanced software engineering approaches with theory and practice orientations. Important design and management issues are analyzed and evaluated. Technical and management tradeoffs in distributed software systems are emphasized. An extensive number of real world case studies are assessed. A class project is required.

Prerequisite(s): Graduate status and CS 6063.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6083 Principles of Database Systems

3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.

Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives: 6 Credits

CS 9963 Advanced Project in Computer Science

3 Credits This course permits the student to perform research in computer science with a narrower scope than a master’s thesis. Acceptance of a student by a faculty adviser is required before registration. A project report and an oral examination on it are required.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- CS 9103 Object Oriented Design with Java

CS 9163 Application Security

3 Credits This course addresses the design and implementation of secure applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6813 Information, Security and Privacy

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

* Highly recommended

Entrance requirements for the certificate program are the same as for the MS program. Students who have superior academic credentials but who lack sufficient background in computer science take two prerequisite courses (CS 5303 Introduction to Programming and Problem Solving and CS 5403 Data Structures and Algorithms).

Masters

Computer Science, M.S.

Master's Degree Requirements

To satisfy the requirements for the master’s degree, the student must complete 30 credits, as described below, with an overall average of B. In addition, a B average is required across the six core courses, as indicated below. The master’s curriculum has two components: 18 credits of core elective courses and 12 credits of general elective courses.

Core Electives and Requirements

Core electives are organized into three core areas: Computer Systems, Programming/Software and Theory. Students must take at least six core elective courses, with two courses coming from each of the core areas.

Systems Core Area

CS 6133 Computer Architecture I
3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer-performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6143 Computer Architecture II

3 Credits This course covers high-speed computer design. Topics: Uni-processor computer architectures that exploit parallelism, advanced pipelining, superscalar, VLIW, vector processors. Parallel processing: Interconnection structures, MIMD and SIMD systems. Other selected parallel computing topics, such as parallel algorithms, PRAM machines and multicore processing.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6233 Introduction to Operating Systems

3 Credits This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6243 Operating Systems II

3 Credits This course surveys recent important commercial and research trends in operating systems. Topics may include virtualization, network server design and characterization, scheduling and resource optimization, file systems, memory management, advanced debugging techniques, data-center design and energy utilization.

Prerequisite(s): CS 6233.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6253 Distributed Operating Systems

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6813 Information, Security and Privacy

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Theory Core Area

CS 6003 Foundations of Computer Science
3 Credits This course covers logic, sets, functions, relations, asymptotic notation, proof techniques, induction, combinatorics, discrete probability, recurrences, graphs, trees, mathematical models of computation and undecidability.

Prerequisite(s): Graduate status. Corequisite(s): CS 5303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6033 Design and Analysis of Algorithms I

3 Credits This course reviews basic data structures and mathematical tools. Topics: Data structures, priority queues, binary search trees, balanced search trees. Btrees. Algorithm design and analysis techniques illustrated in searching and sorting: heapsort, quicksort, sorting in linear time, medians and order statistics. Design and analysis techniques: dynamic programming, greedy algorithms. Graph algorithms: elementary graph algorithms (breadth first search, depth first search, topological sort, connected components, strongly connected components), minimum spanning tree, shortest path. String algorithms. Geometric algorithms. Linear programming. Brief introduction to NP completeness.

Prerequisite(s): Graduate status, CS 5403 and CS 6003.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6043 Design and Analysis of Algorithms II

3 Credits This course covers techniques in advanced design and analysis. Topics: Amortized analysis of algorithms. Advanced data structures: binomial heaps, Fibonacci heaps, data structures for disjoint sets, analysis of union by rank with path compression. Graph algorithms: elementary graph algorithms, maximum flow, matching algorithms. Randomized algorithms. Theory of NP completeness and approach to finding (approximate) solutions to NP complete problems. Selected additional topics that may vary.

Prerequisite(s): Graduate status and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6753 Theory of Computation

3 Credits This course introduces the theory of computation. Topics: Formal languages and automata theory. Deterministic and non-deterministic finite automata, regular expressions, regular languages, context-free languages. Pumping theorems for regular and context-free languages. Turing machines, recognizable and decidable languages. Limits of computability: the Halting Problem, undecidable and unrecognizable languages, reductions to prove undecidability. Time complexity, P and NP, Cook-Levin theorem, NP completeness.

Prerequisite(s): Graduate status and CS 6003 or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6903 Modern Cryptography

3 Credits This course examines modern cryptography from a theoretical perspective, with an emphasis on “provable security.” The course looks particularly at cryptographic primitives that are the building blocks of various cryptographic applications. The course studies notions of security for a given cryptographic primitive, its various constructions and respective security analysis based on the security notion. The cryptographic primitives covered include pseudorandom functions, symmetric encryption (block ciphers), hash functions and random oracles, message authentication code, asymmetric encryption and digital signatures. Time permitting, the course covers how to build secure cryptographic protocols for authenticated key exchange, using the
primitives studied. Also covered: various number-theoretic assumptions upon which cryptography is based.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6703 Computational Geometry

3 Credits This course introduces data structures and algorithms for geometric data. Topics include intersection, polygon triangulation, linear programming, orthogonal range searching, point location, Voronoi diagrams, Delaunay triangulations, arrangements and duality, geometric data structures, convex hulls, binary space partitions, robot motion planning, quadtrees, visibility graphs, simplex range searching.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Programming/Software Core Area

CS 6063 Software Engineering I

3 Credits The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management. Understanding the processes applicable to the software development/integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6073 Software Engineering II

3 Credits The course covers modern, advanced software engineering approaches with theory and practice orientations. Important design and management issues are analyzed and evaluated. Technical and management tradeoffs in distributed software systems are emphasized. An extensive number of real world case studies are assessed. A class project is required.

Prerequisite(s): Graduate status and CS 6063.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6083 Principles of Database Systems

3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.

Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6373 Programming Languages

3 Credits This course covers the structures, notations and semantics of programming languages. Topics: Issues of scope, type structure and parameter passing. Control structures, including support for exception handling and concurrency. Abstract data types and object oriented languages. Programming in the large. Implementation issues. Functional, logic programming languages. Examples from a variety of languages.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6413 Compiler Design and Construction

3 Credits This course covers compiler organization. Topics: Lexical analysis, syntax analysis, abstract syntax trees, symbol table organization, code generation. Introduction to code optimization techniques.

Prerequisite(s): CS 5403, CS 6133 and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6533 Interactive Computer Graphics

3 Credits This course introduces the fundamentals of computer graphics with hands-on graphics programming experiences. Topics include graphics software and hardware, 2D line segment-scan conversion, 2D and 3D transformations, viewing, clipping, polygon-scan conversion, hidden surface removal, illumination and shading, compositing, texture mapping, ray tracing, radiosity and scientific visualization.

Prerequisite(s): Graduate status and CS 5403 or equivalents and knowledge of C or C++ programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6613 Artificial Intelligence I

3 Credits Artificial Intelligence (AI) is an important topic in computer science and offers many diversified applications. It addresses one of the ultimate puzzles humans are trying to solve: How is it possible for a slow, tiny brain, whether biological or electronic, to perceive, understand, predict and manipulate a world far larger and more complicated than itself? And how do people create a machine (or computer) with those properties? To that end, AI researchers try to understand how seeing, learning, remembering and reasoning can, or should, be done. This course introduces students to the many AI concepts and techniques.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9163 Application Security

3 Credits This course addresses the design and implementation of secure applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

Additionally, for each of the courses, Discrete Mathematics (CS 6003), Computer Architecture I (CS 6133), Operating Systems I (CS 6233), Design and Analysis of Algorithms I (CS 6033), Programming Languages (CS 6373), the following rule applies:

Students are not permitted to repeat any of the above courses if they have already taken it or its equivalent at the undergraduate or graduate level and received a grade of B or better.

General Electives Requirements

In addition to the core electives, students are required to take four general elective courses but have considerable flexibility; the only restriction is that no more than two of the courses may be taken from outside the Department of Computer Science and Engineering. In particular:

- Master’s thesis (6 credits) and/or independent study courses may be part of a student’s four elective courses.
- Any of the courses in the three core areas may be chosen as electives.
- Graduate-level courses from outside of the department (at most two) may be chosen as electives.
- Any CS graduate course not included in the core areas may be chosen as electives.

These courses include:

**CS 6273 Performance Evaluation of Computer Systems**

*3 Credits* This course focuses on modeling and performance analysis of computer systems. It concentrates on testing and evaluation of three-tiered distributed client/server and WEB-based systems and generally on distributed networking systems. The course presents and evaluates various systems architectures from a macro and micro viewpoint.

*Prerequisite(s):* Graduate status and EL 5363 or MA 2212/MA 2222 and instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6643 Computer Vision and Scene Analysis**

*3 Credits* An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.

*Prerequisite(s):* Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6673 Neural Network Computing**
This course introduces neural network models and their applications. Topics: Discussion of organization and learning in neural network models including perceptrons, adalines, backpropagation networks, recurrent networks, adaptive resonance theory and the neocognitron. Implementations in general and special purpose hardware, both analog and digital. Application in various areas with comparisons to nonneural approaches. Decision systems, nonlinear control, speech processing and vision.

Prerequisite(s): Graduate status and CS 5403; some familiarity with matrix notation and partial derivatives is recommended.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS 9013 UNIX Systems (Perl)
- CS 9053 Introduction to Java
- CS 9073 Human and Computer Interaction

CS 6093 Advanced Database Systems

This advanced course on database systems and data management are assumed to have a solid background in databases. The course typically covers a selection from the following topics: (1) advanced relational query processing and optimization, (2) OLAP and data warehousing, (3) data mining, (4) stream databases and other emerging database architectures and applications, (5) advanced transaction processing, (6) databases and the Web: text, search and semistructured data, or (7) geographic information systems. Topics are taught based on a reading list of selected research papers. Students work on a course project and may have to present in class.

Prerequisite(s): Graduate status and CS 6083 or equivalent, including experience with a relational database system.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS 9093 Computer Simulation

CS 9093 Biometrics

The course concentrates on the unique advantages that biometrics brings to computer security. The course also addresses such challenging issues as security strength, recognition rates and privacy, as well as alternatives of passwords and smart cards. Students gain knowledge in the building blocks of this field: image and signal processing, pattern recognition, security and privacy and secure system design. By the end of the course students are able to evaluate and design security systems that include biometrics.

Prerequisite(s): Graduate status.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CS 9103 Object Oriented Design with Java

CS 6923 Machine Learning

This course introduces the field of machine learning and covers standard machine-learning techniques, such as decision trees, nearest neighbor, Bayesian methods, support vector machines and logistic regression. Topics: Basic concepts in computational learning theory including the PAC model and VC dimension. Methods for evaluating and comparing machine learning techniques.

Prerequisite(s): Graduate status.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6913 Web Search Engines

3 Credits This course covers the basic technology underlying Web search engines and related tools. The main focus is on large-scale Web search engines (such as Google, Yahoo and MSN Search) and their underlying architectures and techniques. Students learn how search engines work and get hands-on experience in how to build search engines from the ground up. Topics are based on a reading list of recent research papers. Students must work on a course project and may have to present in class.

Prerequisite(s): Good programming skills and graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Doctorate

Computer Science, Ph.D.

Requirements for PhD in Computer Science

Entrance Requirements

The preliminary requirements for admission to the program include the following:

1. A Bachelor’s degree in science, engineering or management from an accredited school and a superior academic record, or
2. A Master’s degree or one year of graduate work in an analytically based area and a superior academic record.
   Applicants must submit GRE general exam scores, at least two letters of recommendation, a statement of purpose and all relevant academic records, in addition to the completed application form.

The PhD program consists of four parts:

A. Courses
B. Qualifying exams
C. Dissertation Proposal
D. Dissertation

Core Electives and Credits Requirements

A minimum of 75 credits of graduate work is required beyond the BS degree, including at least 21 credits of dissertation. A Master of Science in Computer Science degree may be transferred in as 30 credits without taking individual courses into consideration. Other graduate course work may be transferred in on an individual-course basis. This transfer includes courses taken for degrees other than a Master of Science in Computer Science.

Students must take at least two courses in each of the following three areas. In the theory area, one of these two courses must be Theory of Computation (CS 6753), unless an equivalent course has been taken. In selecting these courses, students should not choose courses that overlap substantially with previous courses at NYU-Poly or elsewhere.
Systems Core Area

CS 6143 Computer Architecture II

3 Credits This course covers high-speed computer design. Topics: Uni-processor computer architectures that exploit parallelism, advanced pipelining, superscalar, VLIW, vector processors. Parallel processing: Interconnection structures, MIMD and SIMD systems. Other selected parallel computing topics, such as parallel algorithms, PRAM machines and multicore processing.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6243 Operating Systems II

3 Credits This course surveys recent important commercial and research trends in operating systems. Topics may include virtualization, network server design and characterization, scheduling and resource optimization, file systems, memory management, advanced debugging techniques, data-center design and energy utilization.

Prerequisite(s): CS 6233.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6253 Distributed Operating Systems

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6813 Information, Security and Privacy
This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6823 Network Security

This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Theory Core Area

CS 6043 Design and Analysis of Algorithms II

This course covers techniques in advanced design and analysis. Topics: Amortized analysis of algorithms. Advanced data structures: binomial heaps, Fibonacci heaps, data structures for disjoint sets, analysis of union by rank with path compression. Graph algorithms: elementary graph algorithms, maximum flow, matching algorithms. Randomized algorithms. Theory of NP-completeness and approach to finding (approximate) solutions to NP-complete problems. Selected additional topics that may vary.

Prerequisite(s): Graduate status and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6753 Theory of Computation

This course introduces the theory of computation. Topics: Formal languages and automata theory. Deterministic and non-deterministic finite automata, regular expressions, regular languages, context-free languages. Pumping theorems for regular and context-free languages. Turing machines, recognizable and decidable languages. Limits of computability: the Halting Problem, undecidable and unrecognizable languages, reductions to prove undecidability. Time complexity, P and NP, Cook-Levin theorem, NP completeness.
**CS 6903 Modern Cryptography**

*3 Credits* This course examines modern cryptography from a theoretical perspective, with an emphasis on “provable security.” The course looks particularly at cryptographic primitives that are the building blocks of various cryptographic applications. The course studies notions of security for a given cryptographic primitive, its various constructions and respective security analysis based on the security notion. The cryptographic primitives covered include pseudorandom functions, symmetric encryption (block ciphers), hash functions and random oracles, message authentication code, asymmetric encryption and digital signatures. Time permitting, the course covers how to build secure cryptographic protocols for authenticated key exchange, using the primitives studied. Also covered: various number-theoretic assumptions upon which cryptography is based.

*Prerequisite(s):* Graduate status.

**CS 6703 Computational Geometry**

*3 Credits* This course introduces data structures and algorithms for geometric data. Topics include intersection, polygon triangulation, linear programming, orthogonal range searching, point location, Voronoi diagrams, Delaunay triangulations, arrangements and duality, geometric data structures, convex hulls, binary space partitions, robot motion planning, quadtrees, visibility graphs, simplex range searching.

*Prerequisite(s):* Graduate status.

**Programming/Software Core Area**

**CS 6063 Software Engineering I**

*3 Credits* The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management. Understanding the processes applicable to the software development/integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

*Prerequisite(s):* Graduate status and CS 5403.

**CS 6073 Software Engineering II**

*3 Credits* The course covers modern, advanced software engineering approaches with theory and practice orientations. Important design and management issues are analyzed and evaluated. Technical and management tradeoffs in distributed software systems are emphasized. An extensive number of real world case studies are assessed. A class project is required.

*Prerequisite(s):* Graduate status and CS 6063.
CS 6083 Principles of Database Systems

3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.

Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6413 Compiler Design and Construction

3 Credits This course covers compiler organization. Topics: Lexical analysis, syntax analysis, abstract syntax trees, symbol table organization, code generation. Introduction to code optimization techniques.

Prerequisite(s): CS 5403, CS 6133 and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6533 Interactive Computer Graphics

3 Credits This course introduces the fundamentals of computer graphics with hands-on graphics programming experiences. Topics include graphics software and hardware, 2D line segment-scan conversion, 2D and 3D transformations, viewing, clipping, polygon-scan conversion, hidden surface removal, illumination and shading, compositing, texture mapping, ray tracing, radiosity and scientific visualization.

Prerequisite(s): Graduate status and CS 5403 or equivalents and knowledge of C or C++ programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6613 Artificial Intelligence I

3 Credits Artificial Intelligence (AI) is an important topic in computer science and offers many diversified applications. It addresses one of the ultimate puzzles humans are trying to solve: How is it possible for a slow, tiny brain, whether biological or electronic, to perceive, understand, predict and manipulate a world far larger and more complicated than itself? And how do people create a machine (or computer) with those properties? to that end, AI researchers try to understand how seeing, learning, remembering and reasoning can, or should, be done. This course introduces students to the many AI concepts and techniques.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9163 Application Security

3 Credits This course addresses the design and implementation of secure applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

The CSE faculty may modify these area course offerings from time to time. Certain selected topics courses may be used to fulfill these requirements, with prior written permission from the CSE Department.

Students must receive at least a grade of B in each of the six courses; further, the gradepoint average over these six courses must be at least a 3.5. Full-time students must complete these course requirements by the end of their second year.

Additionally, for each of the courses Computer Architecture I (CS 6133), Operating Systems I (CS 6233), Design and Analysis of Algorithms I (CS 6033), Programming Languages (CS 6373), the following rule applies: The student must take the course unless it was taken as an equivalent course (at either the graduate or undergraduate level) with a grade of B or higher; if the student took an equivalent course and received a B grade or higher, he or she is not be permitted to take the course at the Institute as part of this PhD program without special permission.

Qualifying Exam

The qualifying exam assesses the student’s knowledge of computer science and ability to perform dissertation-level research. The student’s evaluation is based on two components: a research exam and course work.

Research Exam

After entering the PhD program, each student works on a research project directed by a research adviser. By the end of the second year, the student must take a research exam based on this work. The research exam is tailored to the student’s research and has the following three parts:

1. Written report
2. Oral presentation
3. Answering of questions posed by the research exam committee

The written report must be submitted to the research-exam committee at least one week before the oral presentation. The oral presentation is open to the public. Following the presentation, the student answers questions posed by the research-exam committee.

The research exam assesses the student’s ability to do dissertation-level research. The exact format of the report and presentation may vary depending upon the student’s focus area and previous research accomplishments. The student must have the format approved by his/her research adviser. If students have their research results by the time of the research exam, then they should focus their report and presentation on those results and discuss related work and ideas for future research. If students have not yet obtained research results or have only preliminary results, their report and presentation should consist of a survey of related work, a discussion of ideas pursued so far, and ideas for future research.

Students may schedule research exams during two time periods in the year; a range of dates near the end of the Fall and Spring semesters will be announced in advance by the graduate director. To take the research exam, a student, in consultation with his/her research adviser, must form (at least one month before the exam) a research exam committee comprising three faculty members—one is the research adviser and, at most, two are from outside the department or from outside the Institute.

Course Component

The student’s overall course performance is evaluated as part of the qualifying exam. Special emphasis is placed on performance in PhD core courses. Students taking the research exam in their third semester must complete at least four PhD core courses by
the end of the third semester for their course performance to be evaluated at the end of the third semester. Otherwise, their
evaluation is delayed until the end of the fourth semester, by which time they must have taken all six PhD core courses.

Evaluation of the student’s course performance usually is based on a review of the student’s transcript and possible consultation
with course instructors. However, in special cases, students may be subject to additional evaluation and/or additional written
exams in some core course areas.

Evaluation of Performance on the Qualifying Exam

The overall decision on whether a student passes or fails the qualifying exam is determined at a meeting of the CSE faculty,
which examines the research-exam result and evaluates the student’s course performance. The faculty may issue a grade of pass,
fail or conditional pass. The faculty may use the grade of conditional pass to impose additional specific and time-restricted
requirements on the student. Such a grade is converted to a pass or a fail, depending on whether the student meets these
requirements.

Students who do fail the qualifying exam on the first attempt may retake it once. The second attempt must be made by the end of
the student’s fifth semester. Students who do not pass the qualifying exam on their second attempt are dismissed from the PhD
program.

Note:

A student may take thesis credits only after passing the qualifying exam. Students entering the PhD program with a master’s
degree in CS are urged to take the research exam and at least four of the required PhD core courses by the end of the third
semester. In this way, the student has the potential to pass the qualifying exam by the end of the third semester and to begin
taking thesis credits in the fourth semester.

Dissertation

The last, and most substantial, aspect of the PhD program is the dissertation. The dissertation must embody a significant original
research contribution and must be written in accepted scholarly style. The research should be conducted in close consultation
with the student’s adviser. It is strongly recommended that at least one paper on the research be submitted to a refereed archival
journal or refereed conference. When the adviser feels that the student has obtained sufficiently significant research results and
has written an acceptable dissertation, a public dissertation defense is scheduled. The defense includes the candidate’s oral
presentation and questions from the dissertation committee.

Additional requirements for the PhD dissertation are available from the office of the Associate Provost of Research and PhD
Programs.

Cyber Security

Program Director: Nasir Memon

The MS in Cyber Security Program at NYU-Poly provides students with the critical knowledge and skills to become experts in
cyber security, the science of protecting vital computer networks and electronic infrastructures from attacks. The program
responds to the growing demand for security specialists in industry and in government organizations.

The cyber-security field is expected to generate many new jobs over the next decade as companies across all industries continue
to place top priority on safeguarding their data and information systems. Graduates are well prepared for careers as developers of
security products and as security-application programmers, security analysts, penetration testers, vulnerability analysts and
security architects. They also may pursue positions as security researchers or continue their studies at the PhD level.
Special Provisions

Transfer Courses

Students with a prior MS or an advanced degree from another institution may be allowed to transfer a maximum of two courses. The Cyber Security MS Program Committee determines the course equivalence of the transferred course work. For each course to be transferred, the student must provide a complete description, along with lecture and assignment materials. Courses are considered for transfer credit if they were completed less than three years ago.

Student Transfers from other Master’s Programs at Polytechnic Institute of NYU
Qualified MS students registered in other NYU-Poly master’s programs (e.g., the CS master’s program), who can demonstrate adequate skills in cyber security, may be permitted to transfer to the MS in Cyber Security Program. The admission criteria and program requirements are detailed in previous sections.

MS Cyber-Security Transfers to the PhD Program in Computer Science
Qualified Cyber Security MS students may transfer into the PhD program in Computer Science. The MS Program Committee first must recommend the applicant to the PhD Admissions Committee.

NOTE: Any other programmatic issues are evaluated individually by the Cyber Security MS Program Committee.

Requirements for Master of Science in Cyber Security

Entrance Requirements

Students need a superior undergraduate record from an accredited institution. Preferably, students should have an undergraduate degree in computer science, mathematics, science or engineering. However, applicants with degrees in other fields are considered individually for admission. Additionally, students must satisfy the following:

1. Knowledge of mathematics through calculus.
2. At least one year of university-level science.
3. A working knowledge of a high-level, general-purpose programming language (preferably C++) and of data structures.

Students who do not satisfy requirement 3 may satisfy the requirements by taking one or two non-credit, preparatory bridge courses.

Students who have superior academic credentials but who lack insufficient background are admitted with conditional status, pending satisfactory completion of preparatory bridge courses. In some cases, such students are interviewed to determine the necessary preparatory courses they need. Successful completion of the preparatory courses with a B or better average grade is a necessary condition for transfer to regular status.

The demonstrated ability to communicate in written and spoken English is essential to success in graduate studies in computer science and information systems engineering and is required for regular status. Foreign students and others for whom English is a second language may be required to undertake preparatory work to improve their language skills before admission into the graduate program.

Admission with advanced standing is accepted in accordance with NYU-Poly regulations published in the catalog. A maximum of 9 credits may be applied to the MS degree from previous graduate work at an acceptable institution.

Statement of Purpose
Applicants also should submit a special purpose statement clearly stating their experience in cyber security, and their motivation for applying to the program.

Masters

Cyber Security, M.S.

Master's Degree Requirements

Core Electives and Requirements

To satisfy the requirements for the Cyber-Security MS program, the student must complete 30 credits, as listed below, with an overall average of B. In addition, a B average is required across all the required core courses, as indicated below.*

Computer Science Core Courses

CS 6233 Introduction to Operating Systems

3 Credits This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6033 Design and Analysis of Algorithms I
3 Credits This course reviews basic data structures and mathematical tools. Topics: Data structures, priority queues, binary search trees, balanced search trees. Btrees. Algorithm design and analysis techniques illustrated in searching and sorting: heapsort, quicksort, sorting in linear time, medians and order statistics. Design and analysis techniques: dynamic programming, greedy algorithms. Graph algorithms: elementary graph algorithms (breadth first search, depth first search, topological sort, connected components, strongly connected components), minimum spanning tree, shortest path. String algorithms. Geometric algorithms. Linear programming. Brief introduction to NP completeness.

Prerequisite(s): Graduate status, CS 5403 and CS 6003.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Security Core Courses

Most of the required Security Core courses have a project component.

CS 6813 Information, Security and Privacy

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6903 Modern Cryptography

3 Credits This course examines modern cryptography from a theoretical perspective, with an emphasis on “provable security.” The course looks particularly at cryptographic primitives that are the building blocks of various cryptographic applications. The course studies notions of security for a given cryptographic primitive, its various constructions and respective security analysis based on the security notion. The cryptographic primitives covered include pseudorandom functions, symmetric encryption (block ciphers), hash functions and random oracles, message authentication code, asymmetric encryption and digital signatures. Time permitting, the course covers how to build secure cryptographic protocols for authenticated key exchange, using the
primitives studied. Also covered: various number-theoretic assumptions upon which cryptography is based.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9163 Application Security

3 Credits This course addresses the design and implementation of secure applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives (3 courses)

Students may choose security-related courses from NYU-Poly or from New York University, including courses in the psychology, law and sociology departments. Selected courses must be approved by the Program Committee. All of the following courses are preapproved; others must be approved by the Program Committee.

CS 6573 Penetration Testing and Vulnerability Analysis

3 Credits This advanced course in computer and network security focuses on penetration testing and vulnerability analysis. It introduces methodologies, techniques and tools to analyze and identify vulnerabilities in standalone and networked applications.

Prerequisite(s): CS 6823.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6803 Information Systems Security Engineering and Management

3 Credits This course presents a system and management view of information security: what it is, what drives the requirements for information security, how to integrate it into the systems-design process and life-cycle security management of information systems. A second goal is to cover basic federal policies on government information security and methodologies. Topics include information-security risk management, security policies, security in the systems-engineering process, laws related to information security and management of operational systems.

Prerequisite(s): Graduate status and CS 392 or equivalent.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9093 Biometrics
3 Credits The course concentrates on the unique advantages that biometrics brings to computer security. The course also addresses such challenging issues as security strength, recognition rates and privacy, as well as alternatives of passwords and smart cards. Students gain knowledge in the building blocks of this field: image and signal processing, pattern recognition, security and privacy and secure system design. By the end of the course students are able to evaluate and design security systems that include biometrics.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6963 Digital Forensics

3 Credits This course introduces information-technology professionals to the application of forensic science principles and practices for collecting, preserving, examining, analyzing and presenting digital evidence. The course includes selected topics from the legal, forensic and information-technology domains and uses lecture, laboratory and written projects to illustrate these topics.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6393 Advanced Network Security

3 Credits While the recent proliferation of broadband wire-line and wireless networking technologies have substantially increased the available network capacity and enabled a wide-range of feature-rich high-speed communication services, security remains a major concern. Network attacks have become common recurring events that increasingly threaten the proper functioning and continual success of the communication infrastructure and services. One way to mitigate such threats is to develop new security/defense architectures, systems, methodologies and algorithms that can scale together with the communications infrastructure in terms of operating speed, operational simplicity and manageability. This course aims to understand the theoretical, architectural, system and implementation issues related to all aspects of security in high-speed networks and study various proposed solutions. Students are required to read research papers and complete a term project with either simulation programs to evaluate the proposed schemes, or architecture/VHDL designs for the schemes.

Prerequisite(s): CS 6823 or adviser approval.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9963 Advanced Project in Computer Science

3 Credits This course permits the student to perform research in computer science with a narrower scope than a master’s thesis. Acceptance of a student by a faculty adviser is required before registration. A project report and an oral examination on it are required.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6243 Operating Systems II

3 Credits This course surveys recent important commercial and research trends in operating systems. Topics may include virtualization, network server design and characterization, scheduling and resource optimization, file systems, memory management, advanced debugging techniques, data-center design and energy utilization.

Prerequisite(s): CS 6233.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6043 Design and Analysis of Algorithms II

3 Credits This course covers techniques in advanced design and analysis. Topics: Amortized analysis of algorithms. Advanced data structures: binomial heaps, Fibonacci heaps, data structures for disjoint sets, analysis of union by rank with path compression. Graph algorithms: elementary graph algorithms, maximum flow, matching algorithms. Randomized algorithms. Theory of NP completeness and approach to finding (approximate) solutions to NP complete problems. Selected additional topics that may vary.

Prerequisite(s): Graduate status and CS 6033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6133 Computer Architecture I

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer performance and capacity improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Footnotes

* Any required Computer Science core courses may be replaced if the student has taken a similar class.

Research Project (Optional)

One goal of the MS in Cyber Security is to introduce students to exciting research in cyber security and to attract some of them to pursue a PhD degree. To this end, NYUPoly offers a semester-long Advanced Project in Computer Science (CS 9963) in cyber security (as listed above), as an elective. Students selecting this option are guided by a research professor and gain invaluable research experience.

Master’s Thesis (optional)
In addition to the above semester-long, research experience for students, the program also offers research-oriented MS students the master’s thesis option. With this option, a student takes 6 credits of CS 997X MS Thesis in Computer Science working with a faculty adviser on a research problem in cybersecurity, in lieu of two out of the three required electives.

The research need not be original, but should demonstrate adequately the student’s proficiency in the subject. An oral defense of the master’s thesis before at least three professors is required. The 6 credits of master’s thesis must span two consecutive semesters. Whenever relevant, 3 credits of CS 9963 may be used as 3 credits of CS 997X, subject to faculty-adviser approval.

**Information Systems Engineering**

*Program Director:* Robert Flynn

The Master of Science in Information Systems Engineering (ISE) Program is for professionals who want to be leaders in designing, developing and running today’s information systems, and systems based on information using the latest software tools, middleware and technologies.

The program provides rigorous training in computer science, management and emphasizes the field of information-systems engineering.

Much of the infrastructure is in place for today’s enterprise-information systems. Incompatible software and protocols, however, often separate applications on networked systems. In a Web-based world, information-systems designers need core skills to understand machine organization, operating systems and networking. Designers need enabling training in software engineering, databases and groupware. They need to understand the role of middleware and the role of management.

Systems engineers need to understand not just how to design software systems but how to lead the efforts of people carrying out the design. Engineers must create viable solutions and understand the associated business and human issues.

Students selected for the program are professionals in computing or telecommunications with two or more years of working experience.

This Master of Science program in 1987 began as a joint effort between the Department of Computer and Information Science and New York State’s Center for Advanced Technology in Telecommunications (CATT). The rigorous program consists of 10 courses including an optional independent project. The curriculum is being redesigned to allow for fewer courses (10 vs. 13)—each of which will be longer (3 credits vs. 3 units)—and to explore the technical issues surrounding service-oriented system architecture (SOA). These changes will be phased in as designed.

The program is given in two formats. Two classes meet on alternate Saturdays for the whole day. A third class can be taken during the week in conventional mode. Alternatively, classes meet every other weekend for a full Saturday and one class on the other Saturday. All-day Saturday courses typically meet at Polytechnic’s Westchester Graduate Center in Hawthorne, New York.

Alternate formats are under consideration.

**Goals and Objectives**

The ISE Program produces information-systems designers and integrators who can lead the development of heterogeneous systems and who are aware of new software tools and interfaces. The program provides people with management and technology skills to help them become leaders in the integration of software components into complex systems.

**Admission Requirements and Application Information**
Admission to the program requires a baccalaureate degree with a superior undergraduate academic record and a demonstrated familiarity with and exposure to the issues associated with the development of complex information systems. Applicants must have two years of relevant work experience in computing or telecommunications.

Applications are accepted throughout the year, but admission is for the fall semester only. Admission is contingent on an interview with the director or designee. Because enrollment is limited, early application is strongly recommended.

Masters

Information Systems Engineering, M.S.

Degree Requirements and Curriculum

The general requirements for a Master of Science, stated elsewhere in this catalog, apply to this program. The curriculum consists of 10 courses, including an optional independent project of 3 credits. The project must be completed by the end of second year and can begin as soon as the first semester.

Courses may change or new courses may be substituted to respond to changes in technology. The courses currently constituting the curriculum appear below:

Four software courses, typically from among:

CS 6083 Principles of Database Systems

3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.

Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9023 Web Technologies and Integrated Environments

3 Credits Application Architecture in a three tier (web client, application server and data base server) environment is explained and analyzed. The impact of relevant open source tools (MySQL, CSS, AJAX etc. on the final application architecture is examined. Different integrated environments are contrasted. The content of this course is expected to change each semester as technology emerges.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9033 Web Services and SOA
The service oriented architecture (SOA) is the latest application integration paradigm in the industry, developed to address the challenges of software development which anticipates the internal friction of interacting with incompatible architectures and programming models. SOA is a model of distributed software components which encapsulates business function in a reusable, composable way. SOA components, or services, are accessible using standardized protocols and are composed (or choreographed) into new applications using standard composition languages. The term “Web services” stands for a realization of the SOA paradigm as a set of XML based standards for component communication, description and composition. Middleware is software that allows different applications to interact on typically distributed computer systems.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6063 Software Engineering I

3 Credits The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management. Understanding the processes applicable to the software development/integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

One systems course typically from among:

CS 6133 Computer Architecture I

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer-performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6233 Introduction to Operating Systems

3 Credits This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
One networking course, typically from among:

**CS 6823 Network Security**

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6843 Computer Networking**

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Management electives, not more than three, typically from the following:

**MG 8203 Project Management**

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MG 6303 Operations Management

3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6013 Organizational Behavior

3 Credits Introduction to theory, research and practice to better understand human behavior in organizations. Topics include motivation and job satisfaction; decision making; group dynamics; work teams; leadership; communication; power, politics and conflict; organization culture, structure and design; impact of technology; management of work stress; organizational change and development, and career management. Analysis of organizational behavior problems by self assessments, case studies and simulations.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6083 Economics

3 Credits The course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

A project course, CS 9963, is typically taken for the degree. The content and scope of the project is typically discussed with and approved by the Program Director. Electives are chosen in consultation with the Director.

Department of Electrical and Computer Engineering

Head: H. Jonathan Chao

Mission Statement
The department’s mission is to engage students who seek educational achievement as the nation enters a new age with new demands and opportunities. The goal is to provide students with a broad-based education for electrical- and computer-engineering careers. Polytechnic students gain the skills to become creative leaders in their professional careers with the passion and desire to discover, invent, innovate, apply and advance new science and technology to solve the world’s most critical problems.

The Department

Electrical and computer engineers—whose technical skills have produced innovations in telephones, electric power systems, rapid transit, radio, television, medical electronics, computers, microelectronics, the Internet and wireless communications—have contributed more to the quality of 20th-century life than any other profession. Twenty-first century engineering innovation will be equally exciting.

The Department of Electrical and Computer Engineering is well respected worldwide for its major contributions to the profession and its tradition of teaching and research excellence. Polytechnic electrical and computer engineering graduates are prominent in university faculties, industrial labs and company boardrooms, spanning the range of the electrical, electronic and information-technology industries.

The department enters the 21st century with strong teaching and research programs in the most exciting digital-age fields: the Internet, wireless communications, computers, multimedia signal processing, robotics, automatic control and electric-power generation and distribution.

In the intimate Polytechnic environment, students benefit from frequent access to faculty members and laboratories at the forefront of innovation. In the spirit of entrepreneurship, Polytechnic’s infrastructure encourages faculty and students to transfer their inventions to industry and to start their own companies.

The department hosts the Center for Advanced Technologies in Telecommunications (CATT), a New York State-sponsored research center, and the Wireless Internet Center of Advanced Technology (WICAT), a National Science Foundation Industry/University Cooperative Research Center. Together, these centers greatly strengthen the department in telecommunication networks and in wireless-communications research and education.

Contact

Polytechnic Institute of NYU
Five MetroTech Center
Brooklyn, NY 11201

Fax: (718) 260-3906
E-mail: eceinfo@poly.edu
Web: www.poly.edu/academics/departments/electrical/

The Profession

The rapidly growing profession of electrical engineering has evolved from its early beginnings in electric-power generation and distribution through the development of radio, television, control and materials to computers, telecommunications and health care. In the last century, electrical engineers have created advances in power distribution, computers and communications that have changed the world. Their inventions have made the world a smaller, safer place and allow for immediate reporting and images from distant places that make world events part of daily life.

While electrical engineering undergraduate and graduate students concentrate on areas of electrical science, graduates apply their training to diversified fields such as electronic design, bioengineering, city planning,onautics, radio astronomy, system
engineering, image processing, telemetry, the Internet, computer design, management and patent law. As students mature and realize their abilities, they may choose professional lives in engineering, government, or education.

The expertise of Polytechnic’s electrical engineering faculty covers a wide range of fields. Principal areas of teaching and research are microelectronic devices and systems; computer engineering; telecommunications; speech and image processing; electro-optics and electroacoustics; microwave engineering; wireless communications; power systems and energy conversion; plasma science and engineering; and systems and control engineering.

Additional information about electrical engineering careers can be found online at www.ieee.org/organizations/eab/student careers.htm.

**Degrees Offered**

The Department of Electrical and Computer Engineering offers the following degree and certificate programs. Separate sections of this catalog present the objectives, requirements, advising resources and courses for individual programs.

**Bachelor of Science***

- Computer Engineering, B.S.**
- Electrical Engineering, B.S.
- Electrical and Computer Engineering (dual degree), B.S.

**Master of Science**

- Computer Engineering, M.S.**
- Electrical Engineering, M.S.
- Electrophysics, M.S.
- Systems Engineering, M.S.
- Electrical Engineering, M.S.**

**Doctor of Philosophy**

- Electrical Engineering, Ph.D.

**Graduate Certificates**

- Computer Engineering Graduate Certificate**
- Image Processing Graduate Certificate
- Telecommunication Network Management Graduate Certificate
- Wireless Communication Graduate Certificate
- Power Electronics and Systems Graduate Certificate
- Power Systems Management Graduate Certificate

*Accredited by the Accreditation Board for Engineering and Technology (ABET).

**Offered in cooperation with the Department of Computer Science and Engineering.

***Offered in cooperation with the Department of Management and the Department of Computer and Science and Engineering.

**Graduate Certificate Programs**

The department offers advanced certificate programs on current themes. Programs recognize students for successful completion of four graduate courses (12 credits) in areas of interest to working engineers. More details are available below in sections about related certificate programs. Courses completed for an advanced certificate apply toward a master’s degree in a related field. Students should consult the department’s graduate manual and website for the latest program list, which emphasizes current technology trends.
Special Undergraduate Options

The BS/MS Option: This program is available to exceptional undergraduate students, enabling them to earn both bachelor’s and master’s degrees in as little as four years.

Possible BS/MS combinations include BS in Electrical or Computer Engineering with a MS in Electrical Engineering, Telecommunications Networks, Computer Engineering or Computer Science.

Electrical and Computer Engineering (dual degree), B.S.: A student can earn a Bachelor of Science degree in Electrical and Computer Engineering by completing 142 credits.

Student Organizations

Polytechnic students may join student chapters of these professional organizations: the Institute of Electrical and Electronics Engineers (IEEE) and Eta Kappa Nu, the Electrical Engineering Honor Society.

Speciality Labs

The department keeps pace with dynamic advances in electrical and computer engineering by maintaining state-of-the-art laboratories for instruction and experimentation. Laboratory courses combine lectures, experiments and project work. These courses also provide students with a rich set of elective choices, opportunities to work on senior projects with faculty researchers, valuable hands-on experience to enhance and supplement material taught in lecture classes, and forums to practice their oral and written communication skills.

The Wireless Lab provides formal experiments, lectures and project work on state-of-the-art, commercial spread-spectrum wireless access systems, including bit-error rate analysis and UHF channel propagation measurements.

The Multimedia Lab offers students hands-on experience to acquire, process and transmit voice, audio, image and video signals to create multimedia documents and to configure networked multimedia applications.

The Local Area Networks Lab includes a set of weekly experiments using Linux-based terminals, Ethernet LANs, routers and bridges and associated software with which to conduct a variety of LAN/WAN experiments and projects.

The High-Speed Networking Lab, equipped with various equipment and tools, allows faculty and students to build hardware prototypes (VLSI/FPGA chips and PCB) and software test bed to demonstrate their research concepts in high-performance routers, network security and network on chip.

The VLSI Design Lab treats Very Large-Scale Integrated-circuit design, performance analysis and circuit characterization, using industry-standard VLSI CAD tools and hardware-description languages such as VHDL. Students study the design of CMOS logic, standard cells, gate arrays and mixed-signal (analog/digital) circuits.

The Electric Power Laboratory fosters education and research for undergraduate and graduate studies. Equipment includes modern data-acquisition equipment, smart-power supplies and loads, digital meters, computers, power transformers and classical rotating machine pairs for dynamic testing and loading. In addition, static converters are available for experiments on Smart Grid and Distributed Resources, such as solar and fuel cells, wind power and variable-speed drives.

The Control/Robotics Lab provides a variety of experiments and project work focusing on feedback control, data acquisition and computer control.
The Microwave Lab treats the design, fabrication and testing of passive and active circuits and antennas using modern CAD and measurement software and hardware.

**Center for Advanced Technology in Telecommunications**

Through the New York State Center for Advanced Technology in Telecommunications (CATT), electrical and computer engineering faculty collaborate with industry in research, education and technology transfer in telecommunications and information systems. CATT is distinguished for its innovations in many fast-moving areas, including broadband networks, peer-to-peer networking, switch design and implementation, security hardware, ad-hoc wireless networks, cellular networks, wireless local area networks, software design and reliability, search engine technology, network design tools, traffic planning and capacity engineering, image and video coding and transport.

**Wireless Internet Center for Advanced Technology**

The Wireless Internet Center for Advanced Technology (WICAT) is a National Science Foundation center organized under its Industry/University Cooperative Research program. Polytechnic Institute is the lead site for WICAT, which includes sites at the University of Virginia, Auburn University and Virginia Tech. WICAT collaborates with more than 30 industry partners to overcome technical challenges and create new applications for the future Internet. In the future, the majority of devices will be mobiles that connect wirelessly. Institute research gives companies a crystal ball with a view of the future. Industry collaboration maximizes the practical value of new knowledge created at the WICAT universities.

**Faculty**

**Professors**

**Steve Arnold**, University and Thomas Potts Professor of Physics (Joint appointment with Department of Physics)
PhD, City University of New York
*Microparticle photophysics, photonic atom biosensors*

**Frank A. Cassara**, Professor of Electrical and Computer Engineering
Director of Long Island Graduate Center
PhD, Polytechnic Institute of Brooklyn
*Electronic circuits, wireless communication systems*

**David C. Chang**, Professor of Electrical and Computer Engineering, Chancellor
PhD, Harvard University
*Electromagnetics, microwave integrated circuits*

**H. Jonathan Chao**, Professor of Electrical and Computer Engineering, Department Head
PhD, The Ohio State University
*Network security, high-performance routers, network on chip*

**Zhong-Ping Jiang**, Professor of Electrical and Computer Engineering
PhD, École des Mines de Paris (France)
*Control systems, complex networks*

**Ramesh Karri**, Professor of Electrical and Computer Engineering
PhD, University of California, San Diego
*VLSI, CAD, computer engineering*
Farshad Khorrami, Professor of Electrical and Computer Engineering
PhD, The Ohio State University
Robotics, control systems

Spencer P. Kuo, Professor of Electrical and Computer Engineering
PhD, Polytechnic Institute of Brooklyn Plasmas and electromagnetics

I-Tai Lu, Professor of Electrical and Computer Engineering
PhD, Polytechnic Institute of Brooklyn
Electromagnetics, acoustics, wireless communication

Shivendra S. Panwar, Professor of Electrical and Computer Engineering, Director of the New York State Center for Advanced Technology in Telecommunications, Director of Wireless Internet Center for Advanced Technology
PhD, University of Massachusetts, Amherst
Communication networks

S. Unnikrishna Pillai, Professor of Electrical and Computer Engineering
PhD, University of Pennsylvania
Signal processing and communications

Yao Wang, Professor of Electrical and Computer Engineering
PhD, University of California, Santa Barbara
Image and video processing, computer vision, medical imaging

Zivan Zabar, Professor of Electrical and Computer Engineering
Sc.D., Technion - Israel Institute of Technology
Electric power systems, electric drives, power electronics

Associate Professors

Dariusz Czarkowski, Associate Professor of Electrical and Computer Engineering
PhD, University of Florida
Power electronics and systems, electric drives

Nirod K. Das, Associate Professor of Electrical and Computer Engineering
PhD, University of Massachusetts
Electromagnetics, antennas, microwave integrated circuits

Francisco de Leon, Associate Professor of Electrical and Computer Engineering
PhD, University of Toronto (Canada)
Power-system analysis, distributed generation systems, smart grid

Elza Erkip, Associate Professor of Electrical and Computer Engineering
PhD, Stanford University
Wireless communication, communication theory, information theory

Sundeep Rangan, Associate Professor of Electrical and Computer Engineering
PhD, University of California, Berkeley
Wireless communication, signal processing and estimation, information theory

Ivan W. Selesnick, Associate Professor of Electrical and Computer Engineering
PhD, Rice University
Signal processing
Peter Voltz, Associate Professor of Electrical and Computer Engineering
PhD, Polytechnic Institute of New York
Communications and signal processing

Assistant Professors

Helen Li, Assistant Professor of Electrical and Computer Engineering
PhD, Purdue University
VLSI and circuit design, computer architecture, memory technology and design, microelectronics and nanotechnology

Yong Liu, Assistant Professor of Electrical and Computer Engineering
PhD, University of Massachusetts, Amherst
Communication networks

Garrett S. Rose, Assistant Professor of Electrical and Computer Engineering
PhD, University of Virginia
VLSI, Nanoelectronics, low-power circuit design

Industry Faculty

N. Sertac Artan, Industry Assistant Professor of Electrical and Computer Engineering
PhD, Istanbul Tech. University (Turkey)
High-speed network security

Matthew Campisi, Industry Assistant Professor of Electrical and Computer Engineering
MS, Polytechnic University
Signal processing, medical imaging

Michael Knox, Industry Associate Professor of Electrical and Computer Engineering
PhD, Polytechnic University
Wireless communications, RF and microwave components, analog-circuit design

Kang Xi, Industry Assistant Professor of Electrical and Computer Engineering
PhD, Tsinghua University (China)
High-speed networking

Research Faculty

Thanasis Korakis, Research Assistant Professor
PhD, University of Thessaly (Greece)
Wireless networks

Pei Liu, Research Assistant Professor
PhD, Polytechnic University
Wireless Communications and Networks

Mohamed Zahran, Research Associate Professor
PhD, University of Maryland at College Park
Computer architecture, memory-hierarchy for multicore/manycore processors
Yang Xu, Research Assistant Professor
PhD, Tsinghua University (China)
*High-speed networking*

**Adjunct Faculty**

Walid Ahmed, Adjunct Lecturer
PhD, Queens University (Canada)

Barbaros Aslan, Adjunct Lecturer
PhD, Cornell University

Eric Brendel, Adjunct Lecturer
MS, Pennsylvania State University

Mark Cavallaro, Adjunct Lecturer
MBA, Iona College

Tapan Chakraborty, Adjunct Lecturer
PhD, Rutgers University

Robert DiFazio, Adjunct Lecturer
PhD, Polytechnic University

Gusteau Duclos, Adjunct Lecturer
PhD, Polytechnic University

Barbara Gates-Karnik, Adjunct Lecturer
PhD, Fletcher School of Tufts University

Jalal Gohari, Adjunct Lecturer
BS, The City University of New York

Donald Grieco, Adjunct Lecturer
MBA, Long Island University, CW Post
MS, Polytechnic Institute of Brooklyn

Ian Harris, Adjunct Lecturer
M.Sc, Herriot-Watt University (Scotland)

Noah Jacobsen, Adjunct Lecturer
PhD, University of California, Santa Barbara

Lurng-Kuo Liu, Adjunct Lecturer
PhD, University of Maryland

Xiaoqiao Meng, Adjunct Lecturer
PhD, University of California, Los Angeles

Paul Moon, Adjunct Lecturer
PhD, University of Manitoba (Canada)

Hyung Myung, Adjunct Lecturer
PhD, Polytechnic University
Charles Perng, Adjunct Lecturer  
PhD, University of California, Los Angeles

Richard Stern, Adjunct Lecturer  
MS, Polytechnic University

George Sullivan, Adjunct Lecturer  
MS, Polytechnic University

Dong Sun, Adjunct Lecturer  
PhD, Stevens Institute of Technology

Sindhu Suresh, Adjunct Lecturer  
PhD, Polytechnic Institute of NYU

Chin-Tuan Tan, Adjunct Lecturer  
PhD, Nanyang Technological University (Singapore)

Gerald Volpe, Adjunct Lecturer  
PhD, New York University

David Wang, Adjunct Lecturer  
PhD, Polytechnic University

Fred Winter, Adjunct Lecturer  
PhD, Polytechnic University

Catherine Zhang, Adjunct Lecturer  
PhD, Harvard University

Li Zhang, Adjunct Lecturer  
PhD, Columbia University

Zhenqxue Zhao, Adjunct Lecturer  
PhD, Polytechnic University

Faculty Emeriti

David J. Goodman, Professor of Electrical and Computer Engineering  
PhD, Imperial College, University of London (England)

Leonard Bergstein, Professor Emeritus of Electrical Engineering  
PhD, Polytechnic Institute of Brooklyn

Henry L. Bertoni, Professor Emeritus of Electrical Engineering  
PhD, Polytechnic Institute of Brooklyn

Leo Birenbaum, Associate Professor Emeritus of Electrical Engineering and Electrophysics  
MS, Polytechnic Institute of Brooklyn

Donald Bolle, Professor Emeritus of Electrical Engineering, Emeritus Provost  
PhD, Purdue University

Joseph J. Bongiorno, Jr., Professor Emeritus of Electrical Engineering  
DEE, Polytechnic Institute of Brooklyn
Robert Boorstyn, Professor Emeritus of Electrical Engineering  
PhD, Polytechnic Institute of Brooklyn

Edward S. Cassedy, Professor Emeritus of Electrical Engineering  
DrEng, Johns Hopkins University

Bernard R. S. Cheo, Professor Emeritus of Electrical Engineering  
PhD, University of California at Berkeley

Douglas A. Davids, Associate Professor Emeritus of Electrical Engineering  
PhD, Johns Hopkins University

Rudolf F. Drenick, Professor Emeritus of Electrical Engineering  
PhD, University of Vienna (Austria)

Herman Farber, Associate Emeritus Professor of Electrophysics  
MEE, Polytechnic Institute of Brooklyn

Richard A. Haddad, Professor Emeritus of Electrical Engineering  
PhD, Polytechnic Institute of Brooklyn

Donald F. Hunt, Professor Emeritus of Electrical Engineering  
BS, University of Pennsylvania

Ludwik Kurz, Professor Emeritus of Electrical Engineering  
EngScD, New York University

James T. LaTourette, Professor Emeritus of Electrophysics  
PhD, Harvard University

Nathan Marcuvitz, University Professor Emeritus  
DEE, Polytechnic Institute of Brooklyn

Maurice C. Newstein, Professor Emeritus of Electrophysics  
PhD, Massachusetts Institute of Technology

Arthur A. Oliner, Professor Emeritus of Electrophysics  
PhD, Cornell University

Istvan Palocz, Professor Emeritus of Electrical Engineering and Electrophysics  
PhD, Polytechnic Institute of Brooklyn

Philip E. Sarachik, Professor Emeritus of Electrical Engineering  
PhD, Columbia University

Harry Schachter, Professor Emeritus of Electrical Engineering  
PhD, Polytechnic Institute of Brooklyn

Benjamin Senitzky, Professor Emeritus of Electrophysics  
PhD, Polytechnic Institute of Brooklyn

Sidney S. Shamis, Professor Emeritus of Electrical Engineering  
MS, Stevens Institute of Technology

Leonard G. Shaw, Professor Emeritus of Electrical Engineering  
PhD, Stanford University
Computer Engineering

Program Directors:
Ramesh Karri and Haldun Hadimioglu (undergraduate)
Ramesh Karri (graduate)

The Department of Electrical and Computer Engineering and the Department of Computer Science and Engineering offer a Computer Engineering Program for the degree of Bachelor of Science. The Department of Electrical and Computer Engineering also offers a Computer Engineering Program for the Master of Science degree.

Computer Engineering Profession

As digital computer use pervades daily life, computer engineers have designed computers and devised applications to improve the efficiency and quality of nearly all activities in business, industry, government, education and entertainment. Computer engineering draws heavily on electrical engineering topics, including electronic circuit design and analysis of physical communication and control systems, and on computer science topics, including logic design, system architecture, computer software and algorithms.

Computer engineers are in the midst of exciting times with unlimited, rapidly expanding opportunities. Engineers interact with and design supercomputers and the ubiquitous personal and portable computers. Computer engineers also play a key role in networking computers with other computers and intelligent devices. Computer engineers undertake a range of projects—from designing specialized computer hardware and reconstructing the human genome, to monitoring and controlling industrial plants and the environment, to computer graphics, robotics and the design of biomedical devices and computer networks. In addition, computer engineers design and develop hardware and embedded software-hardware systems. Importantly, computer engineers collaborate on projects that advance biology, medicine and nanoscience.

The Computer Engineering Program provides an outstanding, cutting-edge education in computer systems with emphasis on hardware and software. Toward that goal, the Computer Science and Engineering and Electrical and Computer Engineering departments incorporate the latest market and technology trends and combine the traditional disciplines of electronics, communications, control and computer programming with newer courses that include Cyber Security, Nanoscale Circuit Design, Parallel Computers, Image Processing, Biomedical Instrumentation, Web Search Engines, Wireless Networks, Peer-to-Peer Networks, SoC (System-on-a-Chip), VLSI (Very Large Scale Integration) and Game Development.

NYU-Poly has developed a strong design faculty through sponsored research programs, many of which are coordinated in NYUPoly’s Center for Advanced Technology in Telecommunications (CATT), Information Systems and Internet Security (ISIS) Lab and Wireless Internet Center for Advanced Technology (WICAT).

Additional information about computer engineering careers can be found here.
**Undergraduate Program**

The Computer Engineering, B.S. gives a broad-based background in computer engineering to prepare students for immediate employment as entrepreneurs or in industry and government or for graduate study.

**Goals and Objectives**

The undergraduate program achieves the following objectives for students:

- Graduates are expected to be engaged and advancing in their professional careers in a profession that utilizes their NYU-Poly degree, in Computer Engineering or other career path, that include industry, academia and governmental or nongovernmental organizations.
- Graduates are expected to be seeking continuous professional development and life-long learning through graduate school studies, continuing education credits and/or professional registration.

The BS program includes analysis and design courses in major computer engineering areas that build on fundamental courses in mathematics and science. Many courses include hands-on laboratory components. A variety of electives provide depth and specialization, many in commercially viable areas such as high-speed networks, databases, embedded control systems, VLSI, image processing, computer and network security and Web search.

Since most current engineering design is computer facilitated, the department includes computer-aided design (CAD) programs in many undergraduate courses to emphasize possibilities for large-scale design, corrections for unmodeled complexities, trade-offs among performance criteria and real-time simulations. The senior design project challenges each student to integrate analytical and design concepts from earlier courses to design a device or system to meet specified performance requirements.

The program recognizes that communication and interpersonal skills are essential to a successful career. Students are required to take writing-intensive courses and electives in the humanities and social sciences. They also develop those skills in design-course team projects. The Computer Engineering Program stays current with market changes through the CATT Industrial Affiliates Program, hiring professors and part-time adjunct teachers with industrial experience, frequent contacts with alumni, review of professional journals and by encouraging faculty to work in industry part-time or while on sabbatical. Where possible, classroom work challenges students to apply knowledge to current design situations. The curriculum, reflecting industry’s need for the engineering-systems approach, employs senior projects in control and robotics, advanced hardware design, imaging and embedded controllers. Economic aspects of engineering are addressed by allowing undergraduates to choose electives such as economics/finance, psychology and ethics. Cost evaluation is required in design projects for EG 1003 Introduction to Engineering and Design. Senior projects emphasize time management and planning. EG 1001 Engineering and Technology Forum examines the impact of technology on society. EE 1012/CS 1012 Introduction to Computer Engineering introduces students to the field of computer engineering. Exceptional undergraduate students may do advanced study in two programs:

- The BS/MS Program (please refer to the section “Undergraduate Academic Requirements and Policies” section in the catalog).
- The summer junior-research internship program, in which undergraduates work with faculty on research projects.

Up-to-date information about program requirements, course offerings, senior project topics and research projects is available here from the Department of Electrical and Computer Engineering and from the Department of Computer Science and Engineering here.

**Undergraduate Degree Requirements**

The BS program in computer engineering gives students broad preparation for a career in computer engineering in any of its specialization and readies them for immediate employment in industry, business and government, or for further graduate education. The program is accredited by the Accreditation Board for Engineering and Technology (ABET).
The table at the end of this section outlining the Typical Course of Study for a BS shows a sample semester-by-semester program for students entering as freshmen in fall 2009 or later. The notes accompanying the table are an essential part of the table. Students are responsible for making themselves aware of changes made in this program after this catalog is published. Those changes are posted outside the department’s advising offices and on the department’s Web page. (Students who started their studies before fall 2009 should consult the department’s advisers and Web pages for program and course requirements applicable to them.)

Senior Design Project

The two-semester Senior Design Project allows students to focus on an application of computer engineering. In the first semester, students concentrate on hardware and/or software. They develop skills using specialized laboratory equipment and computer-design packages and are introduced to techniques for planning projects and making effective presentations. They also learn to balance design requirements such as performance, safety, reliability and cost effectiveness.

In the second and final semester, students design, build or simulate and test a device or system to meet prescribed engineering specifications. Informal and formal written and public oral presentations help prepare students for professional careers. Design-project students frequently work in groups or pairs to develop interaction skills essential to good engineering.

Graduation Requirements

The Institute requires a 2.0 GPA in all courses and specifies other general requirements in the section “Undergraduate Degree Requirements and Academic Policies,” which describes the core curriculum for all engineering majors, including placement procedures in writing, mathematics and programming; course credits by transfer and advanced placement; and credit by examination.

To graduate, students must (1) have a C-grade or better in CS 1114, CS 1124, CS 2134 and CS 2204 and in EE 2013 and EE 2024 and (2) have a technical GPA of 2.0 based on all courses prefixed EE, CS or EL. Seniors may elect graduate courses labeled EL 5XX3, but not CS 5XX3. To enroll in other graduate courses, student must meet required department GPA standards and adviser approval.

Students are expected to meet degree requirements in effect at the time when they first enrolled in a NYU-Poly program. Those requirements apply as long as a student remains in good standing and less than eight years have elapsed since entering the program. The period for unchanged requirements is proportionately less for a transfer student.

Good Standing, Probation and Disqualification

Students who fail to meet Institute GPA requirements or other conditions of adequate progress toward completing a degree are put on probation. (See the Undergraduate Academic Requirements and Policies” section in this catalog for more details.) Students on final probation may not register for courses in one semester until grades are available from their previous semester’s courses, and they are limited to a reduced number of credits per semester. Students who improve academic performance are removed from probation and returned to good standing. Continued poor academic performance can lead to final probation and, eventually, disqualification from the Institute. To remain in good standing in the undergraduate Computer Engineering Program, students must:

- Maintain, term-by-term and cumulatively, a technical GPA (based on EE/EL and CS Earn a C- or better in CS 1114, CS 1124 and CS 2204 and in EE 2013 and EE 2024; and
- Fulfill all course pre- and co-requisites.

Students who face difficulties, whether educational or personal, should consult their instructor or a departmental adviser at the earliest possible time. Students who do not meet program conditions are placed on departmental probation.

Probation conditions may require students to:
• Repeat courses, including courses in which they received transfer credits and courses in which they received a C grade or less at NYU-Poly;
• Specify their credit load and permissible withdrawals; and
• Take other remedial programs.

Students who fail to meet departmental probation requirements, fail three times to earn the required grade in any one course or do not conform to the University Code of Conduct are subject to disqualification from working toward a bachelor’s in computer engineering or taking further computer engineering courses. Actions taken depend on individual cases. Disqualified students may appeal in writing. Students also may apply for readmission after two terms (fall, spring or summer) have passed if they can demonstrate an improved chance of success.

Dual Undergraduate Majors

With departmental permission, students may earn a single bachelor’s degree in electrical and computer engineering. This degree requires a total 142 credits rather than the usual 128 required for individual bachelor’s degrees.

Senior Thesis

Undergraduate computer engineering students wishing to do a Senior Thesis (BS thesis) instead of Design Project (DP) must:

• Complete 6 total credits of Senior Thesis (EE 397);
• Complete EE 4001, “ECE Professional Development and Presentation”;
• Make a presentation to their thesis adviser, with attendance open to other students and faculty; and
• Bind their thesis according to university guidelines for MS and PhD theses.

Note: Such students need not register for Design Project I or Design Project II.

Before registering for Senior Thesis, the student must find a faculty member to serve as thesis adviser. In addition, students must have a 3.0 GPA in order to register for Senior Thesis instead of Design Project.

Additional notes:

• The Senior Thesis must be design oriented.
• The 6 credits of DP-1 and DP-2 are replaced by 6 credits of Senior Thesis (EE 397).
• Students are advised not to take all 6 credits of Senior Thesis during a single semester.

Senior Honor Students

Each spring, the Department of Electrical and Computer Engineering selects senior honors students with high GPAs who will complete their degree requirements in the following academic year. Such students are listed as honor students in that year’s commencement program and are given special permission to substitute courses in their senior year. Most often these students substitute more advanced graduate courses in place of usual requirements in the same study area. Transfer students are eligible for this designation after they complete half of the credits needed to satisfy NYU-Poly degree requirements (e.g., 64 of 128 total credits).

Transfer Students

Transfer credits for courses taken at other schools are based on evaluation of content and level. Students completing the same program at another school, but in different years, may receive different amounts of transfer credits. Students should consult with a computer engineering undergraduate adviser for current information.
Transfer students must arrive and present their records for evaluation at least one week before the regular registration period of their first semester at NYU-Poly. Transfer credits are awarded only for courses completed with C grades or better. Qualified students from two-year pre-engineering programs, such as those at liberal arts and community colleges, may fulfill the requirements for the BS in computer engineering in two additional years. Since pre-engineering programs vary, a prescribed program is not possible; consequently, students should consult with an NYU-Poly undergraduate adviser at the beginning of their pre-engineering program.

**Guidance for Undergraduate Students**

Instructors help students in their courses during hours posted on their doors or by appointment. Students taking project or thesis courses work closely with faculty project advisers. Computer engineering advisers in the undergraduate ECE office are available to advise on courses and program adjustments resulting from academic needs or personal problems. The Office of Special Services sponsors a peer-tutoring program. The Polytechnic Tutoring Center provides drop-in tutoring. Personalized career counseling is available at the Career Management Center. The Office of Special Services sponsors a peer-tutoring program. The Polytechnic Tutoring Center provides drop-in tutoring. Personalized career counseling is available at the Career Management Center. The EG 1001 Engineering and Technology Forum and EE 1012/CS 1012 Introduction to Computer Engineering introduce students to NYU-Poly and its curricula. Fellow students are an excellent source of advice on adjusting to the Institute environment and the demands of an engineering program. In addition to meeting students in class, students are urged to meet others who can offer experienced advice by joining clubs such as the student branches of the Institute for Electrical and Electronics Engineers (IEEE) and Association for Computing Machinery (ACM) professional societies or other technical, sport, religious and ethnic clubs.

Students are encouraged to meet with other students to form study groups. In doing so, they benefit both from explanations provided by others and by the deeper understanding they get when they explain a concept or technique to someone else.

**Undergraduate Advising**

Undergraduate advising information is available on the Department of Electrical and Computer Engineering’s website. Students should consult that page for further details on honors, probation, approved electives, projects, elective concentrations, course offerings, senior project topics and other interests. Curriculum and prerequisite changes, new courses, special sections and other last-minute announcements are also posted on the bulletin boards outside the Office of Electrical and Computer Engineering.

**Information**

All students are responsible for keeping informed about current procedures and regulations. Descriptions of undergraduate electrical engineering and computer science courses used in the Computer Engineering Program are in the program sections of this catalog.

**Graduate Program**

The Computer Engineering, M.S. educates professionals in computer engineering by offering graduate courses that meet the current and projected needs of industry and government in the metropolitan New York area and beyond. The program promotes computer engineering through basic and applied research by faculty and students in collaboration with industry and government agencies.

NYU-Poly’s MS program in computer engineering targets two important needs:

- The program leads to a terminal degree for students intending to round out their education and seek employment.
- The program provides the tools and background to carry out self-directed research for students planning a PhD. Outstanding students should apply for financial aid, including research fellowships, teaching fellowships or partial tuition remission. Students who wish to continue graduate study toward a PhD in computer engineering may do so in the PhD in the Electrical Engineering Program.
The electrical engineering and computer science faculty’s research and teaching interests include computer networks, VLSI design and CAD, verification and testing of VLSI systems, embedded systems design and computer architecture. The MS in Computer Engineering focuses on the principles and concepts underlying the design and integration of computer hardware and software into components and systems.

Modern society’s need for sophisticated and efficient electronically controlled systems and devices is increasing exponentially. Advanced studies in computer engineering provide a needed bridge between the Institute and industry. The Department of Electrical and Computer Engineering develops and administers an exceptional academic and research program in computer engineering with strong focus on telecommunications, computer networks and microelectronics.

Goals and Objectives

The MS program in computer engineering prepares graduates to practice computer engineering at an advanced level. The program’s specific goals and objectives provide students with:

- Opportunities to specialize in primary subdisciplines of computer engineering (VLSI, High-Speed networking, etc.), or to achieve breadth across a number of the sub-disciplines;
- Analysis and design knowledge necessary to design general-purpose as well as specialized application-specific computer hardware;
- Knowledge and skills to design embedded software-hardware systems;
- Exposure to state-of-the-art computer engineering techniques and technologies such as new computer architectures and design styles; and
- A basis for continued lifelong learning in the profession.

Admission Requirements

Admission to the MS program requires a bachelor’s degree in computer engineering, electrical engineering or computer science from an accredited institution. Students not meeting these requirements are considered individually for admission and may be admitted after completion of courses to remove preparation deficiencies, including courses in logic circuit design, state analysis and synthesis techniques, computer architecture, data structures and algorithms and C or C++ programming.

Minor

Computer Engineering Minor

Required Courses

Students may obtain a minor in Computer engineering by taking the following courses.

EE 2013 Fundamentals of Electric Circuits I

3 Credits This course covers Passive DC circuit elements, Kirchoff ’s laws, electric power calculations, analysis of DC circuits, Nodal and Loop analysis techniques, voltage and current division, Thevenin’s and Norton’s theorems, and source-free and forced responses of RL, RC and RLC circuits. A minimum of C- is required to take other EE courses.

Corequisite(s): MA 2012, MA 2132 and PH 2023.
EE 2024 Fundamentals of Electric Circuits II

4 Credits The course continues EE 2013 and focuses on sinusoidal steady-state response; complex voltage and current and the phasor concept; impedance and admittance; average, apparent and reactive power; polyphase circuits; node and mesh analysis for AC circuits; use of MATLAB for solving circuit equations; frequency response; parallel and series resonance; and operational amplifier circuits. A laboratory meets on alternate weeks. A minimum of C- is required to take other EE courses.

Prerequisite(s): EE 2013 with C or better grade.
Note: ABET competencies a, b, c, d, e, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 1 | Weekly Recitation Hours: 1

CS 2204 Digital Logic and State Machine Design

4 Credits This course covers combinational and sequential digital circuits. Topics: Introduction to digital systems. Number systems and binary arithmetic. Switching algebra and logic design. Error detection and correction. Combinational integrated circuits, including adders. Timing hazards. Sequential circuits, flip-flops, state diagrams and synchronous machine synthesis. Programmable Logic Devices, PLA, PAL and FPGA. Finite-state machine design. Memory elements. Weekly laboratory experiments introduce digital system design on FPGAs. A grade of C- or better is required of undergraduate computer-engineering majors.

Prerequisite(s): CS 1114 (C- or better) or CS 1133 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EE 4144 Introduction to Embedded Systems Design

4 Credits The course covers architecture and operation of embedded microprocessors; microprocessor assembly language programming; address decoding; interfacing to static and dynamic RAM; Serial I/O, Parallel I/O, analog I/O; interrupts and direct memory access; A/D and D/A converters; sensors; microcontrollers. Alternate-week laboratory. Objectives: to provide foundations of embedded systems design and analysis techniques; expose students to system level design; and teach integration of analog sensors with digital embedded microprocessors.

Prerequisite(s): CS 2204 (C- or better) and EE 2024 (C- or better).
Note: ABET competencies: a, c, d, e, g, j, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

Total credits: 15

Note:
For students not earning the BS degree in computer science, EE 4144 may be replaced by CS 2214 Computer Architecture. A GPA of 2.0 or better in the entire minor is required. Students must take a minimum of 8 credits at NYU-Poly. Students for whom CS 1133/CS 1114 is not required for major should note that CS 1133/CS 1114 is a prerequisite for CS 2204. The minor in computer engineering is not open to students earning the BS degree in electrical engineering.

**Bachelors**

**Computer Engineering, B.S.**

Typical Course of Study for the Bachelor of Science in Computer Engineering

**Freshman Year**

**Fall Semester: 15 Credits**

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

*Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour  
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

*Corequisite(s): EG 1 Examination Hour  
Note: Weekly laboratory required.*

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0*
EG 1003 Introduction to Engineering and Design

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

EG 1001 Engineering and Technology Forum

1 Credit In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students' educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

Spring Semester: 16 Credits

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics
This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

**Prerequisite(s):** MA 1024 or an approved equivalent. **Corequisite(s):** MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

### CS 1124 Object Oriented Programming

**4 Credits** This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

**Prerequisite(s):** CS 1114 (C- or better). **Corequisite(s):** EG 1 Examination Hour

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

### EE 1012 Introduction to Computer Engineering

**2 Credits** This course helps students to understand computer engineering as a balance among hardware, software, applications and theory, the notion of abstraction, computer layers and how they relate to various aspects of computer engineering, implementation of abstract and physical computer layers: Number systems, digital logic, basic processor structure, instruction set architecture, machine languages, assembly languages and high-level programming in C. Other computer concepts, including compilers, operating systems and algorithms, are presented, along with the simulator concept and its usage for understanding computer design, testing and analysis. Experts present special topics in the area. Also discussed are invention, innovation, entrepreneurship and ethics in these topics and in Computer Engineering.

*Also listed under:* Also listed under CS 1012.  
*Note: ABET competencies e, h, j.*

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

### CS 1012 Introduction to Computer Engineering

**2 Credits** This course helps students to understand computer engineering as a balance among hardware, software, applications and theory, the notion of abstraction, computer layers and how they related to various aspects of computer engineering, implementation of abstract and physical computer layers: Number systems, digital logic, basic processor structure, instruction set architecture, machine learning, assembly languages and high-level programming in C. Other computer concepts, including compilers, operating systems, and algorithms presented, along with the simulator concept and its usage for understanding computer design, testing and analysis. Experts present special topics in the area. Also discussed are invention, innovation, entrepreneurship and ethics in these topics and in Computer Engineering.

*Also listed under:* EE 1012.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Sophomore Year

Fall Semester: 17.5 Credits

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I
0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CS 2134 Data Structures and Algorithms

4 Credits This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 2013 Fundamentals of Electric Circuits I

3 Credits This course covers Passive DC circuit elements, Kirchoff’s laws, electric power calculations, analysis of DC circuits, Nodal and Loop analysis techniques, voltage and current division, Thevenin’s and Norton’s theorems, and source-free and forced responses of RL, RC and RLC circuits. A minimum of C- is required to take other EE courses.

Corequisite(s): MA 2012, MA 2132 and PH 2023.
Note: ABET competencies a, c, e, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1
• Humanities and Social Sciences Elective Course 3 Credits

Spring Semester: 15.5 Credits

MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2033. Corequisite(s): PH 2031 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

CS 2204 Digital Logic and State Machine Design

4 Credits This course covers combinational and sequential digital circuits. Topics: Introduction to digital systems. Number systems and binary arithmetic. Switching algebra and logic design. Error detection and correction. Combinational integrated circuits, including adders. Timing hazards. Sequential circuits, flip-flops, state diagrams and synchronous machine synthesis. Programmable Logic Devices, PLA, PAL and FPGA. Finite-state machine design. Memory elements. Weekly laboratory experiments introduce digital system design on FPGAs. A grade of C- or better is required of undergraduate computer-engineering majors.

Prerequisite(s): CS 1114 (C- or better) or CS 1133 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EE 2024 Fundamentals of Electric Circuits II

4 Credits The course continues EE 2013 and focuses on sinusoidal steady-state response; complex voltage and current and the phasor concept; impedance and admittance; average, apparent and reactive power; polyphase circuits; node and mesh analysis for AC circuits; use of MATLAB for solving circuit equations; frequency response; parallel and series resonance; and operational amplifier circuits. A laboratory meets on alternate weeks. A minimum of C- is required to take other EE courses.

Prerequisite(s): EE 2013 with C or better grade.
Note: ABET competencies a, b, c, d, e, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 1 | Weekly Recitation Hours: 1

Junior Year
Fall Semester: 15 Credits

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 3114 Fundamentals of Electronics I

4 Credits This course focuses on circuit models and amplifier frequency response, op-amps, difference amplifier, voltage-to-current converter, slew rate, full-power bandwidth, common-mode rejection, frequency response of closed-loop amplifier, gain-bandwidth product rule, diodes, limiters, clamps and semiconductor physics. Other topics include Bipolar Junction Transistors; small-signal models, cut-off, saturation and active regions; common emitter, common base and emitter- follower amplifier configurations; Field-Effect Transistors (MOSFET and JFET); biasing; small-signal models; common-source and common gate amplifiers; and integrated circuit MOS amplifiers. The alternate-week laboratory experiments on OP-AMP applications, BJT biasing, large signal operation and FET characteristics. The course studies design and analysis of operational amplifiers; small-signal bipolar junction transistor and field-effect transistor amplifiers; diode circuits; differential pair amplifiers and semiconductor device- physics fundamentals.

Prerequisite(s): EE 2024 (C- or better) and PH 2023.
Note: ABET competencies a, b, c, e, k.
Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 1

CS 2214 Computer Architecture and Organization

4 Credits This course covers a top/down approach to computer design. Topics: Computer architecture, introduction to assembly models and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2
Spring Semester: 17 Credits

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 136 Communication Networks

3 Credits This course develops basic techniques used in communication networks. After protocol layering is introduced, algorithms and protocols are discussed for use in each of the five layers: physical, data link, network, transport and application. Specific protocols such as TCP/IP, ATM, SS7 are included.

Prerequisite(s): junior status in electrical engineering, computer engineering, or computer science. Corequisite(s): for EE majors: MA 3012 and MA 3112; for CompE/CS majors: MA 2212 and MA 2222.
Note: ABET competencies: a, c, e, j, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 3193 Introduction to Very Large Scale Integrated Circuits

3 Credits The course offers an overview of integrated circuit-design process: planning, design, fabrication and testing; device physics: PN junction, MOSFET and Spice models; inverter static and dynamic behavior and power dissipation; interconnects: cross talk, variation and transistor sizing; logic gates and combinational logic networks; sequential machines and sequential system design; subsystem design: adders, multipliers, static memory (SRAM), dynamic memory (DRAM). Topics include floor planning, clock distribution, power distribution and signal integrity; Input/Output buffers, packaging and testing; IC design methodology and CAD tools; implementations: full custom, application-specific integrated circuit (ASIC), field programmable gate arrays (FPGA). The course provides foundations of VLSI design and custom VLSI design methodology and state-of-the-art CAD tools.

Prerequisite(s): CS 2204 (C- or better) and EE 3114.
Note: ABET competencies: a, c, e, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.
Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1
- Humanities and Social Sciences Elective Course 3 Credits

Senior Year

Fall Semester: 17 Credits

EE 4144 Introduction to Embedded Systems Design

4 Credits The course covers architecture and operation of embedded microprocessors; microprocessor assembly language programming; address decoding; interfacing to static and dynamic RAM; Serial I/O, Parallel I/O, analog I/O; interrupts and direct memory access; A/D and D/A converters; sensors; microcontrollers. Alternate-week laboratory. Objectives: to provide foundations of embedded systems design and analysis techniques; expose students to system level design; and teach integration of analog sensors with digital embedded microprocessors.

Prerequisite(s): CS 2204 (C- or better) and EE 2024 (C- or better).
Note: ABET competencies: a, c, d, e, g, j, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
- EE/CS 4XX3 Design Project I 3 Credits

EE 4001 ECE Professional Development and Presentation

1 Credits This course provides electrical and computer engineering students with concepts, theory, principles and experience in project management and project presentation. Students learn how to apply skills learned in engineering coursework to team projects in a professional environment.

Prerequisite(s): Junior or senior status or permission of the instructor.
Note: Restricted to Electrical and Computer Engineering majors. ABET competencies: a, e, f, g.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- EE/CS/EL Elective 3 Credits
- “Special” Elective 3 Credits
- Humanities and Social Sciences Elective Course 3 Credits

Spring Semester: 15 Credits

- EE/CS 4XX3 Design Project II 3 Credits
- EE/CS/EL Elective 3 Credits
- EE/CS/EL Elective 3 Credits
- Humanities and Social Sciences Elective Course 3 Credits
Humanities and Social Sciences Elective Course 3 Credits

Footnotes

Note: A GPA (Technical) of at least 2.0 is required in all EE, CS and EL courses.

1 Choice of humanities and social sciences electives must conform to the established requirements of the Technology, Culture and Society Department. After the first-year writing courses, students will need one writing intensive elective course (W).

2 Grades of at least C- are required in CS 1114, CS 1124, CS 2134, CS 2204, EE 2013 and EE 2024. C if repeated twice.

3 “Special” elective is any course that a student has the prerequisites for and cannot be used to satisfy humanities and social sciences requirements. For example, it can be a course in natural science, mathematics, engineering, management, finance, digital media, etc.

4 For transfer students and students changing major, CS 1012 Introduction to Computer Engineering is not required. EG 1001 Engineering and Technology Forum and EG 1003 Introduction to Engineering and Design may also be excused depending upon transfer credits.

Electrical and Computer Engineering (dual degree), B.S.

With departmental permission, students may earn a single bachelor’s degree in electrical and computer engineering. This degree requires a total 142 credits rather than the usual 128 required for individual bachelor’s degrees.

Typical Course of Study for the Bachelors of Science in Electrical and Computer Engineering (dual degree)

First Year

Fall Semester: 15 Credits

- EG 1001 Engineering and Technology Forum 1 Credit
- EG 1003 Introduction to Engineering and Design 3 Credits
- EW 1013 Writing the Essay 3 Credits
- CS 1114 Introduction to Programming and Problem Solving 4 Credits
- MA 1024 Calculus I 4 Credits

Spring Semester: 18 credits
EE 1012 Introduction to Computer Engineering

2 Credits This course helps students to understand computer engineering as a balance among hardware, software, applications and theory, the notion of abstraction, computer layers and how they relate to various aspects of computer engineering, implementation of abstract and physical computer layers: Number systems, digital logic, basic processor structure, instruction set architecture, machine languages, assembly languages and high-level programming in C. Other computer concepts, including compilers, operating systems and algorithms, are presented, along with the simulator concept and its usage for understanding computer design, testing and analysis. Experts present special topics in the area. Also discussed are invention, innovation, entrepreneurship and ethics in these topics and in Computer Engineering.

Also listed under: Also listed under CS 1012.
Note: ABET competencies e, h, j.

EE 1002 Introduction to Electrical Engineering

2 Credits This course introduces numerous Electrical Engineering subject areas, including power systems, power electronics, computer networking, computer processors, communications, feedback control, signal processing, and EM fields/waves. As appropriate for each area, the course introduces various devices, design and operational issues, design methodologies and algorithms. Also introduced are basic equations to model systems and algorithms to solve specific problems. Important technical developments and problems are discussed. Mathematical methods are introduced as needed. The course gives an overview of department courses. Faculty lecturers discuss research and industrial projects in which they have been involved. Assignments include computer simulations and investigations of different systems. Written reports based on articles from the IEEE Spectrum Magazine are assigned. The IEEE Code of Ethics and ethics-related readings from the IEEE literature are discussed.

Prerequisite(s): CS 1133 and MA 1024.
Note: ABET competencies: i, h.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

CS 1124 Object Oriented Programming
4 Credits This intermediate-level programming course teaches object-oriented programming in C++. Topics: Pointers, dynamic memory allocation and recursion. Classes and objects including constructors, destructors, methods (member functions) and data members. Access and the interface to relationships of classes including composition, association and inheritance. Polymorphism through function overloading operators. Inheritance and templates. The standard template library is used to introduce elementary data structures and their use. Grade of C- or better required of computer science and computer engineering majors. Weekly laboratory required.

Prerequisite(s): CS 1114 (C- or better). Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Second Year

Fall Semester: 17.5 credits

**CS 2134 Data Structures and Algorithms**

4 Credits
This course covers abstract data types and the implementation and use of standard data structures. Topics: Fundamental algorithms and the basics of algorithm analysis. A grade of C- or better is required of undergraduate computer science and computer-engineering majors.

Prerequisite(s): CS 1124 (C- or better) and MA 1024. Corequisite(s): MA 2312/MA 2322.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EE 2013 Fundamentals of Electric Circuits I**

3 Credits
This course covers Passive DC circuit elements, Kirchoff’s laws, electric power calculations, analysis of DC circuits, Nodal and Loop analysis techniques, voltage and current division, Thevenin’s and Norton’s theorems, and source-free and forced responses of RL, RC and RLC circuits. A minimum of C- is required to take other EE courses.

Corequisite(s): MA 2012, MA 2132 and PH 2023.
Note: ABET competencies a, c, e, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**MA 2012 Elements of Linear Algebra I**

2 Credits
This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

2 Credits
Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

- Humanities and Social Science Elective 3 Credits

Spring Semester: 18.5 Credits

CS 2204 Digital Logic and State Machine Design

4 Credits This course covers combinational and sequential digital circuits. Topics: Introduction to digital systems. Number systems and binary arithmetic. Switching algebra and logic design. Error detection and correction. Combinational integrated circuits, including adders. Timing hazards. Sequential circuits, flip-flops, state diagrams and synchronous machine synthesis. Programmable Logic Devices, PLA, PAL and FPGA. Finite-state machine design. Memory elements. Weekly laboratory experiments introduce digital system design on FPGAs. A grade of C- or better is required of undergraduate computer-engineering majors.

Prerequisite(s): CS 1114 (C- or better) or CS 1133 (C- or better).
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

EE 2024 Fundamentals of Electric Circuits II

4 Credits The course continues EE 2013 and focuses on sinusoidal steady-state response; complex voltage and current and the phasor concept; impedance and admittance; average, apparent and reactive power; polyphase circuits; node and mesh analysis for AC circuits; use of MATLAB for solving circuit equations; frequency response; parallel and series resonance; and operational amplifier circuits. A laboratory meets on alternate weeks. A minimum of C- is required to take other EE courses.

Prerequisite(s): EE 2013 with C or better grade.
Note: ABET competencies a, b, c, d, e, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 1 | Weekly Recitation Hours: 1

**MA 2112 Multivariable Calculus A**

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 2033 Waves, Optics and Thermodynamics**

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2031 Introductory Physics Laboratory II**

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
- Humanities and Social Science Elective 3 Credits

**MA 2122 Multivariable Calculus B**

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Third Year

Fall Semester: 19 Credits
EE 3114 Fundamentals of Electronics I

4 Credits This course focuses on circuit models and amplifier frequency response, op-amps, difference amplifier, voltage-to-current converter, slew rate, full-power bandwidth, common-mode rejection, frequency response of closed-loop amplifier, gain-bandwidth product rule, diodes, limiters, clamps and semiconductor physics. Other topics include Bipolar Junction Transistors; small-signal models, cut-off, saturation and active regions; common emitter, common base and emitter follower amplifier configurations; Field-Effect Transistors (MOSFET and JFET); biasing; small-signal models; common-source and common gate amplifiers; and integrated circuit MOS amplifiers. The alternate-week laboratory experiments on OP-AMP applications, BJT biasing, large signal operation and FET characteristics. The course studies design and analysis of operational amplifiers; small-signal bipolar junction transistor and field-effect transistor amplifiers; diode circuits; differential pair amplifiers and semiconductor device - physics fundamentals.

Prerequisite(s): EE 2024 (C- or better) and PH 2023.

Note: ABET competencies a, b, c, e, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 1

MA 3012 Introduction to Probability I

Prerequisite(s): MA 2112 or equivalent.

Note: Not open to students who have taken MA 2212.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3112 Complex Variables I

Prerequisite(s): MA 2122 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 3054 Signals and Systems

4 Credits This course centers on linear system theory for analog and digital systems; linearity, causality and time invariance; impulse response, convolution and stability; the Laplace, z- transforms and applications to Linear Time Invariant (LTI) systems; frequency response, analog and digital filter design. Topics also include Fourier Series, Fourier Transforms and the sampling theorem. Weekly computer-laboratory projects use analysis- and design-computer packages. The course establishes foundations of linear systems theory needed in future courses; use of math packages to solve problems and simulate systems; and analog and digital filter design.

Prerequisite(s): EE 2024 (C- or better), MA 2012 and MA 2132.

Note: ABET competencies a, b, c, e, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 1
CS 2214 Computer Architecture and Organization

4 Credits This course covers is a top/down approach to computer design. Topics: Computer architecture, introduction to assembly language programming and machine language set design. Computer organization, logical modules; CPU, memory and I/O units. Instruction cycles, the datapath and control unit. Hardwiring and microprogramming. The memory subsystem and timing. I/O interface, interrupts, programmed I/O and DMA. Introduction to pipelining and memory hierarchies. Fundamentals of computer networks. Weekly recitations support lecture topics and study homework assignments.

Prerequisite(s): CS 2204 (C- or better) for computer engineering majors; CS 2134 (C- or better) and MA 2312/MA 2322 for computer science majors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 2
- Humanities and Social Science Elective 3 Credits

Spring Semester: 18 Credits

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

CS 3224 Operating Systems

4 Credits This course studies the fundamental concepts and principles of operating systems. Batch, spooling and multiprogramming systems are introduced. The parts of an operating system are described in terms of their functions, structure and implementation. Basic policies for allocating resources are discussed.

Prerequisite(s): CS 2214 and CS 2134 (C- or better).
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 136 Communication Networks

3 Credits This course develops basic techniques used in communication networks. After protocol layering is introduced, algorithms and protocols are discussed for use in each of the five layers: physical, data link, network, transport and application. Specific protocols such as TCP/IP, ATM, SS7 are included.

Prerequisite(s): junior status in electrical engineering, computer engineering, or computer science. Corequisite(s): for EE majors: MA 3012 and MA 3112; for CompE/CS majors: MA 2212 and MA 2222.
Note: ABET competencies: a, c, e, j, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EE 3604 Electromagnetic Waves

4 Credits Electromagnetic wave propagation in free space and in dielectrics, starting from a consideration of distributed inductance and capacitance on transmission lines. Electromagnetic plane waves are obtained as a special case. Reflection and transmission at discontinuities are discussed for pulsed sources, while impedance transformation and matching are presented for harmonic time dependence. Snell’s law and the reflection and transmission coefficients at dielectric interfaces are derived for obliquely propagation plane waves. Guiding of waves by dielectrics and by metal waveguides is demonstrated. Alternate-week laboratory. Objectives: Establish foundations of electromagnetic wave theory applicable to antennas, transmissions lines and materials; increase appreciation for properties of materials through physical experiments.

Prerequisite(s): EE 2024 (C- or better) and MA 3112.
Note: ABET competencies: a, b, c, e, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
  • Humanities and Social Science Elective 3 Credits

Fourth Year

Fall Semester: 18 Credits

EE 4001 ECE Professional Development and Presentation

1 Credits This course provides electrical and computer engineering students with concepts, theory, principles and experience in project management and project presentation. Students learn how to apply skills learned in engineering coursework to team projects in a professional environment.

Prerequisite(s): Junior or senior status or permission of the instructor.
Note: Restricted to Electrical and Computer Engineering majors. ABET competencies: a, e, f, g.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EE 4144 Introduction to Embedded Systems Design

4 Credits The course covers architecture and operation of embedded microprocessors; microprocessor assembly language programming; address decoding; interfacing to static and dynamic RAM; Serial I/O, Parallel I/O, analog I/O; interrupts and direct memory access; A/D and D/A converters; sensors; microcontrollers. Alternate-week laboratory. Objectives: to provide foundations of embedded systems design and analysis techniques; expose students to system level design; and teach integration of analog sensors with digital embedded microprocessors.

Prerequisite(s): CS 2204 (C- or better) and EE 2024 (C- or better).
Note: ABET competencies: a, c, d, e, g, j, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
  • EE/CS 4XX3 Design Project I 3 Credits
EE/EL EE Sequence I 3 Credits
EE/EL/CS CompE Elective I 4 Credits
Humanities and Social Science Elective 3 Credits

Spring Semester: 18 Credits

EE 3193 Introduction to Very Large Scale Integrated Circuits

3 Credits The course offers an overview of integrated circuit-design process: planning, design, fabrication and testing; device physics: PN junction, MOSFET and Spice models; inverter static and dynamic behavior and power dissipation; interconnects: cross talk, variation and transistor sizing; logic gates and combinational logic networks; sequential machines and sequential system design; subsystem design: adders, multipliers, static memory (SRAM), dynamic memory (DRAM). Topics include floor planning, clock distribution, power distribution and signal integrity; Input/Output buffers, packaging and testing; IC design methodology and CAD tools; implementations: full custom, application-specific integrated circuit (ASIC), field programmable gate arrays (FPGA). The course provides foundations of VLSI design and custom VLSI design methodology and state-of-the-art CAD tools.

Prerequisite(s): CS 2204 (C- or better) and EE 3114.
Note: ABET competencies: a, c, e, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- EE/CS 4XX3 Design Project II 3 Credits
- EE/EL EE Sequence II 3 Credits
- EE/EL/CS CompE Elective II 3 Credits
- Humanities and Social Science Elective 3 Credits
- Special Elective 3 Credits

Note

Special elective can be a natural science, math, engineering, management, finance, digital media, etc. course.

Total Credits Required for the Degree: 142

Masters

Computer Engineering, M.S.

Degree Requirements
To satisfy the MS degree requirements, students must complete 30 credits as described below. Of these, at least 18 credits should be EL credits and at least 6 credits should be CS credits.

**Group 1 - Core Courses: 9 Credits**

(Choose 3 of the following)

**EL 5363 Principles of Communication Networks**

*3 Credits* This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

*Prerequisite(s): MA 3012 or instructor’s permission.*

*Note: Online version available.*

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**EL 5473 Introduction to VLSI System Design**

*3 Credits* This course covers CMOS processing technology, MOS transistor theory, static/dynamic circuit and logic design techniques, circuit performance estimation, standard cells and gate arrays, clocking strategies, input/output structures, data path, memory and control logic design. Advanced VLSI CAD tools are used for schematic capture, layout, timing analysis and simulations for functionality and performance.

*Prerequisite(s): Senior or graduate status, CS 2204 and EE 3114 or equivalent.*

*Note: Online version available.*

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**EL 5493 Advanced Hardware Design**

*3 Credits* This course shows how a hardware-description language (for example, VHDL) can be used for computer hardware modeling, logic synthesis, register-level synthesis and simulation. The resulting design with hundreds or thousands of gates is then ready to be downloaded to form FPGA chips or silicon cells. Programs used: QuickVHDL, modeling and simulation tools from Mentor Graphics or similar large-scale programs. A design project is required and students make a written and oral presentation.

*Prerequisite(s): Graduate status.*

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**CS 6133 Computer Architecture I**

*3 Credits* This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer-performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor
implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Group 2: 6-12 Credits

Two sequences in this group each containing two courses; one course in each sequence may be a core course in Group 1. Both sequences must be in EL or CS courses and at least one must be an EL sequence. Approved course sequences are detailed in the ECE Graduate Student Manual.

Group 3: 6-12 Credits

Electives may be chosen with adviser approval from graduate offerings in EL, CS and, occasionally, pertinent courses from other departments. With adviser approval, students may select other groups or individual courses if they relate to computer engineering.

Group 4: 3 Credits

Students must take a project (EL 9953) that relates to the computer engineering discipline and is adviser-approved.

Minimum total: 30 Credits

Thesis option:

A 6-credit thesis (EL 997x) may be selected and used to replace:

1. One elective from Group 3
2. The 3-credit project from Group 4

Note:

NYU-Poly requires a GPA of 3.0 in all graduate courses, except those used for the undergraduate degree. No more than 9 of 30 credits may be taken outside NYU-Poly. Also, such credits are not used in computing the GPA. An average of 3.0 is required in courses taken to satisfy groups 1 and 2 above. These courses must be taken at NYU-Poly. If some courses are excused because the student took them in an undergraduate program or received transfer credits, adviser-approved substitute courses are used to calculate this average. Overall, 30 credits are required for the degree. Students should consult the Department of Electrical and Computer Engineering Graduate Student Manual. The manual provides detailed rules and procedures, including student status, transfer credits, recommended electives and one-year sequences, current areas of research and disqualification for low grades.

Electrical Engineering
The Department of Electrical and Computer Engineering offers an Electrical Engineering Program for the degrees Bachelor of Science, Master of Science and Doctor of Philosophy.

**The Profession**

The rapidly growing profession of electrical engineering has evolved from its early beginnings in electric-power generation and distribution through the development of radio, television, control and materials to computers, telecommunications and health care. In the last century, electrical engineers have created advances in power distribution, computers and communications that have changed the world. Their inventions have made the world a smaller, safer place and allow for immediate reporting and images from distant places that make world events part of daily life.

While electrical engineering undergraduate and graduate students concentrate on areas of electrical science, graduates apply their training to diversified fields such as electronic design, bioengineering, city planning, astronautics, radio astronomy, system engineering, image processing, telemetry, the Internet, computer design, management and patent law. As students mature and realize their abilities, they may choose professional careers in engineering, government, sales or education.

The expertise of NYU-Poly’s electrical engineering faculty covers a wide range of fields. Principal areas of teaching and research are computer engineering, telecommunications, wireless communications, signal processing, systems and control engineering, power systems and energy conversion, electrooptics and electroacoustics, microwave engineering, plasma science and engineering, and microelectronic devices and systems.

Additional information about electrical engineering careers can be found via IEEE.

**Undergraduate Program**

The BS program in Electrical Engineering gives student a broad-based background in electrical engineering, preparing them for immediate employment in industry or government or for graduate study.

**Goals and Objectives**

The objectives of the Electrical Engineering Program are that graduates are expected to:

- Be engaged and advancing in their professional careers in a profession that utilizes their NYU-Poly degree, in Electrical Engineering or other career path, that include industry, academia, and governmental or non-governmental organizations.
- Be seeking continuous professional development and life-long learning through graduate school studies, continuing education credits and/or professional registration.

The BS program includes analysis and design courses in major electrical engineering areas that build on fundamental mathematics and science courses. Many courses include handson laboratory components. Undergraduates can choose from a variety of electives to provide depth and specialization, many in commercially viable areas such as local area networks, wireless communication and deregulated power systems.

Since most current engineering design is computer-facilitated, the department includes computer-aided design (CAD) programs in many undergraduate courses to emphasize possibilities for large-scale design, corrections for unmodeled complexities, trade-offs among performance criteria, and real-time simulations. A senior design project challenges each student to integrate analytical and design concepts from earlier courses to design a device or system to meet specified performance requirements.
The program recognizes that communication and interpersonal skills, developed in design-course team projects, are essential to a successful career in any profession. Students also must take writing intensive courses and elective courses in humanities and social sciences.

Students are taught by faculty familiar with current issues through sponsored-research programs, such as those coordinated by NYU Poly’s Center for Advanced Technology in Telecommunications (CATT), a World Wide Web lab, and many research grants awarded to individuals or groups of professors.

The Electrical Engineering Program keeps abreast of market changes through the CATT Industrial Affiliates Program and by hiring professors and part-time adjunct teachers with industrial experience, initiating frequent alumni contacts, reviewing professional journals and encouraging faculty to work in industry part time or while on sabbatical. Where possible, classroom work challenges students to apply their knowledge to current design situations. Students also apply broad technical knowledge to practical problems through interdepartmental cooperation. The curriculum employs senior projects to reflect Industry’s need for an engineering-system approach. Topics include control and robotics, advanced hardware design, imaging, wireless communications, power electronics and areas mentioned above. Engineering’s economic aspects are addressed by allowing undergraduates to choose electives, such as macro/micro economics, psychology, ethics and management process. Cost evaluation is required in the design projects for EG 1003 Introduction to Engineering and Design. Senior projects emphasize time management and planning.

Exceptional undergraduate students have the opportunity for advanced study in two programs: (1) the BS/MS Program (please refer to the Undergraduate Academic Requirements and Policies section of the catalog), and (2) the summer junior-research internship program, in which undergraduates work on research projects with graduate students and their advisers. Up-to-date information about program requirements, course offerings, senior-project topics and research projects is available from the Department of Electrical and Computer Engineering.

Undergraduate Degree Requirements

The undergraduate electrical engineering program prepares students broadly for a career in electrical engineering in any of its specializations and readies them for immediate employment in industry, business and government, entrepreneurial endeavors or for further graduate education. The program is accredited by the Accreditation Board for Engineering and Technology (ABET).

The Electrical Engineering, B.S. Typical Course of Study shows a typical semester-by-semester program for students entering as freshmen in fall 2009 or later. The notes are an essential part of the table. Students are responsible for making themselves aware of possible changes in this program after the publication of this catalog. Those changes are posted outside the department’s advising offices and on the department’s website. (Students who started their studies before fall 2009 should consult the previous edition of this catalog or the department’s website for program and course requirements applicable to them.)

Senior Design Project

In the two-semester senior Design Project, students focus on one aspect of electrical engineering. In the first semester, students develop skills using specialized laboratory equipment and computer-design packages, are introduced to techniques for planning projects and making effective presentations and learn to balance such design requirements as performance, safety, reliability and cost effectiveness. In the final semester, students design, build or simulate and test a device or system to meet prescribed engineering specifications.

Informal and formal written and public oral presentations help prepare students for professional careers. Design project students frequently work in groups or pairs to develop interaction skills essential to good engineering.

Graduation Requirements
The Institute requires a 2.0 GPA in all courses and specifies other general requirements in the section Undergraduate Academic Requirements and Policies. This section describes the core curriculum for all engineering majors, including placement procedures in writing, mathematics and programming, course credits by transfer and advanced placement and credit by examination.

To graduate, students must (1) have a C-grade or better in CS 1133, CS 2204, EE 2013, EE 2024 and EE 3054 and (2) have a technical GPA of 2.0 based on all courses prefixed EE, CS or EL. Seniors may elect graduate courses labeled EL 5XX3, but not CS 5XX3. To enroll in other graduate courses, seniors must have a 2.7 GPA or better in related courses and adviser approval; juniors must have a 3.0 GPA or better and adviser approval.

Students are expected to meet the degree requirements in place when they first enrolled in a NYU-Poly program. Those requirements apply as long as students remain in good standing and fewer than eight years have elapsed since they entered the program. The period for unchanged requirements is proportionately less for a transfer student. (Students who started their studies before fall 2009 should consult the department’s website for applicable program and course requirements.)

**Good Standing, Probation and Disqualification**

Students who fail to meet Institute GPA requirements or other conditions of adequate progress toward completing a degree are put on probation. (See the Undergraduate Academic Requirements and Policies section of this catalog for more details.) Students on final probation may not register for courses until grades are available from their previous semester’s courses, and they are limited to a reduced number of credits per semester. Students who improve their academic performance are removed from probation and returned to good standing. Continued poor academic performance can lead to final probation and, eventually, disqualification from the Institute.

To remain in good standing in the undergraduate Electrical Engineering Program, students must:

1. Maintain, term-by-term and cumulatively, a technical GPA (based on EE, EL and CS courses) and an Institute GPA of 2.0 or better;
2. Earn a C- or better in each of the four courses specified above; and
3. Fulfill all course pre- and co-requisites.

Students facing difficulties, educational or personal, should consult their instructor or a departmental adviser as soon as possible. Students who do not meet program conditions are placed on departmental probation. Probation conditions may require students to:

1. Repeat courses, including courses in which they received transfer credit and courses in which they received a C grade or less at NYU-Poly;
2. Specify their credit load and permissible withdrawals; and
3. Take other remedial programs.

Students who fail to meet departmental probation requirements, fail three times to earn the required grade in any one course or do not conform to the Institute Student Code of Practice are subject to disqualification from working toward a bachelor’s in electrical engineering or from taking further electrical engineering courses. Actions taken depend on individual cases. Disqualified students may appeal in writing. Students also may apply for readmission after two terms (fall, spring or summer) have passed if they can demonstrate an improved chance of success.

**Dual Undergraduate Majors**

With departmental permission, students may earn a single bachelor’s degree in electrical and computer engineering. This degree requires 142 credits rather than the usual 128 required for individual bachelor’s degrees.

**Transfer Students**
Transfer credits for courses taken at other schools are based on evaluation of content and level. Students completing the same program at another school, but in different years, may receive a different number of transfer credits. Students should consult an electrical engineering undergraduate adviser for current information.

Transfer students must arrive and present their records for evaluation at least one week before the regular registration period of their first semester at NYU-Poly. Transfer credits are awarded only for courses completed with C grades or better.

Qualified students from two-year preengineering programs, such as those at liberal-arts and community colleges, may fulfill the requirements for the BS in Electrical Engineering in two additional years. Since pre-engineering programs vary, a prescribed program is not possible; consequently, students should consult with a NYU-Poly undergraduate adviser at the beginning of their pre-engineering program.

Technology-program graduates may be able to fulfill the requirements for the BS in Electrical Engineering in two to three and a half years, depending on the scope and level of their previous education. Consult with an undergraduate adviser for details.

**Senior Thesis**

Undergraduate electrical engineering students wishing to do a Senior Thesis (BS thesis) instead of Design Project (DP) need not register for DP I or DP II, but they must:

1. Complete 6 total credits of Senior Thesis (EE 397);
2. Complete EE 4001 ECE Professional Development and Presentation;
3. Make a presentation to their thesis adviser that is open for other students and faculty to attend; and
4. Bind their thesis according to Institute guidelines for MS and PhD theses.

Before registering for Senior Thesis, the student must arrange for a faculty member to serve as thesis adviser. In addition, students must have a 3.0 GPA to register for Senior Thesis instead of Design Project.

Additional notes:

1. The Senior Thesis must be design-oriented.
2. The 6 credits of DP I and DP II are replaced by 6 credits of Senior Thesis (EE 397).
3. The department advises that the 6 credits of Senior Thesis not be all taken in a single semester.

**Senior Honors Students**

Each spring, the Department of Electrical and Computer Engineering selects senior honors students from among current juniors with high GPAs who will complete their degree requirements in the following academic year. Such students are listed as honor students in that year’s commencement program and are given special permission to substitute courses in their senior year. Most often these students substitute more advanced graduate courses in place of usual requirements in the same study area. Transfer students are eligible for this designation after they complete half of the credits needed to satisfy NYU-Poly degree requirements (e.g., 64 of 128 total credits).

**Guidance for Undergraduate Students**

Instructors provide help for their students during hours posted on their doors or by appointment. Students taking project or thesis courses work closely with faculty project advisers. Electrical engineering advisers in the undergraduate ECE office are glad to advise on courses and program adjustments that result from academic needs or personal problems.

The Office of Special Services sponsors a peer-tutoring program. The Polytechnic Tutoring Center (PTC) provides drop-in tutoring in selected courses. Personalized career counseling is available at the Career Management Center.
EG 1001 Engineering and Technology Forum, and EE 1002 Introduction to Electrical Engineering, introduce students to technology in society and to the Institute’s curriculum for electrical engineering. Fellow students can offer excellent advice on how to adjust to the Institute environment and the engineering program and its demands. Outside class, students are urged to meet others who can give experienced advice by joining clubs such as the student branch of the Institute for Electrical and Electronics Engineers (IEEE) professional society, and other technical, sports, religious and ethnic clubs.

Students are advised to study and to do homework with other students. Everyone benefits and gains a deeper understanding when they explain a concept or technique to someone else.

Information

Undergraduate advising information is available on the Department of Electrical and Computer Engineering’s website. Students should consult that site for details on honors, probation, approved electives, projects, elective concentrations, course offerings and senior project topics. Curriculum and prerequisite changes, new courses, special sections and other last-minute announcements are also posted on bulletin boards outside the undergraduate and graduate Office of Electrical and Computer Engineering Advising. All students are responsible to stay informed about the latest procedures and regulations.

Graduate Programs

The Department of Electrical and Computer Engineering offers a graduate Electrical Engineering Program leading to graduate certificates and Master of Science, Master of Engineering and Doctor of Philosophy degrees as listed below.

Requirements for graduate degrees in electrical engineering are general. Each student may follow a program in any one of many fields, including those described below. For up-to-date information, students should refer to the Department of Electrical and Computer Engineering Graduate Student Manual. This publication, revised annually, is available from the department’s graduate office and on-line.

Outstanding students should apply for financial aid, including research assistantships, teaching assistantships or partial tuition remission.

Goals and Objectives

The Master of Science program in Electrical Engineering prepares graduates for a professional career as an entrepreneur, a practicing engineer in industry, business or government at an advanced level or to pursue the PhD degree in electrical engineering. Three core courses, two one-year sequences and electives provide breadth and depth across a number of electrical engineering subdisciplines.

The Doctor of Philosophy program in Electrical Engineering prepares graduates for a research career in electrical engineering and university-level teaching. The program provides students with strong fundamental knowledge in several electrical engineering disciplines, skills for independent research in a subdiscipline and the ability to prepare and defend a dissertation representing an original and significant contribution for publication in a recognized scientific or engineering journal.

Concentrations

Wireless Communications

Wireless communication has exploded in growth since cellular telephones were introduced. This growth has popularized other services such as wireless local area networks (WiFi), wireless wide area networks (WiMAX), Bluetooth and HomeRF. Major paradigm shifts from exclusive reliance on wired networks to an era of tetherless communications, and from a fixed-computing to
a mobile-computing environment are under way in the communications world. The merging of Internet and mobile communications is igniting unprecedented growth and an information-technologies revolution.

**Computer Engineering**

Computer Engineering deals with various systems, devices and chips for computing, control, security and communication purposes. Computer engineers design supercomputers, ubiquitous personal and portable computers, communication equipments security hardware, networking units, intelligent control modules and various embedded hardware-software devices.

**Telecommunications and Networking**

Telecommunications and networking manages systems such as telephone, television, radio transmission, radar, space communications and networks, including data networks, local area networks and the Internet. Program interests range from the design of components, such as switches and routers, to system and network design, performance analysis, modeling and protocols.

**Signal Processing**

Signal Processing is the theory and application of filtering, coding, transmitting, estimating, detecting, analyzing, recognizing, synthesizing, recording and reproducing signals by digital or analog devices or techniques. The term “signal” includes audio, video, speech, image, communication, geophysical, sonar, radar, medical, musical and other signals. Applications include: analyzing EKG and other biomedical signals for health monitoring; improving the quality of noisy, low-contrast X-ray images; digitally synthesizing the sound of musical instruments and creating new sounds; compressing music, images and video for faster transmission over the Internet and to make better use of limited memory in portable digital devices; detecting the position and velocity of objects in radar and sonar.

**Image and Video Processing**

This concentration focuses on the compression of image and video signals for efficient storage and transmission, and on basic image processing techniques such as contrast enhancement, deblurring, denoising and feature extraction. Applications include digital television, video streaming, medical imaging, digital library, and object recognition and tracking for surveillance.

**Systems and Control**

System engineers are concerned with modeling and predicting the behavior of large systems from knowledge of the component parts. Examples include air traffic control systems, health-care delivery systems, manufacturing systems, and systems to monitor and control pollution of the environment. Control engineers are concerned with all aspects of automatic regulation of system performance, which includes modeling of system behavior. Together with the system engineer, they are trained in the fields of automation and system theory. Typical examples of control systems are automatic guidance systems for aircraft and space vehicles, routing of packets in a telecommunication network, control of unmanned and robotic systems, electric motor control, and chemical process control.

**Electronics and VLSI**

The discipline involves designing and implementing circuits used in microcomputers, telecommunications, signal processing and control systems. Students learn to design such circuits with state-of-the-art computer facilities and design tools. These circuits are
fabricated with modern technologies such as CMOS, bipolar and GaAs. This discipline also involves the emerging area of nanoscale electronics, circuits and architectures and associated design tools.

**Fields and Waves**

Field and wave studies include electromagnetic and acoustic wave radiation and propagation under a variety of conditions, including non-linear, anisotropic and periodic media. Such studies include microwave waveguides and antennas, optical fibers, and integrated optics diffraction and scattering effects. Applications include radar, microwave and optical communications and wireless technology.

**Plasma and Atmospheric Physics**

This area centers on gas breakdown and ionization and the interaction of the resultant plasma with electromagnetic waves. These studies have applications in the propagation of high-power radio waves in the atmosphere and ionosphere.

**Power Systems and Energy Conversion**

Studies in power and energy include not only traditionally important generation, conversion and distribution of electrical power, but also modern topics such as power electronics, ion plasmas for the electrical energy generation and electromagnetic propulsion.

**Graduate Certificates**

The Department of Electrical and Computer Engineering offers the following Graduate Certificates, each requiring four courses (12 credits). A GPA of 3.0 or higher is required in the four courses to receive the certificate.

- Computer Engineering Graduate Certificate
- Image Processing Graduate Certificate
- Telecommunication Network Management Graduate Certificate
- Wireless Communication Graduate Certificate
- Power Electronics and Systems Graduate Certificate
- Power Systems Management Graduate Certificate

**Minor**

**Electrical Engineering Minor**

Students may obtain a minor in electrical engineering by taking 15 credits of EE prefixed courses. The courses may be any EE courses subject only to the prerequisite requirements. A grade of C- or better is required in EE 2013 and EE 2024 and a GPA of 2.0 or better in the entire minor is required.

A minimum of 8 credits in the minor must be taken at NYU-Poly. The Electrical Engineering minor is not open to Computer Engineering students.
Bachelors

Electrical Engineering, B.S.

Typical Course of Study for the Bachelor of Science in Electrical Engineering

Freshman Year

Fall Semester: 14 Credits

**MA 1024 Calculus I**

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1133 Engineering Problem Solving and Programming**

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.
EG 1001 Engineering and Technology Forum

1 Credit
In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits
This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

Spring Semester: 16 Credits

MA 1124 Calculus II

4 Credits
This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits
This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination
**CM 1004 General Chemistry for Engineers**

*4 Credits* This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

*Corequisite(s):* EG 1 Examination Hour

**Weekly Lecture Hours:** 3 | **Weekly Lab Hours:** 0 | **Weekly Recitation Hours:** 1

**EE 1002 Introduction to Electrical Engineering**

*2 Credits* This course introduces numerous Electrical Engineering subject areas, including power systems, power electronics, computer networking, computer processors, communications, feedback control, signal processing, and EM fields/waves. As appropriate for each area, the course introduces various devices, design and operational issues, design methodologies and algorithms. Also introduced are basic equations to model systems and algorithms to solve specific problems. Important technical developments and problems are discussed. Mathematical methods are introduced as needed. The course gives an overview of department courses. Faculty lecturers discuss research and industrial projects in which they have been involved. Assignments include computer simulations and investigations of different systems. Written reports based on articles from the IEEE Spectrum Magazine are assigned. The IEEE Code of Ethics and ethics-related readings from the IEEE literature are discussed.

*Prerequisite(s):* CS 1133 and MA 1024.

*Note: ABET competencies: i, h.*

**Weekly Lecture Hours:** 2 | **Weekly Lab Hours:** 0 | **Weekly Recitation Hours:** 0

**EW 1023 The Advanced College Essay**

*3 Credits* This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

*Prerequisite(s):* EW 1013.

**Sophomore Year**

**Fall Semester: 17.5 Credits**

**MA 2012 Elements of Linear Algebra I**
2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

EE 2013 Fundamentals of Electric Circuits I

3 Credits This course covers Passive DC circuit elements, Kirchoff ’s laws, electric power calculations, analysis of DC circuits, Nodal and Loop analysis techniques, voltage and current division, Thevenin’s and Norton’s theorems, and source-free and forced responses of RL, RC and RLC circuits. A minimum of C- is required to take other EE courses.

Corequisite(s): MA 2012, MA 2132 and PH 2023.
Note: ABET competencies a, c, e, k.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

CS 2204 Digital Logic and State Machine Design
This course covers combinational and sequential digital circuits. Topics: Introduction to digital systems, number systems and binary arithmetic, switching algebra and logic design, error detection and correction, combinational integrated circuits, including adders, timing hazards, sequential circuits, flip-flops, state diagrams and synchronous machine synthesis, programmable logic devices, PLA, PAL and FPGA. Finite-state machine design, memory elements. Weekly laboratory experiments introduce digital system design on FPGAs. A grade of C- or better is required of undergraduate computer-engineering majors.

Prerequisite(s): CS 1114 (C- or better) or CS 1133 (C- or better).

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

- Humanities and Social Sciences Course 3 Credits

Spring Semester: 15.5 Credits

**MA 2112 Multivariable Calculus A**

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2122 Multivariable Calculus B**

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 2033 Waves, Optics and Thermodynamics**

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics: temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2031 Introductory Physics Laboratory II**

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.
EE 2024 Fundamentals of Electric Circuits II

4 Credits The course continues EE 2013 and focuses on sinusoidal steady-state response; complex voltage and current and the phasor concept; impedance and admittance; average, apparent and reactive power; polyphase circuits; node and mesh analysis for AC circuits; use of MATLAB for solving circuit equations; frequency response; parallel and series resonance; and operational amplifier circuits. A laboratory meets on alternate weeks. A minimum of C- is required to take other EE courses.

Prerequisite(s): EE 2013 with C or better grade.
Note: ABET competencies a, b, c, d, e, k.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 1 | Weekly Recitation Hours: 1

CS 2164 Introduction to Programming in C

Prerequisite(s): EE major status and either CS 1133 or CS 1114. Corequisite(s): CS 2164 Lab.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

Junior Year

Fall Semester: 15 Credits

MA 3112 Complex Variables I

Prerequisite(s): MA 2122 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3012 Introduction to Probability I

**Prerequisite(s):** MA 2112 or equivalent.
*Note: Not open to students who have taken MA 2212.*

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### EE 3054 Signals and Systems

*4 Credits* This course centers on linear system theory for analog and digital systems; linearity, causality and time invariance; impulse response, convolution and stability; the Laplace, $z$-transforms and applications to Linear Time Invariant (LTI) systems; frequency response, analog and digital filter design. Topics also include Fourier Series, Fourier Transforms and the sampling theorem. Weekly computer-laboratory projects use analysis- and design-computer packages. The course establishes foundations of linear systems theory needed in future courses; use of math packages to solve problems and simulate systems; and analog and digital filter design.

**Prerequisite(s):** EE 2024 (C- or better), MA 2012 and MA 2132.
*Note: ABET competencies a, b, c, e, k.*

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 1

### EE 3114 Fundamentals of Electronics I

*4 Credits* This course focuses on circuit models and amplifier frequency response, op-amps, difference amplifier, voltage-to-current converter, slew rate, full-power bandwidth, common-mode rejection, frequency response of closed-loop amplifier, gain-bandwidth product rule, diodes, limiters, clamps and semiconductor physics. Other topics include Bipolar Junction Transistors; small-signal models, cut-off, saturation and active regions; common emitter, common base and emitter- follower amplifier configurations; Field-Effect Transistors (MOSFET and JFET); biasing; small-signal models; common-source and common gate amplifiers; and integrated circuit MOS amplifiers. The alternate-week laboratory experiments on OP-AMP applications, BJT biasing, large signal operation and FET characteristics. The course studies design and analysis of operational amplifiers; small-signal bipolar junction transistor and field-effect transistor amplifiers; diode circuits; differential pair amplifiers and semiconductor device- physics fundamentals.

**Prerequisite(s):** EE 2024 (C- or better) and PH 2023.
*Note: ABET competencies a, b, c, e, k.*

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 1
- Humanities and Social Sciences Course 3 Credits

### Spring Semester: 15.5 Credits

### EE 3604 Electromagnetic Waves

*4 Credits* Electromagnetic wave propagation in free space and in dielectrics, starting from a consideration of distributed inductance and capacitance on transmission lines. Electromagnetic plane waves are obtained as a special case. Reflection and transmission at discontinuities are discussed for pulsed sources, while impedance transformation and matching are presented for harmonic time dependence. Snell’s law and the reflection and transmission coefficients at dielectric interfaces are derived for obliquely propagation plane waves. Guiding of waves by dielectrics and by metal waveguides is demonstrated. Alternate-week laboratory. Objectives: Establish foundations of electromagnetic wave theory applicable to antennas, transmissions lines and
materials; increase appreciation for properties of materials through physical experiments.

Prerequisite(s): EE 2024 (C- or better) and MA 3112.
Note: ABET competencies: a, b, c, e, k.

Weekly Lecture Hours: 3.5 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0
- EE Restricted Elective 4 Credits
- EE Restricted Elective 4 Credits
- Humanities and Social Sciences Course 3 Credits

Senior Year

Fall Semester: 17 Credits

- EE 4XX3 Design Project I 3 Credits

EE 4001 ECE Professional Development and Presentation

1 Credits This course provides electrical and computer engineering students with concepts, theory, principles and experience in project management and project presentation. Students learn how to apply skills learned in engineering coursework to team projects in a professional environment.

Prerequisite(s): Junior or senior status or permission of the instructor.
Note: Restricted to Electrical and Computer Engineering majors. ABET competencies: a, e, f, g.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- EE Restricted Elective 4 Credits
- EE/EL Elective 3 Credits
- Humanities and Social Sciences Course 3 Credits
- Humanities and Social Sciences Course 3 Credits

Spring Semester: 18 Credits

- EE 4XX3 Design Project II 3 Credits
- EE/EL Elective 3 Credits
- EE/EL Elective 3 Credits
- EE/CS/EL Elective 3 Credits
- EE/CS/EL Elective 3 Credits
- Humanities and Social Sciences Course 3 Credits

Total credits required for the degree: 128
Footnotes

1 For transfer students and students changing major, EE 1002 is not required.

2 Choice of Humanities and Social Sciences courses must conform to university requirements.

3 The Restricted Electives must be 3 of 4 courses:
   - EE 3124 Fundamentals of Electronics II
   - EE 3824 Electric Energy Conversion Systems
   - EE 3404 Fundamentals of Communication Theory
   - EE 3064 Feedback Control

4 A grade of at least C- is required in CS 1133, CS 2204, EE 2013, EE 2024, and EE 3054.

5 One of the following courses can be used in place of an EE/EL elective:
   - MG 2204 Financial Accounting
   - FIN 2103 Creating and Understanding Financial Statements
   - EC 2524 Managerial Microeconomics (May not be used for Humanities and Social Sciences elective)

6 Three 4-credit electives may be used in place of four 3-credit electives.

7 The EE/EL and EE/EL/CS elective courses must contain at least one two-course sequence.

Graduate Certificate

Computer Engineering Graduate Certificate

Computer engineering is a rapidly growing profession. Computer engineers are working in exciting times with unlimited opportunities. For instance, computer engineers interact with and design large supercomputers and the ubiquitous personal and portable computers. Furthermore, computer engineers play key roles in networking computers with other computers and intelligent devices. They also concentrate on projects such as designing specialized computer hardware to reconstruct the human genome, monitoring and controlling industrial plants and the environment, computer graphics and robotics, and designing biomedical devices and computer networks. Finally, computer engineers design and develop hardware and embedded hardware-software systems. The graduate certificate in computer engineering is for working professionals who seek a more in-depth understanding of the field. The program consists of three required courses and one elective course.

Group 1:

Choose three from the following:

EL 5493 Advanced Hardware Design

3 Credits This course shows how a hardware-description language (for example, VHDL) can be used for computer hardware modeling, logic synthesis, register-level synthesis and simulation. The resulting design with hundreds or thousands of gates is then ready to be downloaded to form FPGA chips or silicon cells. Programs used: QuickVHDL, modeling and simulation tools from Mentor Graphics or similar large-scale programs. A design project is required and students make a written and oral presentation.
EL 5363 Principles of Communication Networks

3 Credits This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

Prerequisite(s): MA 3012 or instructor’s permission.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5473 Introduction to VLSI System Design

3 Credits This course covers CMOS processing technology, MOS transistor theory, static/dynamic circuit and logic design techniques, circuit performance estimation, standard cells and gate arrays, clocking strategies, input/output structures, data path, memory and control logic design. Advanced VLSI CAD tools are used for schematic capture, layout, timing analysis and simulations for functionality and performance.

Prerequisite(s): Senior or graduate status, CS 2204 and EE 3114 or equivalent.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6133 Computer Architecture I

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer- performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Group 2:

Choose one from the following or the unchosen one in Group one:

EL 5483 Real Time Embedded Systems
3 Credits This course provides an overview of the unique concepts and techniques needed to design and implement computer systems having real-time response requirements in an embedded environment. It contrasts the concepts and techniques of real time and embedded systems with those of more traditional computer systems. Topics include: Basic concepts of real time and embedded systems, hardware features, programming languages, real time operating systems, synchronization techniques, performance optimization and current trends in real time and embedded systems such as incorporating internet connectivity.

Prerequisite(s): Knowledge of C, Pascal or other programming language and a basic understanding of computer architecture.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6443 VLSI System and Architecture Design

3 Credits This course continues from EL 5473 and covers top-down VLSI design using VHDL including structural design, modeling, algorithmic and register level design, synthesis, prototyping and implementation using FPGAs and methods to design for test (DFT). This course provides a solid background and hands-on experiences with the CMOS VLSI design process in which custom design techniques (covered in EL 5473) are married with HDL synthesis to produce complex systems. Students complete a project covering design partitioning, placement and routing, automated synthesis and standard cell design and use. The course explores how these techniques are used in designing ASICs, System-on-Chips (SoC) and advanced microprocessors.

Prerequisite(s): EL 5473.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6413 Analog and High Frequency Amplifier Design

Prerequisite(s): Graduate student status or EE 3114 and EE 3124.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6433 Digital Integrated Circuit Design

Prerequisite(s): EL 6413.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6493 Design and Test of Digital Systems
3 Credits Logic simulation methods, structural hazards; Manufacturing test fundamentals, fault modeling and simulation, automatic test pattern generation algorithms; Enhancing testability of digital systems: Design for testability; Advanced testing techniques: Test data compaction and compression techniques; Integrated circuits vs System-on-A-Chip (SOC) design styles and their manufacturing test implications.

CS 6143 Computer Architecture II

3 Credits This course covers high-speed computer design. Topics: Uni-processor computer architectures that exploit parallelism, advanced pipelining, superscalar, VLIW, vector processors. Parallel processing: Interconnection structures, MIMD and SIMD systems. Other selected parallel computing topics, such as parallel algorithms, PRAM machines and multicore processing.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6183 Fault-Tolerant Computers

3 Credits This course introduces a variety of hardware and software techniques to design and model fault-tolerant computers. Topics include coding techniques (Hamming, SECSED, SECDED, etc.); majority voting schemes (TMR); software redundancy (Nversion programming); software-recovery schemes; network reliability design and estimation. The course introduces probabilistic methods for reliability modeling. Other topics: Examples from space fault tolerant systems, networks, commercial nonstop systems (TANDEM and STRATUS), RAID memory systems. Fault-tolerant modeling tools such as HARP, SHURE and SHARPE.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Certificate Coordinator:

E-mail: rkarri@poly.edu.

Image Processing Graduate Certificate

Image processing covers the fundamental technology behind applications such as digital television; medical imaging and teleradiology; video streaming and conferencing overwireless and wireless networks, multimedia database and digital library. All applications use digital image enhancement, filtering, analysis and compression techniques. This certificate is for working professionals who seek an in-depth understanding of image processing and communication technology. The program consists of three required courses and one elective course.

Required Courses:

EL 5123 Image Processing

3 Credits The course focuses on image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and
spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. Students also learn to implement selected imaging processing algorithms in MATLAB or C-language.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: BE 6223.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6123 Video Processing

3 Credits This course covers Fourier analysis of video signals, properties of the human visual system, video signal sampling and sampling rate conversion, motion modeling and estimation, video compression techniques and standards, stereo video processing and compression, error control in networked video applications, analog and digital video systems. Students will learn to implement selected algorithms in MATLAB or C-language. A course-project is required.

Prerequisite(s): EL 5123 or EL 5143 and EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6643 Computer Vision and Scene Analysis

3 Credits An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.

Prerequisite(s): Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Elective Courses:

Choose one from the following:

EL 5823 Medical Imaging I

3 Credits This course introduces the physics, instrumentation and signal processing methods used in X-ray imaging (projection radiography), X-ray computed tomography, nuclear medicine (SPECT/PET), ultrasound imaging, magnetic resonance imaging and optical imaging. Co-listed with BE 6203

Prerequisite(s): Undergraduate level courses in multivariable calculus (MA 2112, MA 2122), physics (PH 2033), probability (MA 3012), signals and systems (EE 3054). Students who do not have prior courses in signals ans systems must take EL/6113/BE6403 SIGNALS, SYSTEMS AND TRANSFORMS as a prerequisite or must obtain instructor's approval; EL5123/BE6223 IMAGE PROCESSING is also recommended but not required.
Also listed under: BE 6203.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6183 Digital Signal Processing Laboratory
3 Credits This course includes hands-on experience with a set of laboratory experiments, lectures and projects relating to real-time digital signal processing (DSP) using a DSP microprocessor. Students gain experience in the implementation of common algorithms used in a variety of applications and learn tools and functions important for the design of DSP-based systems. Students are required to complete a project and give an oral presentation. This course is suitable for students interested in DSP and Embedded Systems.

Prerequisite(s): EL 6113 or equivalent, C/C++.
Also listed under: BE 6483.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

EL 6113 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: BE 6403.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6303 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: BE 6453.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6313 Stochastic Processes

Prerequisite(s): EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 7133 Digital Signal Processing**

Prerequisite(s): EL 6113 or equivalent.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 7163 Wavelet Transforms and Filter Banks**

3 Credits Orthogonal and biorthogonal wavelet bases on the real line. Scaling functions and the dilation equation. Construction of Daubechies wavelet bases. Mallat’s algorithm. Digital filter banks and the discrete wavelet transform. Two-dimensional wavelet transform and applications to image processing. Wavelet-based noise reduction. Lattice and lifting structures for implementation of filter banks. Expansive (over-complete) transforms. Additional applications. Students are required to complete a project and give an oral presentation. Regular computer-based exercises are given.

Prerequisite(s): EL 7133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 9953 Advanced Projects I**

3 Credits This course requires a student to conduct a theoretical and/or experimental project in a research area in electrical and computer engineering. The project is chosen based on the student’s specialized interest and preparation and is guided by a faculty member who is expert in the chosen subject. Oral presentation or a written report is required at the adviser’s discretion. A student must secure a project adviser before registration.

Prerequisite(s): Degree status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Certificate Coordination**

Professor Yao Wang, Tel: 718-260-3469,
E-mail: yao@poly.edu.
Power Electronics and Systems Graduate Certificate

The Certificate in Power Electronics and Systems prepares students for engineering careers in a broad range of companies: from small manufacturers of electronic power equipment and defense contractors to large electric utilities and multi-national power equipment companies. The power range of covered equipment and systems is from milliwatts to gigawatts. This certificate could be a part of MS EE degree at NYU-Poly. The EL 5613 course is a core course in both programs.

Required Courses:

EL 5613 Introduction to Electric Power Systems

3 Credits The course focuses on basic concepts in electric power systems. Topics: single-and-three-phase circuits, power triangle; transmission lines parameters: resistance, inductance, capacitance, transformers and generators; lumped component piequivalent circuit representation; perunit normalization; symmetrical phase components; load-flow program.

Prerequisite(s): EE 2024 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5673 Electronic Power Supplies

Prerequisite(s): EE 3824 or equivalent.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Elective Courses:

Choose two from the following:

EL 5663 Physics of Alternative Energy

3 Credits This course concentrates on non-petroleum sources of energy include photovoltaic cells, photocatalytic generators of hydrogen from water and nuclear fusion reactors. Topics: advanced physics of these emerging technical areas are introduced in this course. Semiconductor junctions, optical absorption in semiconductors, photovoltaic effect. Energy conversion efficiency of the silicon solar cell. Single crystal, polycrystal and thin film types of solar cells. Excitons in bulk and in confined geometries. Excitons in energy transport within an absorbing structure. Methods of making photocatalytic surfaces and structures for water splitting. Conditions for nuclear fusion. Plasmas and plasma compression. The toroidal chamber with magnetic coils as it appears in recent designs. Nuclear fusion by laser compression (inertial fusion). Small-scale exploratory approaches to fusion based on liquid compression and electric field ionization of deuterium gas.
EL 5683 Electric Drives Characteristics and Controls

3 Credits The course centers on conversion of load (resistive) torque, inertia, mass and force to a rotating shaft; acceleration and deceleration times; motor power-rating selection; thermal consideration at different duty cycles; load diagram construction; four-quadrant speed control operation for DC and AC motors; Worked examples.

Prerequisite(s): EE 3824 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6603 Power Electronics

3 Credits The course centers on principles of thyristor devices, GTOs, MOSFETs, IGBTs; dynamic characteristics of DC/DC converters; forced commutation circuits; switched-mode power supplies; full-wave and half-wave rectifiers; phase controlled converters; effect of the load characteristics; pulse-width modulated inverters.

Prerequisite(s): Graduate status and EE 3824 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6623 Power Systems Economics and Planning

3 Credits Power-system economics: revenue requirements, load duration and reserve requirements. Load forecasting: econometric methods. Optimal expansion planning and methodologies: optimal generation expansion computer modeling. Decision analysis techniques. Deregulation of electric power industry.

Prerequisite(s): Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6633 Transients, Surges and Faults in Power Systems

3 Credits Analysis of lumped-circuit, normal and abnormal transients in power equipment and systems. Short-circuit fault analysis and transient recovery of three-phase circuits. Analysis of traveling-wave surges on transmission lines, windings and integrated systems.

Prerequisite(s): Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6643 Relay Fault Protection

3 Credits Protective relay functions and classification. Electromechanical relay types, operating principles and basic characteristics. Communication channels for relaying. Current and voltage transformers, transducers. Protection of busses, transformers, generators, motors and other station equipment by the zone protection method. Distribution and transmission line relaying systems. Relay setting calculations. Primary and backup protection, application and philosophy with applied relay
engineering examples.

**Prerequisite(s):** Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6653 Power System Stability**

*3 Credits* The course introduces power-system dynamics: mathematical modeling of prime movers, power plants, synchronous machines, field exciters transmission lines, relay loads and stabilizers.

**Prerequisite(s):** Graduate status, EE 3824 and EL 5613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6663 Distributed Generation Systems**

*3 Credits* Benefits and limitations and classification of small generating systems; principles of operation and electrical equivalent circuits of fuel cells, solar cells, micro-turbines, reciprocating engines, wind turbines and gas turbines; fault conditions; reactive power support; power quality issues.

**Prerequisite(s):** EE 3824 and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6683 Adjustable Speed Drives**

*3 Credits* Engineers universally recognize that electric drives offer enormous potential for energy conservation. Factory automation, transportation (all-electric and hybrid-electric vehicles) and a trend to replace hydraulic drives by electric ones has driven interest among employers and students for education based on solid theoretical foundations. The course requires only a basic undergraduate preparation in circuits, electromagnetics and energy. Advanced topics of special electric machinery and control methods are introduced on in-time basis. This course complements EL 5683, which covers electromechanical aspects of electric drives, and EL 6603, which covers AC-DC and DC-AC conversion for drives and utility applications.

**Prerequisite(s):** Graduate status and EE 3824 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 96X3 Selected Topics in Power Engineering (X=1, 2,...9)**

*3 Credits* The course looks at topics of current interest in electric power engineering. (See departmental mailing for detailed description of each particular offering.

**Prerequisite(s):** Specified when offered.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Certificate Coordinator:**

Professor Dariusz Czarkowski, Tel: 718-260-3256,
E-mail: dcz@pl.poly.edu.
Power Systems Management Graduate Certificate

This certificate is for engineers who seek to enhance their power-industry knowledge. Students learn to manage complex utility projects, offer inventive solutions to old and new problems, and provide understanding of the power-industry economics. The certificate is for students who work as power-industry professionals or those who seek to do so. The program is also for those who want to learn more about power-systems deployment and acquisition, specification and planning.

Required Courses:

**EL 5613 Introduction to Electric Power Systems**

*3 Credits* The course focuses on basic concepts in electric power systems. Topics: single-and-three-phase circuits, power triangle; transmission lines parameters: resistance, inductance, capacitance, transformers and generators; lumpedcomponent piequivalent circuit representation; perunit normalization; symmetrical phase components; load-flow program.

Prerequisite(s): EE 2024 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8203 Project Management**

*3 Credits* This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Elective Courses:

Choose two from the following:

**EL 6623 Power Systems Economics and Planning**

*3 Credits* Power-system economics: revenue requirements, load duration and reserve requirements. Load forecasting: econometric methods. Optimal expansion planning and methodologies: optimal generation expansion computer modeling. Decision analysis techniques. Deregulation of electric power industry.

Prerequisite(s): Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8273 Contracts and Specifications**
This course covers principles of contract law as applied to the construction industry and legal problems in preparing and administering construction contracts.

Also listed under: CE 8273
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- EL 9653 Special topics in Power Engineering: Transmission and Distribution Systems 3 Credits

Certificate Coordinator:

Professor Francisco De Leon, Tel: 718-260-3961,
E-mail: fdeleon@poly.edu.

Telecommunication Network Management Graduate Certificate

The explosive growth of data networks has created the need for effective network management. The widespread deployment of standards-based solutions (e.g., SNMP) is only a first step in facing the complexity of network management. A thorough knowledge of network protocols and network management standards is necessary for any practitioner. The program consists of four required courses. This certificate can be finished completely online.

Courses

**EL 5363 Principles of Communication Networks**

*3 Credits* This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

Prerequisite(s): MA 3012 or instructor’s permission.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5373 Internet Architecture and Protocols**

*3 Credits* This course introduces basic local area networking technologies and protocols in a set of lectures and laboratory experiments. Topics: link level protocols. Local area networks: CSMA/CD, Token Ring, IEEE standards and protocols. The Internet protocol suite: IP, ARP, RARP, ICMP, UDP and TCP. LAN Interconnection: bridges, routers and gateways. Application protocols: SNMP, FTP, SMTP and NFS.

Prerequisite(s): EL 5363 or EE 136.
Also listed under: EE 4173.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6843 Computer Networking

3 Credits This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6373 Local and Metropolitan Area Networks

3 Credits This course introduces students to fundamental design issues in wireless and wired local and metropolitan area networks, explains the state-of-the-art solutions proposed and deployed in the field by using latest standards and protocols as examples, and discusses trends in the wireless/wired LAN/MANs. Example wireless technologies covered include the IEEE 802 family of protocols, e.g., WiFi, WiMax and Bluetooth. Example wireline technologies include those associated with Ethernet and MAN technologies such as Resilient Packet Ring.

Prerequisite(s): EL 5363 or EE 136 or instructor's permission.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6813 Information, Security and Privacy

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless
security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Certificate Coordinator:

Professor Yong Liu, Tel: 718-260-3959,
E-mail: yongliu@poly.edu.

Wireless Communication Graduate Certificate

Wireless communication has experienced remarkable growth since cellular telephones were introduced. With FCC licensing of spectrum for Personal Communication Services (PCS)—and services such as wireless LANs, wireless Internet and wireless Personal Area Networks—the growth rate is expected to accelerate. To give electrical engineers the specific knowledge needed to work in this expanding market, NYU-Poly has structured a series of four graduate level courses that cover the knowledge needed for successful industry competition. The program comprises one required course and three recommended elective courses. This certificate can be finished completely online.

Required Course:

EL 6303 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: BE 6453.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Recommended Elective Courses (choose 3):
**EL 5013 Wireless Personal Communication Systems**

*3 Credits* The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference-limited communications, multiple access, radio resource management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

*Prerequisite(s):* EE 3404 or equivalent.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5023 Wireless Information Systems Laboratory I**

*3 Credits* This course includes hands-on experience with a combination of laboratory experiments, lectures and projects relating to spread spectrum code division multiple access (CDMA) wireless communication systems. Specific topics include pseudo-noise code generation, transmitters and receivers for direct sequence and frequency hopping systems, acquisition and tracking, CDMA wireless computer communications, UHF channel propagation characteristics including multipath time delay profiles and attenuation measurements, bit error rate measurements, phase locked loops and spectrum sharing with existing narrowband users.

*Prerequisite(s):* Graduate status or EE 3404.

*Also listed under:* EE 4183.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

**EL 5033 Wireless Information Systems Laboratory II**

*3 Credits* This course includes hands-on experience with a combination of laboratory experiments, lectures and projects relating to basic and advanced topics in wireless communications. Specific topics include mixers, IQ modulation, phase locked loops, receiver design, PN code acquisition, smart antennas and RFID.

*Prerequisite(s):* EL 5023.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

**EL 6013 Principles of Digital Communications: Modulation and Coding**

*Prerequisite(s):* EE 3404 and EL 6303.

*Note:* Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6023 Wireless Communications: Channel Modeling and Receiver Design**
3 Credits The course focuses on wireless communication channel models and practical techniques for mitigating transmission impairments. Topics: Channel Modeling Parameters: Path loss; Fading: long-term vs. short-term fading, flat vs. frequency selective fading and slow vs. fast fading; Multipath spread parameters: delay spread, angular spread and Doppler spread. Channel Modeling for Multiple Input and Multiple Output (MIMO) Systems. Channel Parameter Estimation: training sequence and blind approaches. Mitigation: Mitigation of path loss and fading: Diversity, handoff and power control; Mitigation of intersymbol interference: rake receiver and equalizer; Mitigation of time variation: pilot symbols and dynamic tracking. Processing Techniques: LS, zero forcing, MMSE, LMS, etc.

Prerequisite(s): Graduate status or EE 3404, MA 3012.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6033 Modern Wireless Communication Techniques and Systems

3 Credits The course covers Multiple Access and Multiplexing Techniques; Spread spectrum and Code division multiple access (CDMA) techniques: Direct sequence, Frequency hopping; Multicarrier Techniques: Orthogonal frequency division (OFDM) and Multicarrier CDMA (MC-CDMA); New Wireless Communication Systems: Ultra Wideband communications, Wireless Fidelity (Wi-Fi), Radio Frequency Identification (RFID), Bluetooth, etc.

Prerequisite(s): EE 3404 and EL 6303.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6063 Information Theory

Prerequisite(s): Graduate status and EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6073 Error Control Coding

3 Credits The course covers the following topics: The general theory of linear codes. Galois fields. Coding and error correction methods. Linear block codes. Convolutional codes. Parallel and serial concatenated codes. Iterative decoding algorithms. Low density parity check codes.

Prerequisite(s): EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6753 UHF Propagation for Wireless Systems

3 Credits The course examines UHF radio applications for cellular mobile radio telephones, wireless local area networks and personal communications networks, propagation and reflection of plane waves and spherical waves; antennas for transmitting and
receiving; path loss and link budgets; Huygens’ principle; Fresnel zone and diffraction of plane and spherical waves; mathematical models of UHF propagation over a flat earth, around buildings in cities and within buildings; influence of propagation on capacity of cellular systems.

Prerequisite(s): Graduate status and undergraduate electromagnetic course.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 7023 Space-Time Wireless Communications

3 Credits The course provides an introduction to Multiple-Input Multiple-Output (MIMO) wireless communication systems. MIMO system capacity, MIMO system design criteria. Spacetime block and trellis codes. Spatial multiplexing and receiver design. Applications to MIMO OFDM systems.

Prerequisite(s): EL 6303. Corequisite(s): EL 6013 or EL 6023.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 90X3 Selected Topics in Wireless Communication (X=1, 2, 9)

3 Credits This course covers selected topics of current interest in wireless communications. (See department for detailed description of each particular offering.)

Prerequisite(s): Specified when offered.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Certificate Coordinator:

Professor Frank Cassara, Tel: 631-755-4360,
E-mail: cassara@rama.poly.edu.

Masters

Electrical Engineering, M.S.

Requirements for the Master of Science

Entrance Requirements:

Admission to the Master of Science in Electrical Engineering Program requires a bachelor’s in electrical engineering from an accredited institution, with a superior undergraduate academic record and a GPA of 3.0 or above. Students who do not meet these requirements will be considered individually for admission and may be admitted upon completion of specific undergraduate courses to remove preparation deficiencies.
Applicants without a BS in Electrical Engineering—but who are otherwise sufficiently prepared for admission without undergraduate deficiencies—may be required to take specified undergraduate and introductory level graduate electrical engineering courses. Only graduate courses count toward the master’s degree.

A student with a BS in a field other than electrical engineering also may consider the departmental master’s programs in computer engineering, electrophysics, system engineering, telecommunication networks, or the Master of Engineering in Interdisciplinary Studies in Engineering program, described elsewhere in this catalog, or the several Graduate Certificate programs described here.

Degree Requirements

To obtain the MS in Electrical Engineering degree, students must complete a total of 30 credits of courses, as described below.

Group 1: 9 Credits

Core Courses
Three courses (3 credits each) from the following:

**EL 5373 Internet Architecture and Protocols**

3 Credits This course introduces basic local area networking technologies and protocols in a set of lectures and laboratory experiments. Topics: link level protocols. Local area networks: CSMA/CD, Token Ring, IEEE standards and protocols. The Internet protocol suite: IP, ARP, RARP, ICMP, UDP and TCP. LAN Interconnection: bridges, routers and gateways. Application protocols: SNMP, FTP, SMTP and NFS.

Prerequisite(s): EL 5363 or EE 136.
Also listed under: EE 4173.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5473 Introduction to VLSI System Design**

3 Credits This course covers CMOS processing technology, MOS transistor theory, static/dynamic circuit and logic design techniques, circuit performance estimation, standard cells and gate arrays, clocking strategies, input/output structures, data path, memory and control logic design. Advanced VLSI CAD tools are used for schematic capture, layout, timing analysis and simulations for functionality and performance.

Prerequisite(s): Senior or graduate status, CS 2204 and EE 3114 or equivalent.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5613 Introduction to Electric Power Systems**

3 Credits The course focuses on basic concepts in electric power systems. Topics: single-and-three-phase circuits, power triangle; transmission line parameters: resistance, inductance, capacitance, transformers and generators; lumpedcomponent piequivalent circuit representation; perunit normalization; symmetrical phase components; load-flow program.
Prerequisite(s): EE 2024 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6113 Signals, Systems and Transforms**

Prerequisite(s): Graduate status.
Also listed under: BE 6403.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6253 Linear Systems**

3 Credits Basic system concepts. Equations describing continuous and discrete-time linear systems. Time domain analysis, state variables, transition matrix and impulsive response. Transform methods. Time-variable systems. Controllability, observability and stability. SISO pole placement, observer design. Sampled data systems.

Prerequisite(s): Graduate status and EE 3054 or EL 5253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6303 Probability Theory**

Prerequisite(s): Graduate status and MA 3012.
Also listed under: BE 6453.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6413 Analog and High Frequency Amplifier Design**

Prerequisite(s): Graduate student status or EE 3114 and EE 3124.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6713 Electromagnetic Theory and Applications

3 Credits This course introduces Maxwell’s equations, wave equation, vector potentials, boundary conditions and Poynting vector. Time-harmonic fields and phasor approach are introduced. The properties of freely propagating plane waves in uniform and layered media are derived, as well as waves guided by structures, including various transmission lines, hollow waveguides and dielectric waveguides. A unified treatment of wave propagation is given with general theorems and examples drawn from microwaves, integrated circuits and optics.

Prerequisite(s): Graduate status and EE 3604.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

Core courses cover fundamental material and should be taken as early as possible in the course of study for the degree program. Students may take an advanced course subsequent to a core course in lieu of the core course, with approval from an ECE graduate adviser.

Group 2: 6-12 Credits

Two sequences, each containing two courses, where one course in each sequence may be a core course in Group 1. One sequence must include EL-prefixes courses, and another sequence may contain either EL or CS-prefixes courses. Approved course sequences are listed in the ECE Graduate Student Manual.

Group 3: 30 Credits

These are approved electives and may include up to 6 credits of graduate courses offered by any science, engineering or management department.

Out-of-department Courses:

At least 24 credits must be in EL prefixed courses. A 3-credit course in other science or engineering disciplines may be used to substitute an EL course upon approval by an ECE graduate adviser. Remaining credits can be from any graduate science, engineering or management courses.

Thesis, Project and Reading:
A master’s thesis (EL 997x, minimal 6 credits) or an MS project (EL 9953 or EL 9963, 3 credits each) or a reading course (EL 9933 or EL 9943, 3 credits each) may be included as part of the elective courses in group 3. Oral defense of the master’s thesis before at least three professors is required. Total credits for thesis, projects and readings should not exceed 9 credits within the 30 credits required for the MS degree. At most 3 credits can be taken for reading.

GPA Requirements:

An overall GPA of 3.0 in all NYU-Poly graduate courses is required. In addition, a 3.0 average is required in the combination of the five to seven courses taken to satisfy groups 1 and 2.

Transfer Credits:

The nine transfer credits allowed by NYU-Poly regulations can be applied only toward electives. Transfer credits may not be used to satisfy core or sequence course requirements.

Repition of Courses:

A student may register no more than three times for the same course, including registration for which a W was earned. A course will not count for degree credit if taken in violation of this rule. Students should consult the Department of Electrical and Computer Engineering Graduate Student Manual for detailed rules and procedures, including student status, recommended course sequences, recommended electives, current research areas, course repetition and disqualification for low grades. The manual announces degree requirement changes, if adopted by the faculty after this catalog is published.

Doctorate

Electrical Engineering, Ph.D.

Requirements for the Doctor of Philosophy

General: Graduate students who exhibit high scholastic proficiency and demonstrate an ability to conduct independent research may extend their goals toward the doctorate. The PhD is awarded to students who complete the studies and research program (described below) and prepare and defend a dissertation. The dissertation must represent an original, significant contribution, qualified for publication in a recognized scientific or engineering journal.

Admission to Programs: Entrance into the doctoral study and research program is contingent on a candidate’s passing the departmental qualifying examination and forming a guidance committee (both described below). Students entering the doctoral program at the baccalaureate level must meet the entrance requirement detailed above for the master’s program. Students entering at the master’s level for the PhD in Electrical Engineering are expected to have a master’s in electrical engineering. Students holding a NYU-Poly master’s degree in computer or systems engineering, electrophysics or telecommunications networks also can enter the program. Applicants with BS or MS in other disciplines may be admitted depending on academic background and record.

Qualifying Examinations: PhD qualifying examinations are offered twice a year. These examinations are divided into two sections: (1) a written examination requiring preparation through first-year graduate level courses in several areas related to the student’s principal interest and (2) an oral examination concentrating mainly on this principal area. Principal concentration areas are communications, signal processing, systems and control, electromagnetics, networks, computer and network architecture, and power electronics and systems.
Details on allowed subject areas, recommended background courses, sample examination questions and the precise format for the coming year are available in the department’s Graduate Office.

**Guidance Committee:** Upon passing the qualifying examination, PhD students must find a faculty member in their major interest area to serve as dissertation adviser. Students work with their dissertation advisers to find an adviser for a minor area outside of electrical engineering and a guidance committee of at least three faculty members. The dissertation adviser usually acts as chairman. At least one other guidance committee member must be in the student’s major research interest area; this member may be from outside of NYU-Poly.

The minor adviser may be a member of the guidance committee. Students must submit names of these guidance committee members to the Office of Graduate Programs for approval. The dissertation adviser approves the study program in the student’s major and the minor adviser approves the program of courses in the minor.

When the requirements for minor or major are completed, students should have the relevant adviser certify the completion in writing to the Office of Graduate Affairs, with copies to the Department of Electrical and Computer Engineering’s Graduate Office.

The guidance committee conducts the area examination and dissertation defense and approves the final dissertation.

**Course and Thesis Requirements:** A minimum of 75 credits of academic work beyond the bachelor’s degree, including a minimum of 21 credits of NYU-Poly dissertation research, is required. A minimum of 42 credits in formal courses (as distinct from independent study credits such as reading, project or thesis) are required. A student entering with a MS from a reputable graduate program may transfer 30 credits. PhD students are required to take a minimum of 9 credits of courses in a minor area outside of electrical engineering. The minor must be taken in an area that is both distinct from and yet consonant with the student’s major study area. Students work with thesis advisers to develop their major study program. The major program should constitute a coherent, in-depth study of the most advanced knowledge in the student’s area of concentration.

Average GPA among all courses must be 3.5 or above.

**Seminar Attendance:** PhD students are required to register for a 0-credit Research Seminars course (EL9900) for at least 4 semesters. Satisfactory grade is given only if the student attends more than 2/3 of the seminars offered in a semester.

**Area Examination:** In the area examination, the student reviews the prior research in the chosen dissertation topic and presents preliminary research results and additional research plan. The guidance committee evaluates the student’s performance and determines whether the student demonstrates the depth of knowledge and understanding necessary to carry out research in the chosen area. The examination should be taken early in the PhD program and may be in the form of an open seminar attended by other interested faculty and students.

**Submission of the Dissertation and Final Examination:** After completing the doctoral dissertation, candidates undergo oral-thesis defense. The guidance committee conducts the examination, but the defense is open to all faculty members and to invited persons. Dissertation copies should be made available to prospective examiners at a reasonable advance time. Students are advised to consult the Office of Research and PhD Programs regarding how to submit, reproduce and bind the final manuscript.

**Publication Requirement:** To be granted the PhD degree, a PhD candidate must have at least one accepted or submitted journal paper on the thesis-research subject.

### Electrophysics

**Program Director:** Nirod Das

NYU-Poly offers a program leading to a Master of Science in Electrophysics. Students entering the program typically have an undergraduate background in electrical engineering or physics, a strong interest in physical phenomena and/or applied mathematics and a desire to conduct research.

The Department of Electrical and Computer Engineering administers the Electrophysics Program.
The program comprises basic courses in wave propagation, electromagnetic theory, microwave circuits and electro-optics. Traditional areas of active research include propagation modeling for wireless communications, propagation and scattering of waves, electromagnetic theory, antennas, microwave circuits, plasmas and solid-state devices. Areas of modern optics covered include lasers and optical communications. Additional areas covered are nonlinear wave propagation, ultrasonic waves in solids and waves in the earth’s ionosphere. NYU-Poly’s electrophysics faculty has significantly contributed to each area cited above. Students are exposed to some of the most current technical developments in each area and can be guided in research at the forefront of these areas.

**Goals and Objectives**

The Master of Science program in Electrophysics prepares students to work at the interface between electrical engineering and physics, where new engineering applications of various physical phenomena are developed. Emphasis is on wave propagation, microwave circuits, electrics and plasmas. Students entering the program with an undergraduate degree in physics receive a view of engineering applications and requirement, as well as an advanced view of the physical processes of interest. Students interested in furthering their understanding of these topics may do so by continuing in the PhD program in Electrical Engineering.

Students in this program will gain a deep understanding of the basic physical principles in one or more of the following areas: (a) electromagnetic wave propagation, (b) microwave devices and circuits, (c) antennas and radiation and (d) lasers and electro-optics for communications. Students learn the engineering applications and performance measures of the physical principles in the different areas and are able to apply their knowledge to device and system design problems. For those interested in PhD-level studies, the MS in Electrophysics prepares them for independent research that advances the knowledge of engineering applications of physical principles.

**Electrophysics, M.S.**

**Requirements for the Master of Science**

The entrance requirements for a Master of Science in Electrophysics are a bachelor’s degree in engineering or science from an accredited institution, with a superior undergraduate record, including undergraduate courses in differential equations, electromagnetic theory, quantum and solid-state physics and linear systems. Students with deficiencies in these areas may be admitted if they take appropriate introductory courses to remedy these deficiencies. Outstanding students are advised to apply for financial aid in the form of research fellowships, teaching fellowships or partial tuition remission.

To satisfy the requirements for an MS in Electrophysics, students must complete 30 credits, as described below, and maintain a GPA equal to or greater than 3.0 in all graduate courses. In addition, a GPA of 3.0 is required in courses in Group 1 and Group 2, as indicated below.

**Group 1: 9 Credits**

**Core Courses**

Three courses (3 credits each) from the following:

**EL 5513 Electro-Optics I**
This course describes the phenomena of and introduces the analyzing techniques for wave propagation in optical systems. Topics include: Review of Maxwell equations; propagation of plane waves: polarization, reflection, refraction, interfaces and multilayers; Fourier optics and diffraction; Ray and Gaussian beams; Optical cavities; Guided optical beams, optical fibers and guiding layers; Dispersion and mode distortion in fibers.

Prerequisite(s): Graduate status, EE 3604 or equivalent.
Weekly Lecture Hours: 3  |  Weekly Lab Hours: 0  |  Weekly Recitation Hours: 0

EL 5733 RF and Microwave Systems Engineering

Prerequisite(s): Graduate status or EE 3604.
Weekly Lecture Hours: 3  |  Weekly Lab Hours: 0  |  Weekly Recitation Hours: 0

EL 5753 Introduction to Plasma Engineering

The course focuses on basic plasma concepts and applications; parameters describing the plasma; motion of charged particles in electromagnetic fields; effect of particle collisions on plasma transport: diffusion and mobilities. Plasmas as dielectric media; plasma dielectric response functions for collective plasma oscillations and for electromagnetic wave propagation in plasma. Plasmas for practical applications.

Prerequisite(s): Graduate status or EE 3604.
Weekly Lecture Hours: 3  |  Weekly Lab Hours: 0  |  Weekly Recitation Hours: 0

EL 6113 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: BE 6403.

Note: Online version available.
Weekly Lecture Hours: 3  |  Weekly Lab Hours: 0  |  Weekly Recitation Hours: 0

EL 6583 Fiber Optic Communications

This course deals with the operating principles of optical communications systems and fiber-optic communication technology. The main elements of systems are presented in block diagrams and discussed individually. The advantages and disadvantages and the applications of Fiber Optic Communications Systems are discussed. Topics include: overview of optical
communication systems, review of optics, review of analog and digital communications, the characteristics of optical fibers, optical waveguides, optical sources and transmitters, optical detectors and receivers, optical amplifiers, noise and detection, impairment in optical communication systems and optical network design issues. Upon completion of this course, students are familiar with the principles and technology of optical communication systems, and are able to design a simple point-to-point optical communications link, including bandwidth, loss, signal to noise ratio (S/N) and bit error rate considerations.

Prerequisite(s): Graduate status or EE 3604.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6713 Electromagnetic Theory and Applications

3 Credits This course introduces Maxwell’s equations, wave equation, vector potentials, boundary conditions and Poynting vector. Time-harmonic fields and phasor approach are introduced. The properties of freely propagating plane waves in uniform and layered media are derived, as well as waves guided by structures, including various transmission lines, hollow waveguides and dielectric waveguides. A unified treatment of wave propagation is given with general theorems and examples drawn from microwaves, integrated circuits and optics.

Prerequisite(s): Graduate status and EE 3604.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Group 2: 6-12 Credits

Two sequences each containing two courses; one course in each sequence may be a core course in Group 1. Both of these sequences must be in electrical engineering. Approved course sequences for the program are detailed in the ECE Graduate Student Manual.

Group 3: 9-15 Credits

Approved electives, which may include up to 6 credits of courses offered by any science or engineering program.

Minimum Total: 30 Credits

Out-Of-Department Courses:

At least 24 credits must be in EL prefixed courses. A 3-credit course in other science or engineering disciplines may substitute for an EL course with approval by an ECE graduate adviser. Remaining credits can be from any graduate courses in science or engineering.

Thesis, Project, and Reading

A master’s thesis (EL 997x, 6 credits) or an MS project (EL 9953 or EL 9963, 3 credits each) or a reading course (EL 9933 or EL 9943, 3 credits each) may be included as part of the elective courses in Group 3. Oral defense of the master’s thesis with at least three professors in attendance is required. The total credits for thesis, projects and readings should not exceed 9 credits within the 30 credits required for the MS degree. At most 3 credits can be taken for reading.
A complete course of study, including the choice of the course sequences, should be arranged in consultation with an adviser. An overall GPA of 3.0 in all graduate courses is required. In addition, a 3.0 average is required in the combination of five to seven courses offered to satisfy Groups 1 and 2 above. Students should consult the Department of Electrical and Computer Engineering’s Graduate Student Manual for detailed rules and procedures, including student status, transfer credits, recommended electives, two-course sequences, current areas of research and disqualification for low grades. Descriptions of graduate courses used in the Electrophysics Program are located in the Electrical Engineering Program section of this catalog.

Systems Engineering

Program Co-Directors: Zhong-Ping Jiang and Farshad Khorrami

Systems engineering is the theoretical knowledge underlying the engineering of modern complex systems. Systems engineers apply this knowledge to designing systems, usually integrating several disciplines to achieve the desired objective. Theoretical resources include newer branches of applied mathematics, modeling and simulation, analysis of signals and systems, communication and control theories, optimization and decision-making techniques, and computer science.

Faced with a diverse and complex scientific environment, systems engineering assignments cross traditional engineering applications lines. These applications include communications, networking, transportation, urban services, bioengineering, resource management, power and energy, and environmental and pollution control.

The Systems Engineering Program stresses computer use. The interdisciplinary program covers the viewpoints, analysis and mathematical techniques of signals and systems; feedback control; data analysis; optimization and simulation, information communication; instrumentation and measurement. NYU-Poly orientation and training gives systems engineering students the ability to analyze and solve today’s complex technological and societal problems.

The Department of Electrical and Computer Engineering administers the Master of Science in Systems Engineering Program. Outstanding students should apply for financial aid including research fellowships, teaching fellowships or partial tuition remission. Students who wish to continue graduate study toward a PhD in systems engineering may do so in the PhD in Electrical Engineering Program.

Goals and Objectives

The Master of Science program in Systems Engineering aims to provide students with:

- Skills and advanced knowledge in engineering-systems design and analysis, including modeling and simulation, signals and systems analysis, communication and control theories, and optimization and decision-making techniques.
- Modern computer training for analysis, simulation and solving real system problems.
- Baseline skills and knowledge in systems engineering project management.
- A basis for continued, lifelong learning in the profession.

Masters

Systems Engineering, M.S.

Requirements for the Master of Science
The entrance requirement for a Master of Science in Systems Engineering is a bachelor’s degree in engineering or science from an accredited institution, with a GPA of 3.0 or above in undergraduate courses. For some tracks, students need undergraduate courses in differential equations, probability, linear systems, feedback control and computer programming. Students with subject-area deficiencies should take the necessary required courses.

To satisfy MS in Systems Engineering requirements, students must complete three core courses and two tracks; at least one must be a core track. A minimum of three courses should be taken in a track. One course in each track may be a core course. Students can choose the remaining credits (up to 9 credits) from any science, engineering and management courses. If a student elects to write a MS thesis (6 credits), only two courses in a track are required. The total number of credits required is 30 and at least 15 credits should be from EL-prefixes courses. A GPA of 3.0 or above is required in all graduate courses.

Core Courses: 9 Credits

Three courses from among the following:

**EL 5213 Introduction to Systems Engineering**

*3 Credits* This course introduces fundamentals of systems engineering process. Topics: Multidisciplinary systems methodology, design and analysis of complex systems. Brief history of systems engineering. Mathematical models. Objective functions and constraints. Optimization tools. Topics to be covered include identification, problem definition, synthesis, analysis and evaluation activities during conceptual and preliminary system design phases. Decision analysis and utility theory. Information flow analysis in organizations. Elements of systems management, including decision styles, human information processing, organizational decision processes and information system design for planning and decision support. Basic economic modeling and analysis. Requirements development, life-cycle costing, scheduling and risk analysis. Application of computer-aided systems engineering (CASE) tools.

*Prerequisite(s): Graduate status.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6213 System Modeling, Analysis and Design**

*3 Credits* Introduction of basic system concepts such as system state, inputs, outputs and disturbances. Modeling methods and Computer Aided Systems Engineering (CASE) formal structures. CASE tools for solving practical systems related problems. Quantitative techniques including linear programming, network flow analysis, integer and nonlinear programming, Petri nets, basic probabilistic and stochastic tools, Markov processes, queueing theory and Monte Carlo techniques for simulation. Fundamentals of decision and risk analysis.

*Prerequisite(s): EL 5213. Corequisite(s): EL 6303 recommended.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6233 System Optimization Method**

*3 Credits* Formulations of system optimization problems. Elements of functional analysis applied to system optimization. Local and global system optimization with and without constraints. Variational methods, calculus of variations, and linear, nonlinear and dynamic programming iterative methods. Examples and applications. Newton and Lagrange multiplier algorithms, convergence analysis.

*Prerequisite(s): Graduate status and EL 5253 or EL 6253.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
EL 6253 Linear Systems

3 Credits Basic system concepts. Equations describing continuous and discrete-time linear systems. Time domain analysis, state variables, transition matrix and impulsive response. Transform methods. Time-variable systems. Controllability, observability and stability. SISO pole placement, observer design. Sampled data systems.

Prerequisite(s): Graduate status and EE 3054 or EL 5253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6303 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: BE 6453.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8203 Project Management

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Core Tracks: 6-18 Credits

Network Management
EL 5363 Principles of Communication Networks

3 Credits This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

Prerequisite(s): MA 3012 or instructor's permission.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5373 Internet Architecture and Protocols

3 Credits This course introduces basic local area networking technologies and protocols in a set of lectures and laboratory experiments. Topics: link level protocols, Local area networks: CSMA/CD, Token Ring, IEEE standards and protocols. The Internet protocol suite: IP, ARP, RARP, ICMP, UDP and TCP. LAN Interconnection: bridges, routers and gateways. Application protocols: SNMP, FTP, SMTP and NFS.

Prerequisite(s): EL 5363 or EE 136.
Also listed under: EE 4173.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6373 Local and Metropolitan Area Networks

3 Credits This course introduces students to fundamental design issues in wireless and wired local and metropolitan area networks, explains the state-of-the-art solutions proposed and deployed in the field by using latest standards and protocols as examples, and discusses trends in the wireless/wired LAN/MANs. Example wireless technologies covered include the IEEE 802 family of protocols, e.g., WiFi, WiMax and Bluetooth. Example wireline technologies include those associated with Ethernet and MAN technologies such as Resilient Packet Ring.

Prerequisite(s): EL 5363 or EE 136 or instructor’s permission.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 7353 Communication Networks I: Analysis, Modeling and Performance

3 Credits The course introduces the analytical techniques used in the design and performance analysis of networks. Building on their knowledge of networking technology and applied mathematics, especially probability, students learn basic queueing theory, to be applied to performance analysis of multiplexers, switches and multiple access networks. Newer techniques such as the network calculus, the study of non-Poissonian long range dependent traffic sources and applications to TCP, admission control, advanced packet switches and IEEE 802.11 networks are introduced.

Prerequisite(s): EL 5363 and EL 6303.
Note: Online version available.
EL 7363 Communications Networks II: Design and Algorithms

3 Credits The course covers network design, which consists of topology design and traffic routing taking into account dynamics in network states, such as link/node failures and traffic demand variations. Efficient design models and optimization methods are crucial to simultaneously achieve good network user performance and high savings in network deployment and maintenance. This course introduces mathematical models, design problems and optimization algorithms that can be used to guide network design practice. Subjects include: Network Design Problem Modeling, Optimization Methods, Multi-Commodity Flow Routing, Location and Topological Design, Fair Networks, Resilient Network Design, Robust Network Design, Multi-Layer Networks.

Prerequisite(s): Graduate status, EL 5363 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Wireless Communications

EL 5013 Wireless Personal Communication Systems

3 Credits The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference- limited communications, multiple access, radio resources management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

Prerequisite(s): EE 3404 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5023 Wireless Information Systems Laboratory I

3 Credits This course includes hands-on experience with a combination of laboratory experiments, lectures and projects relating to spread spectrum code division multiple access (CDMA) wireless communication systems. Specific topics include pseudo-noise code generation, transmitters and receivers for direct sequence and frequency hopping systems, acquisition and tracking, CDMA wireless computer communications, UHF channel propagation characteristics including multipath time delay profiles and attenuation measurements, bit error rate measurements, phase locked loops and spectrum sharing with existing narrowband users.

Prerequisite(s): Graduate status or EE 3404.
Also listed under: EE 4183.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

EL 5033 Wireless Information Systems Laboratory II

3 Credits This course includes hands-on experience with a combination of laboratory experiments, lectures and projects relating to basic and advanced topics in wireless communications. Specific topics include mixers, IQ modulation, phase locked loops, receiver design, PN code acquisition, smart antennas and RFID.
EL 6013 Principles of Digital Communications: Modulation and Coding

Prerequisite(s): EE 3404 and EL 6303.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6023 Wireless Communications: Channel Modeling and Receiver Design

3 Credits The course focuses on wireless communication channel models and practical techniques for mitigating transmission impairments. Topics: Channel Modeling Parameters: Path loss; Fading: long-term vs. short-term fading, flat vs. frequency selective fading and slow vs. fast fading; Multipath spread parameters: delay spread, angular spread and Doppler spread, Matrix Channel Modeling for Multiple Input and Multiple Output (MIMO) Systems. Channel Parameter Estimation: training sequence and blind approaches. Mitigation: Mitigation of path loss and fading: Diversity, handoff and power control; Mitigation of intersymbol interference: rake receiver and equalizer; Mitigation of time variation: pilot symbols and dynamic tracking. Processing Techniques: LS, zero forcing, MMSE, LMS, etc.

Prerequisite(s): Graduate status or EE 3404, MA 3012.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6033 Modern Wireless Communication Techniques and Systems

3 Credits The course covers Multiple Access and Multiplexing Techniques; Spread spectrum and Code division multiple access (CDMA) techniques: Direct sequence, Frequency hopping; Multicarrier Techniques: Orthogonal frequency division (OFDM) and Multicarrier CDMA (MC-CDMA); New Wireless Communication Systems: Ultra Wideband communications, Wireless Fidelity (Wi-Fi), Radio Frequency Identification (RFID), Bluetooth, etc.

Prerequisite(s): EE 3404 and EL 6303.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Systems and Automation

EL 5223 Sensor Based Robotics
The course covers robot mechanisms, robot arm kinematics (direct and inverse kinematics), robot arm dynamics (Euler-Lagrange, Newton-Euler and Hamiltonian Formulations), six degree-of-freedom rigid body kinematics and dynamics, quaternion, nonholonomic systems, trajectory planning, various sensors and actuators for robotic applications, end-effector mechanisms, force and moment analysis, introduction to control of robotic manipulators.

Prerequisite(s): Graduate status. Corequisite(s): EE 3064. Pre/Co-requisite: EE 3064.
Also listed under: ME 6613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5253 Applied Matrix Theory**

Prerequisite(s): Graduate status, MA 2012, MA 2132, MA 2112 and MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6243 System Theory and Feedback Control**

3 Credits Design of single-input-output and multivariable systems in frequency domain. Stability of interconnected systems from component transfer functions. Parameterization of stabilizing controllers. Introduction to optimization (Wiener-Hopf design).

Prerequisite(s): Graduate status and EE 3064.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6253 Linear Systems**

3 Credits Basic system concepts. Equations describing continuous and discrete-time linear systems. Time domain analysis, state variables, transition matrix and impulsive response. Transform methods. Time-variable systems. Controllability, observability and stability. SISO pole placement, observer design. Sampled data systems.

Prerequisite(s): Graduate status and EE 3054 or EL 5253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 8223 Applied Nonlinear Control**

3 Credits Stability and stabilization for nonlinear systems; Lyapunov stability and functions, input-output stability and control Lyapunov functions. Differential geometric approaches for analysis and control of nonlinear systems: controllability, observability, feedback linearization, normal form, inverse dynamics, stabilization, tracking and disturbance attenuation. Analytical approaches: recursive back stepping, input-to-state stability, nonlinear small-gain methods and passivity. Output feedback designs. Various application examples for nonlinear systems including robotic and communication systems.

Prerequisite(s): Graduate status and EL 6253 or EL 7253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Energy Systems

**EL 5613 Introduction to Electric Power Systems**

3 Credits The course focuses on basic concepts in electric power systems. Topics: single-and-three-phase circuits, power triangle; transmission lines parameters: resistance, inductance, capacitance, transformers and generators; lumped component piequivalent circuit representation; perunit normalization; symmetrical phase components; load-flow program.

*Prerequisite(s):* EE 2024 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6623 Power Systems Economics and Planning**

3 Credits Power-system economics: revenue requirements, load duration and reserve requirements. Load forecasting: econometric methods. Optimal expansion planning and methodologies: optimal generation expansion computer modeling. Decision analysis techniques. Deregulation of electric power industry.

*Prerequisite(s):* Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6633 Transients, Surges and Faults in Power Systems**

3 Credits Analysis of lumped-circuit, normal and abnormal transients in power equipment and systems. Short-circuit fault analysis and transient recovery of three-phase circuits. Analysis of traveling-wave surges on transmission lines, windings and integrated systems.

*Prerequisite(s):* Graduate status and EL 5613 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6653 Power System Stability**

3 Credits The course introduces power-system dynamics: mathematical modeling of prime movers, power plants, synchronous machines, field exciters transmission lines, relay loads and stabilizers.

*Prerequisite(s):* Graduate status, EE 3824 and EL 5613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Large Scale Systems Modeling and Control

**EL 6253 Linear Systems**

**Prerequisite(s):** Graduate status and EE 3054 or EL 5253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### EL 6243 System Theory and Feedback Control

3 Credits Design of single-input-output and multivariable systems in frequency domain. Stability of interconnected systems from component transfer functions. Parameterization of stabilizing controllers. Introduction to optimization (Wiener-Hopf design).

**Prerequisite(s):** Graduate status and EE 3064.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### EL 7253 State Space Design for Linear Control Systems

3 Credits Topics covered in this course include canonical forms; control system design objectives; feedback system design by MIMO pole placement; MIMO linear observers; the separation principle; linear quadratic optimum control; random processes; Kalman filters as optimum observers; the separation theorem; LQG; Sampled-data systems; microprocessor-based digital control; robust control and the servocompensator problem.

**Prerequisite(s):** Graduate status and EL 6253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### EL 8253 Large-Scale Systems and Decentralized Control

3 Credits This course introduces analysis and synthesis of large-scale systems. Topics: system order reduction algorithms, interconnected system stability, series expansion and singular perturbation. Lyapunov designs. Applications to traffic networks, power systems and transportation networks. Decentralized control: decentralized fixed-mode, LQR, frequency-shaped cost functional and overlapping decompositions. Stability of interconnected systems and Vector Lyapunov analysis.

**Prerequisite(s):** Graduate status and EL 7253 or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### EL 92X3 Selected Topics in Control Systems (X=1, 2,…9)

3 Credits The course discusses topics of current interest to feedback and control-system engineers. (See department mailing for detailed description of each particular offering.)

**Prerequisite(s):** Specified when offered.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Multimedia Applications**
EL 5123 Image Processing

3 Credits The course focuses on image formation and perception; image acquisition, representation and display; image sampling and resizing; contrast enhancement; two-dimensional Fourier transform and other unitary transforms; frequency domain and spatial domain linear filtering; median and morphological filtering; image smoothing, sharpening and edge detection through linear and nonlinear filtering; color image representation and processing; lossless and lossy image coding techniques and standards, image deblurring; imaging geometry, image registration and geometric transformation. Students also learn to implement selected imaging processing algorithms in MATLAB or C-language.

Prerequisite(s): Graduate student status or EE 3054 and MA 3012.
Also listed under: BE 6223.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 5143 Multimedia Laboratory

3 Credits This course provides hands-on experience in processing and communication of speech, audio, image and video signals. Topics include sampling and quantization, sampling rate conversion, lossless and lossy compression, basic techniques in speech, audio, image and video coding, multimedia conferencing, video on-demand, video multicasting, multimedia document creation. Students are exposed to popular software and hardware for multimedia signal processing and document creation. Each week includes a lecture and a lab.

Prerequisite(s): Graduate status or EE 3054 or equivalent.
Also listed under: EE 4153.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

EL 6113 Signals, Systems and Transforms

Prerequisite(s): Graduate status.
Also listed under: BE 6403.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6123 Video Processing

3 Credits This course covers Fourier analysis of video signals, properties of the human visual system, video signal sampling and sampling rate conversion, motion modeling and estimation, video compression techniques and standards, stereo video processing and compression, error control in networked video applications, analog and digital video systems. Students will learn to implement selected algorithms in MATLAB or C-language. A course-project is required.

Prerequisite(s): EL 5123 or EL 5143 and EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6643 Computer Vision and Scene Analysis

3 Credits An important goal of artificial intelligence is to equip computers with the capability to interpret visual inputs. Computer vision and scene analysis is an AI area that deals with constructing explicit, meaningful descriptions of physical objects from images. It includes many techniques from image processing, pattern recognition, geometric modeling and cognitive processing. This course introduces the many techniques and applications of computer vision and scene analysis.

Prerequisite(s): Graduate status, CS 5403 and MA 2012, or equivalents, or instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Elective Tracks: 0-9 Credits

Computer Systems and Security

CS 6813 Information, Security and Privacy

3 Credits This course introduces Information Systems Security and covers cryptography, capability and access control mechanisms, authentication models, security models, operating systems security, malicious code, security policy formation and enforcement, vulnerability analysis, evaluating secure systems.

Prerequisite(s): Graduate status.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 9223 Selected Topics in Computer Science
This course covers topics of current interest in computer science. Recent offerings include software specification and validation, parallel algorithms and architectures, client-server systems and advanced object-oriented design (Java). Advanced topics: Databases, performance analysis, computer simulation, Java programming, Unix programming, human and computer interaction, cryptography with financial applications and biometric identification.

Prerequisite(s): Graduate status; others specified when course is offered.

EL 6393 Advanced Network Security

While the recent proliferation of broadband wire-line and wireless networking technologies have substantially increased the available network capacity and enabled a wide-range of feature-rich high-speed communication services, security remains a major concern. Network attacks have become common recurring events that increasingly threaten the proper functioning and continual success of the communication infrastructure and services. One way to mitigate such threats is to develop new security-defense architectures, systems, methodologies and algorithms that can scale together with the communications infrastructure in terms of operating speed, operational simplicity and manageability. This course aims to understand the theoretical, architectural, system and implementation issues related to all aspects of security in high-speed networks and study various proposed solutions. Students are required to read research papers and complete a term project with either simulation programs to evaluate the proposed schemes, or architecture/VHDL designs for the schemes.

Prerequisite(s): CS 6823 or adviser approval.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Software Engineering

CS 6063 Software Engineering I

The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management. Understanding the processes applicable to the software development/integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6073 Software Engineering II

The course covers modern, advanced software engineering approaches with theory and practice orientations. Important design and management issues are analyzed and evaluated. Technical and management tradeoffs in distributed software systems are emphasized. An extensive number of real world case studies are assessed. A class project is required.

Prerequisite(s): Graduate status and CS 6063.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6083 Principles of Database Systems
3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.

Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6183 Fault-Tolerant Computers

3 Credits This course introduces a variety of hardware and software techniques to design and model fault-tolerant computers. Topics include coding techniques (Hamming, SECSED, SECDED, etc.); majority voting schemes (TMR); software redundancy (Nversion programming); software-recovery schemes; network reliability design and estimation. The course introduces probabilistic methods for reliability modeling. Other topics: Examples from space fault tolerant systems, networks, commercial nonstop systems (TANDEM and STRATUS), RAID memory systems. Fault-tolerant modeling tools such as HARP, SHURE and SHARPE.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Operations Research and Management

MG 6303 Operations Management

3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6463 Supply Chain Management

3 Credits This course introduces supply-chain management and covers its qualitative and quantitative aspects. The underlying objective is to: (1) introduce students to the standard business concepts (and associated terminology) involved in the retailing and supply-chain management; (2) develop skills in understanding and analyzing retailing, marketing, logistics, operations, channel management and allied issues and the interactions between them; and (3) examine and discuss the important role played by technology and integration at various points in the supply chain.

Also listed under: MN 6463.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8203 Project Management
3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Financial Engineering

FRE 6023 Economic Foundations in Finance

3 Credits This course studies the interactions between money, the financial system and the economy. Topics include supply and demand; consumer theory; theory of the firm; production costs and other subject areas such as interest rates and asset returns. This course summarizes key insights from financial economics as the methodological and conceptual basis of financial engineering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6083 Quantitative Methods in Finance

3 Credits This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6103 Corporate Finance

3 Credits The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6411 Fixed Income Securities and Interest Rate Derivatives

1.5 Credits This course examines the body of analytical tools and measures that constitute modern fixed-income markets. The valuation of interest-rate sensitive cash flows is the unifying theme. Major topics include theories of term structure, institutional
aspects of fixed-income markets and analytical techniques for managing interest-rate risk. Bond refunding, defeasance, corporate bonds, forwards, futures, options and interest-rate swaps are discussed. The course gives an overview of the major classes of fixed-income securities and the markets in which they trade. Among the major classes of fixed-income instruments discussed are Treasury and agency securities, mortgage-backed securities (including CMOs and Strips), asset-backed securities, municipals, floating and inverse floating rate securities.

Prerequisite(s): FRE 6023, FRE 6083 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6291 Applied Derivative Contracts**

1.5 Credits This course provides an introduction to derivative contracts with a special emphasis on current practical applications in use today by financial institutions for investing, hedging, trading and issuing. The characteristics and features of futures, forwards, swaps, options and structured notes are all covered with a special emphasis on useful applications. For each of the four primary derivative contracts, we review in these lectures the appropriate definitions, terminology, market mechanics and theoretical fair value pricing.

Prerequisite(s): FRE 6003, FRE 6023, FRE 6103 and graduate standing
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Biological Systems**

(Selected courses with prefix BE, CH, CM, subject to adviser approval)

**Free Electives: 0-9 Credits**

Any courses in science, engineering or management.

**Grand Total: 30 Credits**

**Note:**

The list of tracks and approved courses within a track may be updated after publication of this catalog. Students should consult the Department of Electrical and Computer Engineering’s Graduate Student Manual (www.poly.edu/academics/departments/electrical/graduate-resources) for any updated list. The Graduate Manual also contains more detailed rules and procedures on student status, transfer credits, recommended electives, current research areas and disqualification for low grades.

Descriptions of graduate courses in engineering, science and management used in the Systems Engineering Program are found in relevant program sections of this catalog.

**Telecommunications Networks**

Program Director: Yong Liu
Telecommunications is growing rapidly. From the military-communications networks of the early 1950s, telecommunications technology is used in almost all areas of modern society, from banking, reservation- and office-information systems, to corporate networks, the Internet and World Wide Web. Recent challenges include gigabit optical networks, multimedia communications and wireless network access.

The rapid evolution of telecommunications demands a broad educational background that includes contemporary technological breakthroughs. Polytechnic’s telecommunication-networks master’s program offers a wide range of courses, from fundamental topics to recent technological advances.

Goals and Objectives

The Master of Science in Telecommunication Networks Program prepares students for telecommunication-networks professions. The program trains students to understand, design, manage and operate such networks.

The Program’s unique features are:

- an exceptionally wide range of course offerings in telecommunications technology;
- hands-on graduate laboratory courses in networking;
- professors with extensive research, industry and teaching experience;
- interaction with Polytechnic’s New York State Center for Advanced Technology in Telecommunications (CATT), where students have access to cutting-edge research and development projects.

Masters

Telecommunication Networks, M.S

Requirements for the Master of Science

Admission to a Master of Science in Telecommunication Networks requires an undergraduate degree in computer science, computer engineering or electrical engineering with a superior undergraduate record from an accredited institution. The Graduate Record Exam (GRE) is required. Applicants with comparable degrees in other fields are considered individually for admission. Generally, entering students must have a basic knowledge of computer fundamentals, such as programming in C++, data structures and computer architecture. NYU-Poly conditionally admits students with superior academic credentials who lack sufficient background, pending completion of several individually specified preparatory courses. These courses include CS 5303, Introduction to Programming and Problem Solving, and CS 5403, Data Structures and Algorithms. However, no credit is allowed for any preparatory courses toward this degree. Other preparatory courses may be required. In some cases, students are interviewed to determine the necessary preparatory courses they need. Successful completion with a GPA of 3.0 or better is required for transfer to regular status. Admission with advanced standing is accepted in accordance with NYU-Poly regulations published in this catalog. Students may transfer a maximum of 9 credits to the MS in Telecommunications Networks from previous graduate work at an acceptable institution. To satisfy the master’s degree requirements, students must complete a total of 30 credits as described below, with an overall GPA of 3.0 or above. In addition, a 3.0 average is required in core courses described in Group 1 and Group 2 below.

Students who have satisfactorily completed equivalent courses, as determined by the program director, may replace required courses in Group 1 and Group 2 with other courses, starting with the remaining Group 2 courses. For example, a student who previously took a course equivalent to EL 5373 will be required to take the remaining four courses in Group 2. A student who previously took two or more equivalent courses from Group 1 and 2 can replace these courses with advanced courses. Program-director permission is required for all substitutions.
Group 1 - Required Core Course: 3 Credits

**EL 5363 Principles of Communication Networks**

*3 Credits* This course covers all fundamental aspects of communications networks. Topics are: protocol architecture, data transmission and signal encoding, multiplexing, spread spectrum, data link control, local area networks, wireless LAN, circuit switching, packet switching, routing, traffic control, Internet protocol, transport layer protocol, application design and the basics of network security.

Prerequisite(s): MA 3012 or instructor’s permission.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

Students who satisfactorily completed a course equivalent to EL 5363—e.g., EE 136, or otherwise as determined by the adviser—can replace this course by one from Group 2.

Group 2 - Additional Core Courses: 12 Credits

Students are required to take four out of the five course choices listed below.

**EL 5373 Internet Architecture and Protocols**

*3 Credits* This course introduces basic local area networking technologies and protocols in a set of lectures and laboratory experiments. Topics: link level protocols. Local area networks: CSMA/CD, Token Ring, IEEE standards and protocols. The Internet protocol suite: IP, ARP, RARP, ICMP, UDP and TCP. LAN Interconnection: bridges, routers and gateways. Application protocols: SNMP, FTP, SMTP and NFS.

Prerequisite(s): EL 5363 or EE 136.

Also listed under: EE 4173.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

**CS 6843 Computer Networking**

*3 Credits* This course takes a top-down approach to computer networking. After an overview of computer networks and the Internet, the course covers the application layer, transport layer, network layer and link layers. Topics at the application layer include client-server architectures, P2P architectures, DNS and HTTP and Web applications. Topics at the transport layer include multiplexing, connectionless transport and UDP, principles or reliable data transfer, connection-oriented transport and TCP and TCP congestion control. Topics at the network layer include forwarding, router architecture, the IP protocol and routing protocols including OSPF and BGP. Topics at the link layer include multiple access protocols, ALOHA, CSMA/CD, Ethernet, CSMA/CA, wireless 802.11 networks and link layer switches. The course includes simple quantitative delay and throughput modeling, socket
programming and network application development and Ethereal labs.

Prerequisite(s): Graduate status and CS 2134.  
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6373 Local and Metropolitan Area Networks**

3 Credits This course introduces students to fundamental design issues in wireless and wired local and metropolitan area networks, explains the state-of-the-art solutions proposed and deployed in the field by using latest standards and protocols as examples, and discusses trends in the wireless/wired LAN/MANs. Example wireless technologies covered include the IEEE 802 family of protocols, e.g., WiFi, WiMax and Bluetooth. Example wireline technologies include those associated with Ethernet and MAN technologies such as Resilient Packet Ring.

Prerequisite(s): EL 5363 or EE 136 or instructor’s permission.  
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

**EL 6383 High-Speed Networks**

3 Credits This course covers the basics, architectures, protocols and technologies for high-speed networks. Topics: synchronous optical network (SONET), asynchronous transfer mode (ATM), ATM adaptation layer (AAL), 10/100/1000/10G Ethernet, Ethernet over SONET (EOS), quality of service control, packet scheduling, network processor, buffer management, flow and congestion control, TCP, high-speed TCP and XCP, Routing and IP fast rerouting, WDM networks, MPLS and GMPLS. Each student is required to complete a project that can be reading, software design or hardware design.

Prerequisite(s): Graduate status, EL 5363 or EE 136 or equivalent.  
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 6133 Computer Architecture I**

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer-performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.  
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

**CS 6233 Introduction to Operating Systems**
3 Credits This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6273 Performance Evaluation of Computer Systems

3 Credits This course focuses on modeling and performance analysis of computer systems. It concentrates on testing and evaluation of three-tiered distributed client/server and WEB-based systems and generally on distributed networking systems. The course presents and evaluates various systems architectures from a macro and micro viewpoint.

Prerequisite(s): Graduate status and EL 5363 or MA 2212/MA 2222 and instructor’s permission.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

EL 7353 Communication Networks I: Analysis, Modeling and Performance

3 Credits The course introduces the analytical techniques used in the design and performance analysis of networks. Building on their knowledge of networking technology and applied mathematics, especially probability, students learn basic queuing theory, to be applied to performance analysis of multiplexers, switches and multiple access networks. Newer techniques such as the network calculus, the study of non-Poissonian long range dependent traffic sources and applications to TCP, admission control, advanced packet switches and IEEE 802.11 networks are introduced.

Prerequisite(s): EL 5363 and EL 6303.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6823 Network Security

3 Credits This course begins by covering attacks and threats in computer networks, including network mapping, port scanning, sniffing, DoS, DDoS, reflection attacks, attacks on DNS and leveraging P2P deployments for attacks. The course continues with cryptography topics most relevant to secure networking protocols. Topics covered are block ciphers, stream ciphers, public key cryptography, RSA, Diffie Hellman, certification authorities, digital signatures and message integrity. After surveying basic cryptographic techniques, the course examines several secure networking protocols, including PGP, SSL, IPsec and wireless security protocols. The course examines operational security, including firewalls and intrusion-detection systems. Students read recent research papers on network security and participate in an important lab component that includes packet sniffing, network mapping, firewalls, SSL and IPsec.

Prerequisite(s): Graduate status and EL 5363 or CS 6843.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
In certain rare circumstances, and with program-director approval, students may take other computer science and electrical engineering courses to fulfill the core requirement. Students may not take both CS 6843 and EL 5373.

Group 3 - Project Requirement: 3 Credits

All Telecommunication Networks Program students are required to take a project course, either CS 6873 Project in Telecommunication Networks or EL 9953 Advanced Projects I, depending on whether the project adviser teaches in the CS or ECE department. Before registering, students must obtain a project adviser and create an approved project plan. The project should be completed in one semester. After obtaining approval, students may substitute the required 3-credit project with a 6-credit MS thesis. The extra 3 thesis credits will count toward the program elective in Group 4.

Group 4 - Program Elective Courses: 12 Credits

Students must take four courses (not already counted toward the core requirement) from the following partial course list. Other courses not on this list can be taken with program director approval.

**EL 5013 Wireless Personal Communication Systems**

*3 Credits* The course introduces underlying principles of wireless communications and practical systems. Topics: Science and technology including radio signal propagation, interference- limited communications, multiple access, radio resource management and mobility management. Building blocks of wireless networks. Essential functions of cellular telephone systems and wireless local area networks. Details of the most important technologies including GSM, CDMA, wideband CDMA and WiFi (IEEE802.11).

Prerequisite(s): EE 3404 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 5023 Wireless Information Systems Laboratory I**

*3 Credits* This course includes hands-on experience with a combination of laboratory experiments, lectures and projects relating to spread spectrum code division multiple access (CDMA) wireless communication systems. Specific topics include pseudonoise code generation, transmitters and receivers for direct sequence and frequency hopping systems, acquisition and tracking, CDMA wireless computer communications, UHF channel propagation characteristics including multipath time delay profiles and attenuation measurements, bit error rate measurements, phase locked loops and spectrum sharing with existing narrowband users.

Prerequisite(s): Graduate status or EE 3404.
Also listed under: EE 4183.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0
- CS 5023 Introduction to Java Programming

**EL 5143 Multimedia Laboratory**

*3 Credits* This course provides hands-on experience in processing and communication of speech, audio, image and video signals. Topics include sampling and quantization, sampling rate conversion, lossless and lossy compression, basic techniques in speech, audio, image and video coding, multimedia conferencing, video on-demand, video multicasting, multimedia document creation. Students are exposed to popular software and hardware for multimedia signal processing and document creation. Each week includes a lecture and a lab.

Prerequisite(s): Graduate status or EE 3054 or equivalent.
Also listed under: EE 4153.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 4.5 | Weekly Recitation Hours: 0

**EL 6013 Principles of Digital Communications: Modulation and Coding**

Prerequisite(s): EE 3404 and EL 6303.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6023 Wireless Communications: Channel Modeling and Receiver Design**

3 Credits  The course focuses on wireless communication channel models and practical techniques for mitigating transmission impairments. Topics: Channel Modeling Parameters: Path loss; Fading: long-term vs. short-term fading, flat vs. frequency selective fading and slow vs. fast fading; Multipath spread parameters: delay spread, angular spread and Doppler spread, Matrix Channel Modeling for Multiple Input and Multiple Output (MIMO) Systems. Channel Parameter Estimation: training sequence and blind approaches. Mitigation: Mitigation of path loss and fading: Diversity, handoff and power control; Mitigation of intersymbol interference: rake receiver and equalizer; Mitigation of time variation: pilot symbols and dynamic tracking. Processing Techniques: LS, zero forcing, MMSE, LMS, etc.

Prerequisite(s): Graduate status or EE 3404, MA 3012.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6033 Modern Wireless Communication Techniques and Systems**

3 Credits  The course covers Multiple Access and Multiplexing Techniques; Spread spectrum and Code division multiple access (CDMA) techniques: Direct sequence, Frequency hopping; Multicarrier Techniques: Orthogonal frequency division (OFDM) and Multicarrier CDMA (MC-CDMA); New Wireless Communication Systems: Ultra Wideband communications, Wireless Fidelity (Wi-Fi), Radio Frequency Identification (RFID), Bluetooth, etc.

Prerequisite(s): EE 3404 and EL 6303.
Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6063 Information Theory**

3 Credits  Mathematical information measures: entropy, relative entropy and mutual information. Asymptotic equipartition property, entropy rates of stochastic processes. Lossless source encoding theorems and source coding techniques. Channel capacity, differential entropy and the Gaussian channel. Lossy source coding rate distortion theory. Brief overview of network
information theory.

Prerequisite(s): Graduate status and EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6303 Probability Theory

Prerequisite(s): Graduate status and MA 3012.
Also listed under: BE 6453.

Note: Online version available.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6313 Stochastic Processes

Prerequisite(s): EL 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EL 6383 High-Speed Networks

3 Credits This course covers the basics, architectures, protocols and technologies for high-speed networks. Topics: synchronous optical network (SONET), asynchronous transfer mode (ATM), ATM adaptation layer (AAL), 10/100/1000/10G Ethernet, Ethernet over SONET (EOS), quality of service control, packet scheduling, network processor, buffer management, flow and congestion control, TCP, high-speed TCP and XCP, Routing and IP fast rerouting, WDM networks, MPLS and GMPLS. Each student is required to complete a project that can be reading, software design or hardware design.

Prerequisite(s): Graduate status, EL 5363 or EE 136 or equivalent.
Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 6393 Advanced Network Security**

*3 Credits* While the recent proliferation of broadband wire-line and wireless networking technologies have substantially increased the available network capacity and enabled a wide-range of feature-rich high-speed communication services, security remains a major concern. Network attacks have become common recurring events that increasingly threaten the proper functioning and continual success of the communication infrastructure and services. One way to mitigate such threats is to develop new security/defense architectures, systems, methodologies and algorithms that can scale together with the communications infrastructure in terms of operating speed, operational simplicity and manageability. This course aims to understand the theoretical, architectural, system and implementation issues related to all aspects of security in high-speed networks and study various proposed solutions. Students are required to read research papers and complete a term project with either simulation programs to evaluate the proposed schemes, or architecture/VHDL designs for the schemes.

*Prerequisite(s):* CS 6823 or adviser approval.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 7353 Communication Networks I: Analysis, Modeling and Performance**

*3 Credits* The course introduces the analytical techniques used in the design and performance analysis of networks. Building on their knowledge of networking technology and applied mathematics, especially probability, students learn basic queuing theory, to be applied to performance analysis of multiplexers, switches and multiple access networks. Newer techniques such as the network calculus, the study of non-Poissonian long range dependent traffic sources and applications to TCP, admission control, advanced packet switches and IEEE 802.11 networks are introduced.

*Prerequisite(s):* EL 5363 and EL 6303.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 7363 Communications Networks II: Design and Algorithms**

*3 Credits* The course covers network design, which consists of topology design and traffic routing taking into account dynamics in network states, such as link/node failures and traffic demand variations. Efficient design models and optimization methods are crucial to simultaneously achieve good network user performance and high savings in network deployment and maintenance. This course introduces mathematical models, design problems and optimization algorithms that can be used to guide network design practice. Subjects include: Network Design Problem Modeling, Optimization Methods, Multi-Commodity Flow Routing, Location and Topological Design, Fair Networks, Resilient Network Design, Robust Network Design, Multi-Layer Networks.

*Prerequisite(s): Graduate status, EL 5363 or equivalent.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EL 7373 High Performance Switches and Routers**
3 Credits This course addresses the basics, the theory, architectures and technologies to implement high-performance high-speed large-scale routers and switches. The fundamental concepts and technologies of packet forwarding, classification and switching learned in the class are useful and practical when designing IP routers, Ethernet switches and optical switches. Topics: IP Route Lookup, Packet Classification, Packet Scheduling, Buffer Management, Basics of Packet Switching, Output-buffered Switches, Shared-memory Switches, Crosspoint-buffered Switches, Input-buffered Switches, Clos-network Switches, Multi-Stage Buffered Switches, Two-Stage Load-Balanced Switches, Optical Packet Switches and ASIC for IP Routers.

Prerequisite(s): EL 5363 or adviser approval.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6033 Design and Analysis of Algorithms I

3 Credits This course reviews basic data structures and mathematical tools. Topics: Data structures, priority queues, binary search trees, balanced search trees. Btrees. Algorithm design and analysis techniques illustrated in searching and sorting: heapsort, quicksort, sorting in linear time, medians and order statistics. Design and analysis techniques: dynamic programming, greedy algorithms. Graph algorithms: elementary graph algorithms (breadth first search, depth first search, topological sort, connected components, strongly connected components), minimum spanning tree, shortest path. String algorithms. Geometric algorithms. Linear programming. Brief introduction to NP completeness.

Prerequisite(s): Graduate status, CS 5403 and CS 6003.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

CS 6043 Design and Analysis of Algorithms II

3 Credits This course covers techniques in advanced design and analysis. Topics: Amortized analysis of algorithms. Advanced data structures: binomial heaps, Fibonacci heaps, data structures for disjoint sets, analysis of union by rank with path compression. Graph algorithms: elementary graph algorithms, maximum flow, matching algorithms. Randomized algorithms. Theory of NP completeness and approach to finding (approximate) solutions to NP complete problems. Selected additional topics that may vary.

Prerequisite(s): Graduate status and CS 6033.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6133 Computer Architecture I

3 Credits This course provides students with an understanding of computer-hardware subsystems, digital design strategies and fundamental computer- performance and capacity-improvement techniques. Combinational and sequential circuits are developed for the essential building blocks of computers. Binary number systems are presented in both human and computer algorithms. A uniprocessor computer is built from the blocks developed. An assembly language and an instruction set are presented. Processor implementation with a data path and hardwired and microprogrammed control is introduced. Performance evaluation of computers is studied. Basic pipelining is introduced to improve system performance. Memory-hierarchy alternatives are introduced to improve the capacity of the computing system.

Prerequisite(s): Graduate status.

Note: Online version available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
CS 6143 Computer Architecture II

3 Credits This course covers high-speed computer design. Topics: Uni-processor computer architectures that exploit parallelism, advanced pipelining, superscalar, VLIW, vector processors. Parallel processing: Interconnection structures, MIMD and SIMD systems. Other selected parallel computing topics, such as parallel algorithms, PRAM machines and multicore processing.

Prerequisite(s): Graduate status and CS 6133.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6233 Introduction to Operating Systems

3 Credits This course introduces basic issues in operating systems. Topics: Threads, processes, concurrency, memory management, I/O Control and case studies.

Prerequisite(s): Graduate status.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

CS 6243 Operating Systems II

3 Credits This course surveys recent important commercial and research trends in operating systems. Topics may include virtualization, network server design and characterization, scheduling and resource optimization, file systems, memory management, advanced debugging techniques, data-center design and energy utilization.

Prerequisite(s): CS 6233.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6063 Software Engineering I

3 Credits The course emphasizes the full software-engineering approach with alternative approaches. Technical emphasis is on requirements, design, development and modeling. Management issues include software cost estimating and project management. Understanding the processes applicable to the software development/ integration cycle and maintenance along with technology changes on quality and development activities is highlighted.

Prerequisite(s): Graduate status and CS 5403.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 6083 Principles of Database Systems

3 Credits This course broadly introduces database systems, including the relational data model, query languages, database design, index and file structures, query processing and optimization, concurrency and recovery, transaction management and database design. Students acquire hands-on experience in working with database systems and in building web-accessible database applications.
Prerequisite(s): Graduate status, CS 6003 or equivalent, familiarity with basic data structures and operating system principles.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG graduate courses:

Relevant management-department graduate courses can be taken with approval from the program director. No more than two MG courses can be counted toward the MSTN degree.

Total credits needed for degree: 30 credits

Note:

Descriptions of electrical engineering, computer science and management courses can be found in this catalog’s Electrical Engineering, Computer Science and Engineering, and Technology Management program sections. Information about Graduate Certificate in Telecommunication Network Management can be found in the Electrical Engineering program section.

Department of Finance and Risk Engineering

Head: Charles S. Tapiero
Deputy Head: Barry Blecherman

Mission

The Department of Finance and Risk Engineering creates world-class research and degree programs bridging theory and practice in our disciplines.

The Department

The Department of Finance and Risk Engineering (FRE) is a diversified research and degree granting department—the second in the U.S. to provide the MS degree in Financial Engineering—providing a broadly based education in corporate and computational finance and financial markets, risk finance (including credit risk, insurance and financial risk engineering) and technology and algorithmic finance. The department’s mission is to provide the talent and excellence needed by financial services industries and their many associated professions.

The department’s educational and MS-degree-granting programs, research and extracurricular activities seeks to bridge theory and practice and meet the many and complex challenges that the financial engineering professions are confronted with now and in the future. Graduates may assume diversified employment positions in the many facets that make up the financial engineering profession. Trading desks, hedge fund and investment managers, CFOs, quantitative professionals, insurance firms, financial technology managers as well as financial and specialized risk managers define the broad set of professions that are open to NYU-Poly’s graduates in financial engineering.

The department’s curriculum combines a rigorous vision of economics, finance, applied quant finance, actuarial science and financial technology in their theoretical and practical setting in a global world and global financial markets.
In addition, the department provides interdisciplinary certificate and opportunities to combine studies, such as computer science, mathematics and engineering with financial management and technology and risk engineering.

The department is based both in Brooklyn at the MetroTech Center and in Wall Street, in the midst of the world’s leading financial center. Our MS degrees and certificates offer specialization tracks spanning Corporate and Financial Markets (CM), Computational Finance (CF), Technology and Algorithmic Finance (TAF), and Risk Finance (RF) emphasizing the convergence of credit risk, insurance and financial risk management.

The department is staffed by a number of leading academics and practitioners, both nationally and internationally, and boasts a number of outstanding affiliated professors and cutting-edge traders, hedge funds managers and academics turned practitioners by the lure of Wall Street. This combination of talent, theoretically and practically based, national and international, provides a first-rate education embedded in answering the real needs of the financial services sector that recognizes the continuous growth of finance, financial insurance and risk engineering, technology, financial engineering and management in an increasingly global world. In addition, the department has a Research Institute that emphasizes specialized research areas and provides a public service. These include:

- Research focusing on the many issues that transpired following the financial credit crisis, incomplete markets finance (including rare, Black Swans and uncommon risks finance, financial regulation, leverage, liquidity and corporate structure, real finance and business policy, alternative and behavioral finance as well as topical projects pursued by students and faculty.
- Research on Algorithmic Trading, emphasizing trading platforms and software development and the management of financial technology. The institute is a research hub as well as a laboratory for generating new ideas in computer science and finance. The Institute undertakes collaborative research projects to provide ideas, methods and tools with scholarly and practical applications with the purpose of opening greater opportunities for our students when they graduate.
- Research in corporate finance, liquidity management and the many facets of theoretical and applied finance.

The department operates in close collaboration with NYU’s other educational programs (such as the Financial Mathematics program at the Courant Institute of Mathematical Sciences) as well as a number of universities in Europe and China. Collaborative agreements will allow some students to visit other similar programs and profit from more diversified cultures and experiences that are essential today in a more global financial environment.

The Profession

Financial engineering is driven by financial practice to bridge means and ends and to reconcile the theoretical foundations of financial economics with the reality of financial markets. Finance is about money and therefore, all problems that can be transformed to a real or to a synthetic financial money framework can profit by the extent to which money is used and exchanged. It is in such a perspective, that many economic and engineering problems can be conceived as “financial engineering problems.” This conception of financial engineering underpins the NYU-Poly Institute programs in finance. In this spirit, our goal and objectives pertain to trading, speculating, investing, pricing and corporate and risk management but also to pricing and managing the risks of infrastructure, the environment and business management. In this sense, financial engineering as with all technology and scientific based professions is a “work in progress,” whose purpose is to present and communicate with practitioners and financial engineering students to better prepare their entering the world of finance. We meet the challenges of
financial markets—in analysis, pricing, trading and investing—for technology managers and computational finance engineers in fast-moving, highly rewarding careers that create value enabled by finance, technology and computational mathematics.

**Degrees Offered**

**Master of Science in Financial Engineering**

**Tracks**

- Financial Engineering, Financial Markets and Corporate Finance Track, M.S.
- Financial Engineering, Technology and Algorithmic Finance Track, M.S.

**Graduate Certificates**

- Financial Engineering Graduate Certificate
- Financial Technology Management Graduate Certificate
- Financial Risk Management Graduate Certificate

**Classrooms**

Manhattan Location
55 Broad Street, Lower Concourse
New York, NY 10004

**Graduate and Certificate Programs**

**The Master of Science Program**

The Master of Science in Financial Engineering (FE) is a 33-credit program designed to provide the skills required to operate at the cutting-edge of financial engineering in today’s financial services industry. Separate tracks make it possible to pursue careers in financial markets and corporate finance, in financial technology, in computational finance or in risk finance. The program is rigorous, demanding and selective.

Graduates of the Financial Markets and Corporate Finance Track are expected to seek positions in financial management groups, on trading and arbitrage desks, in product structuring groups, in derivatives groups, in investment banking departments and in the information-technology firms that support the trading operations of financial institutions.

Graduates of the Technology and Algorithmic Finance Track are actively involved in the development and implementation of the entire spectrum of algorithmic trading strategies, software applications, databases and networks used in modern financial services firms. The techniques it applies bridge computer science and finance to prepare graduates to participate in large-scale and mission-critical projects. Applications include high frequency finance, behavioral finance, agent-based modeling and algorithmic trading and portfolio management.

The Computational Finance Track emphasizes both financial quantitative theory and practice, bridging the two and using both the fundamental concepts of finance and the stochastic and optimization methods and software in finance. This track is meant for those individuals with a strong desire to become quantitative financial managers or to pursue applied finance research interests in cutting-edge investment science, trading and in financial risk management. Techniques such as quantitative finance, financial econometrics, stochastic modeling, simulation and optimization are part of a set of financial tools applied to the many problems of derivatives and options finance, arbitrage trading algorithms, asset pricing, credit risk and credit derivatives, developing new derivative products and the many areas where quant finance has a contribution to make.
Graduates of the Computational Finance Track will be qualified to work in pricing financial risk and their management, in credit risk and their derivatives, in cutting-edge institutions, in quant hedge funds and in research and advanced product development departments of financial and consulting firms. Graduates of the Risk Finance Track will have the qualification and abilities to become responsible specialists for positions in finance, credit granting firms, banks and insurance companies, as well as obtain the knowledge needed to face the upcoming complex problems arising by the increased use and centrality of financial insurance products (contributing to the development of complex financial products and a convergence) of finance and insurance. The complementary actuarial profession is a discipline that uses tools from statistics, probability theory and finance to analyze and solve practical problems in insurance and financial risk management. Actuaries assemble and analyze data to estimate the probability and likely cost of an event such as death, sickness, injury, disability or loss of property. Courses in risk finance provide the background for the first four actuarial examinations supervised by the Society of Actuaries and the Casualty Actuarial Society and cover additional educational experience requirements. The department both supports and encourages students in their preparation for and the acquisition of such certificates as these are important elements in job-seeking in the insurance-quant sector.

NYU-Poly’s Master of Science in Financial Engineering brings together four key areas: finance and related business disciplines, quantitative analysis (mathematics and statistics), information technology (telecommunications and computer science) and management. In addition, it provides an opportunity to attend to the many areas of business and management where finance is an essential element.

The financial and practical component of the educational program has been further strengthened by developing a large and versatile body of adjunct faculty consisting of leading financial market practitioners from major Wall Street firms and international professors’ affiliates. These adjunct faculty members work closely with NYU-Poly’s full-time faculty emphasizing both applied and theoretical research in bringing to financial engineering students a greater sensitivity to the needs and the demands of financial markets and the management of financial services and institutions.

Admissions

The Master of Science in Financial Engineering at Polytechnic Institute is very highly selective. All applicants must present transcripts from all colleges and universities they have attended as well as GRE (Graduate Record Exam) or GMAT (Graduate Management Admission Test) test scores; there are no exceptions to this rule. (Please note that the department strongly prefers GRE scores over GMAT scores.) Applicants who have undergraduate average above 3.0 or a master’s degree and also have a GRE or GMAT quantitative score that is superior and a verbal score that shows competence in English are considered for admission. Completed applications must be received by Polytechnic by April 1 for consideration for the fall semester or by October 15 for consideration for the spring semester.

For the GRE or GMAT, the institution code is 2668; a department code is not necessary. Additionally, the applicant must have sufficient proficiency and aptitude in mathematics. This may be demonstrated by grades earned in relevant course work and/or standardized examinations. This criterion is not entirely objective and will be established by the Academic Director. Applicants who meet the above criteria are by no means guaranteed admission, which is also based on a competitive performance of applicants.

Two letters of recommendation are also required for admission. The student must demonstrate a proficiency in the English language as measured by verbal scores on the GRE or GMAT or successfully complete a series of ESL courses in order to commence formal study.

The Graduate Certificates associated with the Financial Engineering Program have the same application requirements and prerequisites as the Master of Science degree.

Applicants requesting admission for study only in a particular course or group of courses are given Special or Visiting Student Status, which permits registration, generally for a limited duration, in those courses indicated by the approval of admission. Registration is limited to 6 credits per semester. If additional courses are desired after the end of the specified period, a new admission request must be filed through the admissions office. Special Status students who later apply for and are accepted to the master’s or certificate program may transfer up to 9 credits taken while on Special Status. Special Status students are expected to
complete the GRE or GMAT exam before applying for admission to MS FE or any associated Graduate Certificate. The GPA earned as a Special Status student will be used as part of the admissions decision in place of the undergraduate GPA.

Individuals interested in applying for admissions to either the Master of Science in Financial Engineering or the Graduate Certificate Program please visit the Graduate Admissions website page at www.poly.edu/graduate. The site has a downloadable application and information on tuition and financial aid.

Undergraduate Minor

The Department of Finance and Risk Engineering offers an Undergraduate Minor in Finance. The intent of this program of study is to allow NYU-Poly undergraduate students in the sciences and engineering to leverage their mathematical talents in a selected number of appropriate courses. For more information on the Finance Minor, contact Prof. Barry Blecherman at (718) 260-3398 or blecherman@poly.edu.

Faculty

Professors

Charles S. Tapiero, The Morton and Angela Topfer Distinguished Professor in Financial Engineering and Technology Management, Department Head of Finance and Risk Engineering
PhD, New York University
MBA New York University B. App. Science (Electrical Engineering), Polytechnique-University of Montreal
Financial engineering, business and operations risks engineering and management

Nassim Nicholas Taleb, Distinguished Professor of Risk Engineering
PhD, University of Paris (Paris 9Dauphine),
MBA, Wharton School, University of Pennsylvania
Domestication of the unknown, philosophy of chance, uncertainty and probability

Assistant Professor

Philip Maymin, Assistant Professor of Risk Engineering
PhD, University of Chicago
Alternative and behavioral finance

Industry Faculty

Franziska Berger, Industry Assistant Professor of Mathematics and Financial and Risk Engineering
PhD, Munich University of Technology Discrete mathematics

Barry S. Blecherman, Industry Professor of Financial Engineering
PhD, Wharton School of the University of Pennsylvania
Information economics and strategy, decision theory, business negotiations

Fredrick Novomestky, Industry Professor of Financial Engineering
PhD, Polytechnic Institute of Brooklyn
Asset/liability modeling and management, evolutionary computational algorithms for mathematical optimization, multiple criteria decision making models, quantitative investment strategy
Research Fellow

Anne Zissu, Research Fellow
PhD, The Graduate School and University
Center of the City University of New York Corporate finance, risk management, securitization

Adjunct Faculty

Sassan Alizadeh, Adjunct Associate Professor of Financial Engineering
PhD, Wharton School of the University of Pennsylvania
Term-structure model, quantitative trading strategies

Lucas Bernard, Adjunct Associate Professor of Financial Engineering
PhD, The New School for Social Research
Credit derivatives, corporate finance

Paul Biederman, Adjunct Associate Professor of Financial Engineering
PhD, New School University
Financial market regulation, industry economic analysis

Robert Biolsi, Adjunct Associate Professor of Financial Engineering
PhD, City University of New York
Innovation, equity prices and commodity diversification, electricity deregulation

Jean-Carlo Bonilla, Adjunct Associate Professor of Financial Engineering
MS, Polytechnic University
Quantitative methods in finance

Peter Cai, Adjunct Associate Professor of Financial Engineering
PhD, Pennsylvania State University
Trading, hedge funds and risk engineering

Raphaelle Chappe, Adjunct Associate Professor of Financial Engineering
JD, New York University School of Law
Taxation and regulation in finance

Rohan Douglas, Adjunct Associate Professor of Financial Engineering
BSc, Sydney University (Australia)
Market theory, credit derivatives

Roy Freedman, Adjunct Associate Professor of Financial Engineering
PhD, Polytechnic Institute of New York
Evolutionary information technology, quantitative methods in finance, artificial intelligence

Sebastien Galy, Adjunct Associate Professor of Financial Engineering
PhD, Concordia University
Dynamic asset pricing, option pricing

Barry Guttenplan, Adjunct Associate Professor of Financial Engineering
MPhil, Yale University
Taxation and finance, credit derivatives
Thomas Hutchinson, Adjunct Associate Professor of Financial Engineering and Management
MA, McMaster University (Canada)
Investment banking, financial economics

Maureen Koetz, Esq., Adjunct Associate Professor of Financial Engineering
JD, Washington College of Law
Environmental finance

Andrew Kalotay, Adjunct Associate Professor of Financial Engineering
PhD, University of Toronto
Debt management, valuation of bonds, interest-rate derivatives and mortgage-backed securities

Victor Makarov, Adjunct Associate Professor of Financial Engineering
PhD, Academy of Sciences - Moscow
Value at risk, financial regulation

Steven Mandel, Adjunct Associate Professor of Financial Engineering
PhD, New York University
Risk management, portfolio optimization, return attribution

Ingrid Marshall, CPA, Adjunct Associate Professor of Financial Engineering
MBA, St. John’s University
Corporate financial accounting

Anthony Pepennella, Adjunct Associate Professor of Financial Engineering
Florida State University, Financial and Operations Principal: Series 24, NASD Registered Representative: Series 7, NASD
Financial accounting, financial statement analysis

Ronald T. Slivka, Adjunct Associate Professor of Financial Engineering
PhD, Wharton School of the University of Pennsylvania
Quantitative approaches to derivative securities valuation and applications, quantitative investment strategies

Richard Van Slyke, Adjunct Associate Professor of Financial Engineering Professor Emeritus of Computer Science
PhD, University of California, Berkeley
Financial risk optimization

Charles Stone, Adjunct Associate Professor of Financial Engineering
PhD, City University of New York
Editor of The Financier and The Securitization Conduit

Kimberly Swain, Adjunct Associate Professor of Financial Engineering
BA, University of Texas, Austin, Series 7 and 63
Infrastructure finance

Daniel Totouom-Tangho, Adjunct Associate Professor of Financial Engineering
PhD, École des Mines Paris, Polytechnique-Paris
Financial modeling, stochastic calculus

Edward Dean Weinberger, Adjunct Associate Professor of Financial Engineering
PhD, Courant Institute of Mathematical Sciences, New York University
Credit risk measurement and management

International Professors Associates

Alain Bensoussan, Polytechnic University of Hong Kong and University of Texas, Dallas
Ron Kennett, University of Torino, Italy and KPA-Israel

Konstantin Kogan, Bar Ilan University, Israel

W.K. Li, The University of Hong Kong

Bertrand Munier, ENSAM and the University of Paris I, France

Claude Pondhaven, University of Paris II, France

Fabrizio Ruggieri, Center for National Research, Milan, Italy

Aimme Scannavino, University of Paris II, France

Lorne Switzer, Concordia University, Montreal, Canada

Pierre Vallois, University of Nancy, France

**Financial Engineering**

*Program Director:* Charles Tapiero  
*Program Co-Director:* Barry Blecherman

**Master's in Financial Engineering**

Financial engineering seeks to bridge theoretical finance and its practice. This concept underpins the NYU-Poly MS program in financial engineering. The goals and objectives of the program are to train and prepare our students for fast-moving and highly rewarding careers that create value enabled by finance, technology, computational finance and engineering risk finance. Careers and employment opportunities include trading, investments, financial risk management, pricing as well as corporate financial positions in a broad array of firms such as financial services, insurance, industrial and business firms.

To these ends, the Department of Finance and Risk Engineering offers in its MS in Financial Engineering Program a wide range of graduate-level courses including: Quantitative Finance, Economics, Financial Markets and Corporate Finance, Financial Econometrics, Behavioral Finance, Credit Risk and Credit Derivatives, Financial Insurance, High Frequency Trading, Agent-Based Modeling, Financial Technology, Risk Management, Risk Analysis and Assessment in Financial Services, Financial Regulation, OpRisk, Stochastic Finance Calculus and Stochastic Financial Modeling. Both financial and economic theories are then applied to the complex problems financial engineers confront including: Fixed Income, Derivatives, Credit Risk and Credit Derivatives and Securitization. In addition, the department offers a wide range of financial labs and Bloomberg assisted classes, topical and advanced courses including: Personal Finance, Financial Management, Algorithmic Trading, Environmental and Infrastructure Finance, Rare Events and Uncommon Risks Finance, Data Mining and Intelligent Finance.

These courses form a major portion of the course work for an advanced degree in financial engineering and bridge the gap between theoretical and applied finance. A limited number of courses may also be taken by students in other departments and at NYU (subject to approval by the Finance and Risk Engineering Department) to satisfy elective requirements.

The department has a Research Institute that emphasizes specialized research areas and provides research opportunities to students. These include:

- Research on personal finance and investments, the finance of rare and uncommon risks, financial regulation, real finance and business policy, alternatives finance as well as topical projects pursued by students and faculty.
- Research that emphasizes trading platforms and software development and the management of financial technology as well as related topics. The Institute is a research hub and laboratory for generating new industry ideas and tools. It also undertakes collaborative research projects to provide ideas, methods and tools with scholarly and practical applications.
Graduate Certificate Programs

The Graduate Certificate programs have the same application requirements and prerequisites as the Master of Science degree.

Undergraduates in Graduate FRE Courses

The Department of Finance and Risk Engineering does not permit undergraduates to take courses with the prefix “FRE”; these are graduate courses reserved for graduate students. Exceptions are made only for sub-matriculated undergraduates; undergraduates who have applied to and been accepted to the MS FE program at NYU-Poly in their senior year of undergraduate studies. No other exceptions are made.

Minor

Finance Minor

The Department of Finance and Risk Engineering offers an undergraduate minor in finance to NYU-Poly engineering, mathematics, computer science and natural science students. To complete this minor, students must pass 15 credits of courses designated “FIN”. Included in this total must be FIN 2003, FIN 2103 and FIN 2203. The remaining credits can be chosen from courses in FIN at the 3000-level or 4000-level. The residency requirement for this minor is 9 credits; no more than 6 credits of study towards the minor may be transferred from another institution.

Graduate Certificate

Financial Engineering Graduate Certificate

The Graduate Certificate programs have the same application requirements and prerequisites as the Master of Science degree.

Graduate Certificate Program in Financial Engineering Program

Prerequisites

Ease of use of the following material:

Calculus MA 1124 or equivalent

Probability/Statistics MA 2212 and MA 2222, or equivalent

Knowledge of spreadsheets expected and some exposure to computer-programming languages is required. A GRE score must be submitted for an application to be considered; a GMAT may be substituted but the GRE is strongly preferred.

Financial Engineering Certificate Credits
FRE 6083 Quantitative Methods in Finance

3 Credits This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6103 Corporate Finance

3 Credits The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6411 Fixed Income Securities and Interest Rate Derivatives

1.5 Credits This course examines the body of analytical tools and measures that constitute modern fixed-income markets. The valuation of interest-rate sensitive cash flows is the unifying theme. Major topics include theories of term structure, institutional aspects of fixed-income markets and analytical techniques for managing interest-rate risk. Bond refunding, defeasance, corporate bonds, forwards, futures, options and interest-rate swaps are discussed. The course gives an overview of the major classes of fixed-income securities and the markets in which they trade. Among the major classes of fixed-income instruments discussed are Treasury and agency securities, mortgage-backed securities (including CMOs and Strips), asset-backed securities, municipals, floating and inverse floating rate securities.

Prerequisite(s): FRE 6023, FRE 6083 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6291 Applied Derivative Contracts

1.5 Credits This course provides an introduction to derivative contracts with a special emphasis on current practical applications in use today by financial institutions for investing, hedging, trading and issuing. The characteristics and features of futures, forwards, swaps, options and structured notes are all covered with a special emphasis on useful applications. For each of the four primary derivative contracts, we review in these lectures the appropriate definitions, terminology, market mechanics and theoretical fair value pricing.

Prerequisite(s): FRE 6003, FRE 6023, FRE 6103 and graduate standing
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6511 Derivatives Algorithms
1.5 Credits This course focuses on the algorithms behind derivatives valuation and applications. The focus is on the principles and practice of financial engineering and risk management and on developing intuition: understanding the reasons for the existence of the product, simulating possible paths and possible parameter values as an exploratory process, approximating complex derivatives as a combination of simpler ones, and attempting to replicate the payout. The goal is to prepare students to be able to evaluate an arbitrary derivative given only its term sheet. To that end, the course requires a project almost every week. Projects can be done in any programming language (Excel, Mathematica, R, Python, etc.), but the final result must be stand-alone tables and graphs. The primary prerequisite is familiarity with standard option pricing and Greeks. A portion of the final exam may involve a live computation project.

Prerequisite(s): FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6711 Investment Theory and Applications

1.5 Credits This course examines in-depth modern portfolio theory and investment selection. It considers the mathematics of portfolio analysis, single-period risk and return measures and the process of optimal portfolio selection. The basic portfolio model is extended to consider alternative risk concepts and multi-period portfolio horizons. Single-factor and multifactor models are discussed. Optimization techniques, such as linear programming and quadratic programming, are applied. The basic portfolio model is extended to explain hedging theory and to build firm-wide risk management models.

Prerequisite(s): FRE 6411 and FRE 6511.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Free elective 1.5 Credits
- Lab 1.5 Credits

To satisfy the 1.5 credits of lab required, students choose one of the following labs:

FRE 6811 Financial Software Laboratory

1.5 Credits This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6821 Financial Econometrics Laboratory

1.5 Credits This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6831 Computational Finance Laboratory

1.5 Credits This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.
FRE 6861 Financial Software Engineering

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total: 15 Credits

Financial Risk Management Graduate Certificate

The Graduate Certificate programs have the same application requirements and prerequisites as the Master of Science degree.

Graduate Certificate Program in Financial Risk Management Program

Prerequisites

Calculus MA 1124 or equivalent
Probability/Statistics MA 2212 and MA 2222, or equivalent
Linear Algebra MA 2012 or equivalent

Knowledge of spreadsheets is expected and some exposure to computer-programming languages is required. A GRE score must be submitted for an application to be considered; a GMAT may be substituted but the GRE is strongly preferred.

Risk Management Certificate Credits

FRE 6123 Financial Risk Management and Asset Pricing

3 Credits This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial
models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6271 Valuation of Equity Securities and Financial Statement Analysis**

1.5 Credits This course examines in detail the tools and techniques for analyzing financial statements for purposes of credit evaluation, forecasting, identifying merger candidates, enhancing the efficiency of decision making and diagnosing problem areas in the firm before crises develop. Students learn to use financial ratios to conduct duPont (i.e., decomposition) analysis, a methodology to discover sources of poor performance through interrelationships among a firm’s financial ratios.

Prerequisite(s): FRE 6003 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6411 Fixed Income Securities and Interest Rate Derivatives**

1.5 Credits This course examines the body of analytical tools and measures that constitute modern fixed-income markets. The valuation of interest-rate sensitive cash flows is the unifying theme. Major topics include theories of term structure, institutional aspects of fixed-income markets and analytical techniques for managing interest-rate risk. Bond refunding, defeasance, corporate bonds, forwards, futures, options and interest-rate swaps are discussed. The course gives an overview of the major classes of fixed-income securities and the markets in which they trade. Among the major classes of fixed-income instruments discussed are Treasury and agency securities, mortgage-backed securities (including CMOs and Strips), asset-backed securities, municipals, floating and inverse floating rate securities.

Prerequisite(s): FRE 6023, FRE 6083 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6291 Applied Derivative Contracts**

1.5 Credits This course provides an introduction to derivative contracts with a special emphasis on current practical applications in use today by financial institutions for investing, hedging, trading and issuing. The characteristics and features of futures, forwards, swaps, options and structured notes are all covered with a special emphasis on useful applications. For each of the four primary derivative contracts, we review in these lectures the appropriate definitions, terminology, market mechanics and theoretical fair value pricing.

Prerequisite(s): FRE 6003, FRE 6023, FRE 6103 and graduate standing
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6511 Derivatives Algorithms**

1.5 Credits This course focuses on the algorithms behind derivatives valuation and applications. The focus is on the principles and practice of financial engineering and risk management and on developing intuition: understanding the reasons for the existence of the product, simulating possible paths and possible parameter values as an exploratory process, approximating complex derivatives as a combination of simpler ones, and attempting to replicate the payout. The goal is to prepare students to be able to evaluate an arbitrary derivative given only its term sheet. to that end, the course requires a project almost every week. Projects can be done in any programming language (Excel, Mathematica, R, Python, etc.), but the final result must be stand-alone tables and graphs. The primary prerequisite is familiarity with standard option pricing and Greeks. A portion of the final exam
may involve a live computation project.

**Prerequisite(s):** FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6711 Investment Theory and Applications**

1.5 Credits This course examines in-depth modern portfolio theory and investment selection. It considers the mathematics of portfolio analysis, single-period risk and return measures and the process of optimal portfolio selection. The basic portfolio model is extended to consider alternative risk concepts and multi-period portfolio horizons. Single-factor and multifactor models are discussed. Optimization techniques, such as linear programming and quadratic programming, are applied. The basic portfolio model is extended to explain hedging theory and to build firm-wide risk management models.

**Prerequisite(s):** FRE 6411 and FRE 6511.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6731 Basel 2 and Value at Risk**

1.5 Credits This course addresses financial risk management and particularly focuses on Basel 2 directives and Value at Risk (VaR), a method to assess risk that employs standard statistical techniques routinely used in other fields. VaR analysis is used by bank and corporate managers and by financial market regulators.

**Corequisite(s):** FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6751 Credit Risk Measurement and Management**

1.5 Credits This course deals with issues in credit-risk measurement, credit-risk management and related areas in which credit considerations are important. These issues arise in credit-rating activity, credit extension by banks and other financial services and in derivative markets where counter-party risk is perceived to be an important management issue.

**Corequisite(s):** FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6791 Operational Risk Measurement and Management**

1.5 Credits The operational difficulties faced by financial institutions have created a need for tools to measure and manage operational risk. An accurate appreciation of risks, exposures and controls is critical to managing risk effectively in today’s dynamic global business environment. This course examines the effects of transaction processing, liquidity management, organizational structure, personnel and compliance on the nature of operational risk. Qualitative and quantitative measures of operational risk are discussed.

**Prerequisite(s):** FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Free elective 1.5 Credits
- Lab 1.5 Credits
To satisfy the 1.5 credits of lab required, students choose one of the following labs:

FRE 6811 Financial Software Laboratory

1.5 Credits This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6821 Financial Econometrics Laboratory

1.5 Credits This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6831 Computational Finance Laboratory

1.5 Credits This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6861 Financial Software Engineering

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total Credits: 18

Financial Technology Management Graduate Certificate
The Graduate Certificate programs have the same application requirements and prerequisites as the Master of Science degree.

**Graduate Certificate Program in Financial Technology Management**

**Program Prerequisites**

Financial Accounting: FRE 6003 or equivalent

Economics: FIN 2003 or equivalent

Probability/Statistics: MA 2212 and MA 2222, or equivalent

Knowledge of spreadsheets is expected and some exposure to computer-programming languages is required. A GRE score must be submitted for an application to be considered; a GMAT may be substituted but the GRE is strongly preferred.

**Financial Technology Management Certificate Credits**

**FRE 6123 Financial Risk Management and Asset Pricing**

3 Credits This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6151 Foundations of Financial Technology**

1.5 Credits Every year, financial institutions spend billions to exploit the latest development in information technology. This course introduces a framework with which to understand and leverage information technology. The technology components covered include telecommunications, groupware, imaging and document processing, artificial intelligence and object-oriented analysis and design. The course also covers the entire technological-planning process specifically for financial institutions.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6861 Financial Software Engineering**

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and
business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and 6 of the following courses:

**FRE 6041 Risk Management in the Real World**

*1.5 Credits* The course covers failures of financial theory in risk management, deriving from fundamental definitions and assumptions in modeling, including pricing formulae; convexity; stochasticity and volatility; "fat tails"; and risk. Other topics: Portfolio robustness and extreme markets and moral hazard; datamining biases and decision error; and decision-making with incomplete information.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6131 Clearing and Settlement and Operational Risk**

*1.5 Credits* This course focuses on issues involved in processing financial transactions—from order execution to final settlement of transactions—and operational risk in general. The course examines the procedures and market conventions for processing, verifying, and confirming completed transactions; resolving conflicts; decisions involved in developing clearing operations or purchasing clearing services; the role played by clearing houses; and numerous issues associated with cross-border transactions. The course also examines the effects of transaction processing, liquidity management, organizational structure, and personnel and compliance on the nature of operational risk. Qualitative and quantitative measures of operational risk are discussed.

*Prerequisite(s):* FRE 6151.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6251 Numerical and Simulation Techniques in Finance**

*1.5 Credits* The course presents advanced numerical techniques to solve ordinary, partial and stochastic differential equations. These techniques are analyzed mathematically and use computer aided software that allows for the solution and the handling of such problems. In addition, the course introduces techniques for Monte Carlo simulation techniques and their use to deal with theoretically complex financial products in a tractable and practical manner. Both self-writing of software as well as using outstanding computer programs routinely employed in financial and insurance industries will be used.

*Prerequisite(s):* FRE 6083.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6451 Behavioral Finance**

*1.5 Credits* This course discusses investors’ systematic deviations from the level of financial rationality assumed by modern financial theory. Such biased behavior can lead to market inefficiencies, market opportunities and market failure. After a brief introduction to the topic and its research history, the course focuses on the limits to arbitrage created by decision bias, the equity premium puzzle, market over-reaction and under-reaction. The course seeks to understand how and where opportunities for and threats to wealth accumulation exist as a result of the mismatch between investor behavior and the assumptions about investment behavior inherent in financial theory.
FRE 6511 Derivatives Algorithms

1.5 Credits This course focuses on the algorithms behind derivatives valuation and applications. The focus is on the principles and practice of financial engineering and risk management and on developing intuition: understanding the reasons for the existence of the product, simulating possible paths and possible parameter values as an exploratory process, approximating complex derivatives as a combination of simpler ones, and attempting to replicate the payout. The goal is to prepare students to be able to evaluate an arbitrary derivative given only its term sheet. To that end, the course requires a project almost every week. Projects can be done in any programming language (Excel, Mathematica, R, Python, etc.), but the final result must be stand-alone tables and graphs. The primary prerequisite is familiarity with standard option pricing and Greeks. A portion of the final exam may involve a live computation project.

Prerequisite(s): FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7211 Forensic Financial Technology and Regulatory Systems

1.5 Credits The goal of this course is to understand the technology behind financial forensics and regulatory systems. These include innovative database techniques (“dataveillance”), artificial intelligence, data mining, and non-parametric outlier methods used by the Securities Exchange Commission (SEC), the Financial Industry Regulatory Authority (FINRA), as well as the FBI, and other federal and state agencies. Students will learn how to incorporate these technologies in the regulatory environment of the future. Student teams will prepare and present projects or case studies applying the concepts covered in class.

Prerequisite(s): FRE 6151.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7221 Databases and Financial Information Technology

1.5 Credits This is an advanced course on practical computer science topics most relevant to financial applications. As such it covers fundamental concepts such as database design, use, and maintenance, algorithmic complexity and efficiency considerations, memory optimization and grid performance, and, primarily, the use and importance of financial specification languages such as MDDL and FpML and financial communication standards such as FIX. Students will work on numerous projects, including attaining hands-on experience with a FIX engine.

Prerequisite(s): FRE 6151.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7241 Algorithmic Portfolio Management

1.5 Credits This course focuses on portfolio construction and rebalancing strategies such as momentum, value, and size strategies, among others. The course emphasizes back-testing and risk factor analysis as well as optimization to reduce tracking error. It will also address how a quantitative investment approach can help both individual and institutional investors make sound long-term investment decisions.
FRE 7251 Algorithmic Trading and High-Frequency Finance

1.5 Credits Algorithmic trading refers to the utilization of special computer programs in an order management system that restructure an order into a sequence of sub-orders based on the dimensions of submission time, price, size, and side. The goal of this course is to survey several algorithmic strategies used by financial institutions and to understand their implementation in the context of order management systems and standard financial protocols (such as FIX and FIXatdl). Student teams will prepare and present projects or case studies applying the concepts covered in class.

Prerequisite(s): FRE 6151 and FRE 7221.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7261 News Analytics and Strategies

1.5 Credits The fast-growing field of news analytics requires large databases, fast computation, and robust statistics. This course introduces the tools and techniques of analyzing news, how to quantify textual items based on, for example, positive or negative sentiment, relevance to each stock, and the amount of novelty in the content. Applications to trading strategies are discussed, including both absolute and relative return strategies, and risk management strategies. Students will be exposed to leading software in this cutting-edge space.

Prerequisite(s): FRE 6151 and FRE 7221.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Total: 15 Credits

Risk Management Graduate Certificate

The Graduate Certificate programs have the same application requirements and prerequisites as the Master of Science degree.

Risk Management Certificate Credits

FRE 6123 Financial Risk Management and Asset Pricing

3 Credits This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.
FRE 6411 Fixed Income Securities and Interest Rate Derivatives

1.5 Credits This course examines the body of analytical tools and measures that constitute modern fixed-income markets. The valuation of interest-rate sensitive cash flows is the unifying theme. Major topics include theories of term structure, institutional aspects of fixed-income markets and analytical techniques for managing interest-rate risk. Bond refunding, defeasance, corporate bonds, forwards, futures, options and interest-rate swaps are discussed. The course gives an overview of the major classes of fixed-income securities and the markets in which they trade. Among the major classes of fixed-income instruments discussed are Treasury and agency securities, mortgage-backed securities (including CMOs and Strips), asset-backed securities, municipals, floating and inverse floating rate securities.

Prerequisite(s): FRE 6023, FRE 6083 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6291 Applied Derivative Contracts

1.5 Credits This course provides an introduction to derivative contracts with a special emphasis on current practical applications in use today by financial institutions for investing, hedging, trading and issuing. The characteristics and features of futures, forwards, swaps, options and structured notes are all covered with a special emphasis on useful applications. For each of the four primary derivative contracts, we review in these lectures the appropriate definitions, terminology, market mechanics and theoretical fair value pricing.

Prerequisite(s): FRE 6003, FRE 6023, FRE 6103 and graduate standing
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6511 Derivatives Algorithms

1.5 Credits This course focuses on the algorithms behind derivatives valuation and applications. The focus is on the principles and practice of financial engineering and risk management and on developing intuition: understanding the reasons for the existence of the product, simulating possible paths and possible parameter values as an exploratory process, approximating complex derivatives as a combination of simpler ones, and attempting to replicate the payout. The goal is to prepare students to be able to evaluate an arbitrary derivative given only its term sheet. To that end, the course requires a project almost every week. Projects can be done in any programming language (Excel, Mathematica, R, Python, etc.), but the final result must be stand-alone tables and graphs. The primary prerequisite is familiarity with standard option pricing and Greeks. A portion of the final exam may involve a live computation project.

Prerequisite(s): FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6711 Investment Theory and Applications

1.5 Credits This course examines in-depth modern portfolio theory and investment selection. It considers the mathematics of portfolio analysis, single-period risk and return measures and the process of optimal portfolio selection. The basic portfolio model is extended to consider alternative risk concepts and multi-period portfolio horizons. Single-factor and multifactor models are discussed. Optimization techniques, such as linear programming and quadratic programming, are applied. The basic portfolio model is extended to explain hedging theory and to build firm-wide risk management models.
Prerequisite(s): FRE 6411 and FRE 6511.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6731 Basel 2 and Value at Risk

1.5 Credits This course addresses financial risk management and particularly focuses on Basel 2 directives and Value at Risk (VaR), a method to assess risk that employs standard statistical techniques routinely used in other fields. VaR analysis is used by bank and corporate managers and by financial market regulators.

Corequisite(s): FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6751 Credit Risk Measurement and Management

1.5 Credits This course deals with issues in credit-risk measurement, credit-risk management and related areas in which credit considerations are important. These issues arise in credit-rating activity, credit extension by banks and other financial services and in derivative markets where counter-party risk is perceived to be an important management issue.

Masters

Financial Engineering, Computational Finance Track, M.S.

Requirements for the Master of Science

A Bachelor’s degree is required for admission to this program. It is expected that students will have superior mathematical talent. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, conditionally approved students must demonstrate proficiency in basic statistics, probability and mathematics. The Department makes available refresher courses for this purpose and to serve the population of students who have been out of academia prior to matriculating into this program. Prerequisites: GRE exam scores (GMAT may be substituted, but GRE is strongly preferred), Calculus (MA 1124 or equivalent) Probability and Statistics (MA 2212 and MA 2222 or equivalent), and Linear Algebra (MA 2012 or equivalent).
Master's in Financial Engineering: 33 Credits

All tracks include in their program:

- 5 core courses, each 3 Credits
- Track required courses totaling 7.5 Credits
- 1 required applied lab, worth 1.5 Credits
- 4 elective courses, each 1.5 Credits
- 1 Capstone Experience of 3 Credits

All MS Financial Engineering students must also complete the Bloomberg Essentials Online Training Program to be qualified for graduation. The Department of Finance and Risk Engineering supports students’ efforts in this area by providing many Bloomberg terminals and laboratory assistants to answer student questions. This is a zero-credit requirement that is listed here as FRE 5500.

Core Courses (Required):

FRE 6003 Financial Accounting

3 Credits This course provides a solid foundation in the construction and interpretation of financial statements. Topics include accounting terminology; financial statement preparation and analysis; liquidity and credit risk ratios; depreciation calculations; revenue recognition; and accrued liabilities and asset valuation. Also covered are the effects of equity transactions; cash flows; and various accounting methods on financial statements.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6023 Economic Foundations in Finance

3 Credits This course studies the interactions between money, the financial system and the economy. Topics include supply and demand; consumer theory; theory of the firm; production costs and other subject areas such as interest rates and asset returns. This course summarizes key insights from financial economics as the methodological and conceptual basis of financial engineering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6103 Corporate Finance

3 Credits The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6123 Financial Risk Management and Asset Pricing
This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6083 Quantitative Methods in Finance

This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

* For Risk Finance the 6 credits comprising FRE 6003 and FRE 6083 are replaced by FRE 6021, FRE 6051, and FRE 6223.

All tracks: Core courses = 15 Credits.

Incoming MS students of Financial Engineering have four track options. Each track has required courses totaling 7.5 credits (except Risk Finance which requires 10.5 credits).

- Financial Markets and Corporate Finance
- Computational Finance
- Technology and Algorithmic Finance
- Risk Finance (Credit Risk, Financial Management and Insurance)

Required Labs per Track: 1.5 Credits

Students from all tracks must choose one of the following labs for 1.5 credits:

FRE 6811 Financial Software Laboratory

1.5 Credits This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6821 Financial Econometrics Laboratory
1.5 Credits This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6831 Computational Finance Laboratory

1.5 Credits This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6861 Financial Software Engineering

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Certification: 0 Credits

All students must complete the following certification:

FRE 5500 Bloomberg Certification

0 Credits The required Bloomberg certification is a self-taught, self-paced process available on any Bloomberg terminal. Upon completion and receipt of the certification, the student’s requirement in this area will be deemed complete. This requirement can be completed at any time prior to the end of the financial lab course, even before beginning the Master’s in Financial Engineering program if a student so chooses, but no later than the last class of the semester in which the lab course is taken.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Capstone Options: 3 Credits

FRE 9973 MS Thesis in Finance & Risk Engineering

3 Credits In this research course, students undertake proprietary or non-proprietary research and write a thesis-type research paper. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within guidelines established by the supervising faculty member.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s
track and the nature of the thesis project.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7023 Financial Engineering Capstone: Internship**

*3 Credits* In this course, the Career Management Center helps the student to secure an internship. Students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A paper based on the internship work is required. This course is graded on the S/U basis.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the internship.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7043 Financial Engineering Capstone: Project**

*3 Credits* In this project course, students work with faculty on proprietary or non-proprietary research projects. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A significant written research component is required.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the project to be undertaken.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Two special topics courses at 1.5 credits each, with a capstone paper submitted to the faculty.

**Computational Finance Track**

Five of the following six courses:

**FRE 6231 Stochastic Calculus and Financial Modeling**

*1.5 Credits* This course extends the core course FE6083 to Stochastic Calculus in Finance, emphasizing the modeling approach and resolution of important problems in derivatives finance, in pricing assets and complex financial products. In addition, cases highlighting the impact of theoretical finance on market trading, investment and portfolio management and related problems are emphasized. Some of the techniques used include Markov chains, random walks, stochastic differential equations and Ito Calculus, optimal stochastic control and stochastic dynamic programming as well as Monte Carlo simulation. These techniques are applied to selected financial engineering models to assess and simulate (using MATLAB and other software) essential derivative and related problems of practical importance in finance.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6251 Numerical and Simulation Techniques in Finance**
1.5 Credits The course presents advanced numerical techniques to solve ordinary, partial and stochastic differential equations. These techniques are analyzed mathematically and use computer aided software that allows for the solution and the handling of such problems. In addition, the course introduces techniques for Monte Carlo simulation techniques and their use to deal with theoretically complex financial products in a tractable and practical manner. Both self-writing of software as well as using outstanding computer programs routinely employed in financial and insurance industries will be used.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6311 Dynamic Assets and Options Pricing

1.5 Credits The course focuses on inter-temporal assets pricing in discrete and continuous time. The course explores problems in complete and incomplete markets of both theoretical and practical interest that require an appreciation of financial economic theories and computational techniques. Financial-engineering techniques are introduced including Martingales, stochastic calculus and jump processes; these are applied to engineering problems in finance. Problems and cases are presented that span Stocks and Derivatives (options of various sorts), Bonds and Implied Risk-Neutral Pricing.

Prerequisite(s): FRE 6083 and FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6331 Financial Risk Management and Optimization

1.5 Credits This course provides solutions to the inter-temporal problems in financial management including management of portfolios, credit risks and market making. Dynamic and stochastic dynamic programming techniques as well as optimal control and stochastic control principles of optimality are presented, and their financial contexts emphasized. Both theoretical and practical facets of inter-temporal management of financial risks and risk pricing are also stressed. The course uses financial and optimization software to solve problems practically.

Prerequisite(s): FRE 6083, FRE 6091 and FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6351 Advanced Financial Econometrics

1.5 Credits Financial econometrics has matured into a necessary and essential part of financial engineering that provides opportunities to deal with real and practical problems in finance. For example, techniques such as ARCH and GARCH and their subsequent development are used to estimate the volatility of underlying financial processes; the analysis of intraday trading data that requires particular models and techniques; memory-based and fractal stochastic processes to study complex markets behaviors and copulas applied routinely to model- and estimate-dependent risks. These financial and risk problems require the application of advanced financial-econometric techniques, which the course provides from both theoretical and empirical-applied viewpoints. Selected cases provide a real-world sense of financial engineering when it is faced with financial-market reality and complexity.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6041 Risk Management in the Real World
1.5 Credits The course covers failures of financial theory in risk management, deriving from fundamental definitions and assumptions in modeling, including pricing formulae; convexity; stochasticity and volatility; “fat tails”; and risk. Other topics: Portfolio robustness and extreme markets and moral hazard; datamining biases and decision error; and decision-making with incomplete information.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Credit Allocation for Financial Markets and Corporate Finance, Computational Finance, and Financial Information Services and Technology tracks:

Core Courses: 15

Required Courses: 7.5

Elective Credits: 6

Lab: 1.5

Capstone: 3

Total Credits: 33

All these options require a review by faculty advisers and certification of satisfactory work.

Financial Engineering, Financial Markets and Corporate Finance Track, M.S.

Requirements for the Master of Science

A Bachelor’s degree is required for admission to this program. It is expected that students will have superior mathematical talent. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, conditionally approved students must demonstrate proficiency in basic statistics, probability and mathematics. The Department makes available refresher courses for this purpose and to serve the population of students who have been out of academia prior to matriculating into this program. Prerequisites: GRE exam scores (GMAT may be substituted, but GRE is strongly preferred), Calculus (MA 1124 or equivalent) Probability and Statistics (MA 2212 and MA 2222 or equivalent), and Linear Algebra (MA 2012 or equivalent).

Master's in Financial Engineering: 33 Credits

All tracks include in their program:

- 5 core courses, each 3 Credits
- Track required courses totaling 7.5 Credits
- 1 required applied lab, worth 1.5 Credits
- 4 elective courses, each 1.5 Credits
• 1 Capstone Experience of 3 Credits

All MS Financial Engineering students must also complete the Bloomberg Essentials Online Training Program to be qualified for graduation. The Department of Finance and Risk Engineering supports students’ efforts in this area by providing many Bloomberg terminals and laboratory assistants to answer student questions. This is a zero-credit requirement that is listed here as FRE 5500.

Core Courses (Required):

**FRE 6003 Financial Accounting**

*3 Credits* This course provides a solid foundation in the construction and interpretation of financial statements. Topics include accounting terminology; financial statement preparation and analysis; liquidity and credit risk ratios; depreciation calculations; revenue recognition; and accrued liabilities and asset valuation. Also covered are the effects of equity transactions; cash flows; and various accounting methods on financial statements.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6023 Economic Foundations in Finance**

*3 Credits* This course studies the interactions between money, the financial system and the economy. Topics include supply and demand; consumer theory; theory of the firm; production costs and other subject areas such as interest rates and asset returns. This course summarizes key insights from financial economics as the methodological and conceptual basis of financial engineering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6103 Corporate Finance**

*3 Credits* The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6123 Financial Risk Management and Asset Pricing**

*3 Credits* This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.
FRE 6083 Quantitative Methods in Finance

3 Credits This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.

Note:

* For Risk Finance the 6 credits comprising FRE 6003 and FRE 6083 are replaced by FRE 6021, FRE 6051, and FRE 6223.

All tracks: Core courses = 15 Credits.

Incoming MS students of Financial Engineering have four track options. Each track has required courses totaling 7.5 credits (except Risk Finance which requires 10.5 credits).

- Financial Markets and Corporate Finance
- Computational Finance
- Technology and Algorithmic Finance
- Risk Finance (Credit Risk, Financial Management and Insurance)

Required Labs per Track: 1.5 Credits

Students from all tracks must choose one of the following labs for 1.5 credits:

FRE 6811 Financial Software Laboratory

1.5 Credits This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6821 Financial Econometrics Laboratory

1.5 Credits This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6831 Computational Finance Laboratory
1.5 Credits This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6861 Financial Software Engineering

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Certification: 0 Credits

All students must complete the following certification:

FRE 5500 Bloomberg Certification

0 Credits The required Bloomberg certification is a self-taught, self-paced process available on any Bloomberg terminal. Upon completion and receipt of the certification, the student’s requirement in this area will be deemed complete. This requirement can be completed at any time prior to the end of the financial lab course, even before beginning the Master’s in Financial Engineering program if a student so chooses, but no later than the last class of the semester in which the lab course is taken.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Capstone Options: 3 Credits

FRE 9973 MS Thesis in Finance & Risk Engineering

3 Credits In this research course, students undertake proprietary or non-proprietary research and write a thesis-type research paper. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within guidelines established by the supervising faculty member.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the thesis project.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7023 Financial Engineering Capstone: Internship
3 Credits In this course, the Career Management Center helps the student to secure an internship. Students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A paper based on the internship work is required. This course is graded on the S/U basis.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the internship.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7043 Financial Engineering Capstone: Project

3 Credits In this project course, students work with faculty on proprietary or non-proprietary research projects. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A significant written research component is required.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the project to be undertaken.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Two special topics courses at 1.5 credits each, with a capstone paper submitted to the faculty.

Financial Markets and Corporate Finance Track

Five of the following six courses:

FRE 6091 Financial Econometrics

1.5 Credits This course focuses on the art and science of statistical modeling of processes applied to business, finance and economics. These may include models of aggregate economic activity, economic behavior of firm or behavior of financial assets. Topics include statistical inference; maximum likelihood estimation; method of moments; Bayesian estimation; least-squares estimation; robust estimation; kernel estimation; copula estimation; analysis of variance; linear regression models; multiple regression; logistic regression; quantile regression; time series estimation; unit root tests; bootstrapping.

Prerequisite(s): FRE 6083. Students are expected to know basic statistics.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6291 Applied Derivative Contracts

1.5 Credits This course provides an introduction to derivative contracts with a special emphasis on current practical applications in use today by financial institutions for investing, hedging, trading and issuing. The characteristics and features of futures, forwards, swaps, options and structured notes are all covered with a special emphasis on useful applications. For each of the four primary derivative contracts, we review in these lectures the appropriate definitions, terminology, market mechanics and theoretical fair value pricing.

Prerequisite(s): FRE 6003, FRE 6023, FRE 6103 and graduate standing
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
FRE 6411 Fixed Income Securities and Interest Rate Derivatives

1.5 Credits This course examines the body of analytical tools and measures that constitute modern fixed-income markets. The valuation of interest-rate sensitive cash flows is the unifying theme. Major topics include theories of term structure, institutional aspects of fixed-income markets and analytical techniques for managing interest-rate risk. Bond refunding, defeasance, corporate bonds, forwards, futures, options and interest-rate swaps are discussed. The course gives an overview of the major classes of fixed-income securities and the markets in which they trade. Among the major classes of fixed-income instruments discussed are Treasury and agency securities, mortgage-backed securities (including CMOs and Strips), asset-backed securities, municipals, floating and inverse floating rate securities.

Prerequisite(s): FRE 6023, FRE 6083 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6711 Investment Theory and Applications

1.5 Credits This course examines in-depth modern portfolio theory and investment selection. It considers the mathematics of portfolio analysis, single-period risk and return measures and the process of optimal portfolio selection. The basic portfolio model is extended to consider alternative risk concepts and multi-period portfolio horizons. Single-factor and multifactor models are discussed. Optimization techniques, such as linear programming and quadratic programming, are applied. The basic portfolio model is extended to explain hedging theory and to build firm-wide risk management models.

Prerequisite(s): FRE 6411 and FRE 6511.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6271 Valuation of Equity Securities and Financial Statement Analysis

1.5 Credits This course examines in detail the tools and techniques for analyzing financial statements for purposes of credit evaluation, forecasting, identifying merger candidates, enhancing the efficiency of decision making and diagnosing problem areas in the firm before crises develop. Students learn to use financial ratios to conduct duPont (i.e., decomposition) analysis, a methodology to discover sources of poor performance through interrelationships among a firm’s financial ratios.

Prerequisite(s): FRE 6003 and FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6041 Risk Management in the Real World

1.5 Credits The course covers failures of financial theory in risk management, deriving from fundamental definitions and assumptions in modeling, including pricing formulae; convexity; stochasticity and volatility; "fat tails"; and risk. Other topics: Portfolio robustness and extreme markets and moral hazard; datamining biases and decision error; and decision-making with incomplete information.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Credit Allocation for Financial Markets and Corporate Finance, Computational Finance, and Financial Information Services and Technology tracks:
Financial Engineering, Risk Finance Track, M.S.

Requirements for the Master of Science

A Bachelor’s degree is required for admission to this program. It is expected that students will have superior mathematical talent. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, conditionally approved students must demonstrate proficiency in basic statistics, probability and mathematics. The Department makes available refresher courses for this purpose and to serve the population of students who have been out of academia prior to matriculating into this program. Prerequisites: GRE exam scores (GMAT may be substituted, but GRE is strongly preferred), Calculus (MA 1124 or equivalent) Probability and Statistics (MA 2212 and MA 2222 or equivalent), and Linear Algebra (MA 2012 or equivalent).

Master's in Financial Engineering: 33 Credits

All tracks include in their program:

- 5 core courses, each 3 Credits
- Track required courses totaling 7.5 Credits
- 1 required applied lab, worth 1.5 Credits
- 4 elective courses, each 1.5 Credits
- 1 Capstone Experience of 3 Credits

All MS Financial Engineering students must also complete the Bloomberg Essentials Online Training Program to be qualified for graduation. The Department of Finance and Risk Engineering supports students’ efforts in this area by providing many Bloomberg terminals and laboratory assistants to answer student questions. This is a zero-credit requirement that is listed here as FRE 5500.

Core Courses (Required):

FRE 6003 Financial Accounting

3 Credits This course provides a solid foundation in the construction and interpretation of financial statements. Topics include accounting terminology; financial statement preparation and analysis; liquidity and credit risk ratios; depreciation calculations; revenue recognition; and accrued liabilities and asset valuation. Also covered are the effects of equity transactions; cash flows;
and various accounting methods on financial statements.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6023 Economic Foundations in Finance**

*3 Credits* This course studies the interactions between money, the financial system and the economy. Topics include supply and demand; consumer theory; theory of the firm; production costs and other subject areas such as interest rates and asset returns. This course summarizes key insights from financial economics as the methodological and conceptual basis of financial engineering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6103 Corporate Finance**

*3 Credits* The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6123 Financial Risk Management and Asset Pricing**

*3 Credits* This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6083 Quantitative Methods in Finance**

*3 Credits* This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Note:

* For Risk Finance the 6 credits comprising FRE 6003 and FRE 6083 are replaced by FRE 6021, FRE 6051, and FRE 6223.

**All tracks: Core courses = 15 Credits.**

Incoming MS students of Financial Engineering have four track options. Each track has required courses totaling 7.5 credits (except Risk Finance which requires 10.5 credits).

- Financial Markets and Corporate Finance
- Computational Finance
- Technology and Algorithmic Finance
- Risk Finance (Credit Risk, Financial Management and Insurance)

**Required Labs per Track: 1.5 Credits**

Students from all tracks must choose one of the following labs for 1.5 credits:

**FRE 6811 Financial Software Laboratory**

*1.5 Credits* This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6821 Financial Econometrics Laboratory**

*1.5 Credits* This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6831 Computational Finance Laboratory**

*1.5 Credits* This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6861 Financial Software Engineering**

*1.5 Credits* This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized...
procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Certification: 0 Credits

All students must complete the following certification:

FRE 5500 Bloomberg Certification

0 Credits The required Bloomberg certification is a self-taught, self-paced process available on any Bloomberg terminal. Upon completion and receipt of the certification, the student’s requirement in this area will be deemed complete. This requirement can be completed at any time prior to the end of the financial lab course, even before beginning the Master’s in Financial Engineering program if a student so chooses, but no later than the last class of the semester in which the lab course is taken.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Capstone Options: 3 Credits

FRE 9973 MS Thesis in Finance & Risk Engineering

3 Credits In this research course, students undertake proprietary or non-proprietary research and write a thesis-type research paper. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within guidelines established by the supervising faculty member.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the thesis project.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7023 Financial Engineering Capstone: Internship

3 Credits In this course, the Career Management Center helps the student to secure an internship. Students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A paper based on the internship work is required. This course is graded on the S/U basis.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the internship.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7043 Financial Engineering Capstone: Project

3 Credits In this project course, students work with faculty on proprietary or non-proprietary research projects. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A significant written research component is required.
Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the project to be undertaken.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Two special topics courses at 1.5 credits each, with a capstone paper submitted to the faculty.

Risk Finance

Note: this track has 10.5 credits of required course work, no lab requirement and fewer elective credits. Further, for this track only, the 6 credits of core courses FRE 6003 and FRE 6083 are replaced by FRE 6021, FRE 6051 and FRE 6223.

Risk Finance Track Required:

FRE 6051 Finance Insurance

1.5 Credits This course highlights essential facets of actuarial science, insurance and finance insurance. The course assumes that students are familiar with basic notions of expected utility and stochastic processes, and options pricing. Topics include Insurance Business and Insurance Firms Management; Principles of Actuarial Science and Risk Pricing by both actuarial (historic and data based) and financial approaches (based on implied estimates of future losses). The expected Utility Approach to Insurance Risk Pricing and Management is briefly reviewed and greater attention is given to financial insurance derivatives; pricing Insurance Products (Life Insurance, Casualty, Pension Funds and Defined Benefits). The course concludes with an appreciation of the Principles of Insurance Management in a Dynamic and Global Setting. Throughout, the course uses numerous cases centered on financial insurance and actuarial problems and analyzes them from a financial markets perspective. Particular problems such as insurance pension funds, CATBOND and weather (insurance) derivatives and regulation are presented as case problems.

Prerequisite(s): FRE 6103.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6491 Municipal and Public Finance

1.5 Credits This course provides an overview and analysis of the market for debt obligations of state and local governments. Topics will include the micro structure of the market, including the types of debt issued, and characteristics of the buyers. Federal and state taxation of munis will be discussed, along with industry regulatory structure. Bond structure, risk assessment and risk management using cash bonds, futures and options will be covered.

Prerequisite(s): FRE 6411.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6611 Credit Derivatives

1.5 Credits This course introduces credit derivatives and Collateralized Debt Obligations (CDO’s). The course reviews the most important credit instruments and their marketing, starting with risky bonds and credit default swaps, through basket swaps, structured products and CDO’s. Each instrument is defined and explained, including its markets, modeling, pricing and risk management. Class work is illustrated with theoretical homework and practical Excel projects.

Prerequisite(s): FRE 6411 and FRE 6511
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
FRE 6671 Global Finance

1.5 Credits This course covers the international dimensions of finance. It focuses on markets, players and instruments. It explores the main theoretical insights into the workings of the foreign exchange, international currency and bond markets, and how their integration is used to price securities.

Prerequisite(s): FRE 6411 and FRE 6511.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6731 Basel 2 and Value at Risk

1.5 Credits This course addresses financial risk management and particularly focuses on Basel 2 directives and Value at Risk (VaR), a method to assess risk that employs standard statistical techniques routinely used in other fields. VaR analysis is used by bank and corporate managers and by financial market regulators.

Corequisite(s): FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Recommended Electives* (6 Credits)

FRE 6041 Risk Management in the Real World

1.5 Credits The course covers failures of financial theory in risk management, deriving from fundamental definitions and assumptions in modeling, including pricing formulae; convexity; stochasticity and volatility; "fat tails"; and risk. Other topics: Portfolio robustness and extreme markets and moral hazard; data mining biases and decision error; and decision-making with incomplete information.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6231 Stochastic Calculus and Financial Modeling

1.5 Credits This course extends the core course FE6083 to Stochastic Calculus in Finance, emphasizing the modeling approach and resolution of important problems in derivatives finance, in pricing assets and complex financial products. In addition, cases highlighting the impact of theoretical finance on market trading, investment and portfolio management and related problems are emphasized. Some of the techniques used include Markov chains, random walks, stochastic differential equations and Ito Calculus, optimal stochastic control and stochastic dynamic programming as well as Monte Carlo simulation. These techniques are applied to selected financial engineering models to assess and simulate (using MATLAB and other software) essential derivative and related problems of practical importance in finance.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6351 Advanced Financial Econometrics
1.5 Credits Financial econometrics has matured into a necessary and essential part of financial engineering that provides opportunities to deal with real and practical problems in finance. For example, techniques such as ARCH and GARCH and their subsequent development are used to estimate the volatility of underlying financial processes; the analysis of intraday trading data that requires particular models and techniques; memory-based and fractal stochastic processes to study complex markets behaviors and copulas applied routinely to model- and estimate-dependent risks. These financial and risk problems require the application of advanced financial-econometric techniques, which the course provides from both theoretical and empirical-applied viewpoints. Selected cases provide a real-world sense of financial engineering when it is faced with financial-market reality and complexity.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6791 Operational Risk Measurement and Management

1.5 Credits The operational difficulties faced by financial institutions have created a need for tools to measure and manage operational risk. An accurate appreciation of risks, exposures and controls is critical to managing risk effectively in today’s dynamic global business environment. This course examines the effects of transaction processing, liquidity management, organizational structure, personnel and compliance on the nature of operational risk. Qualitative and quantitative measures of operational risk are discussed.

Prerequisite(s): FRE 6711.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7801 Topics in Finance and Financial Markets I

1.5 Credits Current topics of particular importance in finance and risk engineering are analyzed and discussed. Selected topics are emphasized and provide focus for further study. Examples might include Financial Economics, Macroeconomics and Finance, the Bond market, the securities markets, Derivatives markets, Contract Theory, Credit and Counterparty Risks, Banking Finance and others.

Prerequisite(s): Graduate standing and instructor’s permission.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Other appropriate special topics courses, each being 1.5 credits

*Students may choose electives from the entire portfolio of FRE graduate courses and with their advisor's permission may choose courses from other departments of NYU-Poly or schools of NYU. These listed courses are suggestions.

Financial Engineering, Technology and Algorithmic Finance Track, M.S.

Requirements for the Master of Science

A Bachelor’s degree is required for admission to this program. It is expected that students will have superior mathematical talent. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, conditionally approved students must demonstrate proficiency in basic statistics, probability and mathematics. The Department makes available refresher courses for this purpose and to serve the population of students who have been out of academia prior to matriculating into this program. Prerequisites: GRE exam scores (GMAT may be substituted, but GRE is strongly preferred), Calculus (MA 1124 or equivalent) Probability and Statistics (MA 2212 and MA 2222 or equivalent), and Linear Algebra (MA 2012 or equivalent).

Master’s in Financial Engineering: 33 Credits

All tracks include in their program:
- 5 core courses, each 3 Credits
- Track required courses totaling 7.5 Credits
- 1 required applied lab, worth 1.5 Credits
- 4 elective courses, each 1.5 Credits
- 1 Capstone Experience of 3 Credits

All MS Financial Engineering students must also complete the Bloomberg Essentials Online Training Program to be qualified for graduation. The Department of Finance and Risk Engineering supports students’ efforts in this area by providing many Bloomberg terminals and laboratory assistants to answer student questions. This is a zero-credit requirement that is listed here as FRE 5500.

Core Courses (Required):

FRE 6003 Financial Accounting

3 Credits This course provides a solid foundation in the construction and interpretation of financial statements. Topics include accounting terminology; financial statement preparation and analysis; liquidity and credit risk ratios; depreciation calculations; revenue recognition; and accrued liabilities and asset valuation. Also covered are the effects of equity transactions; cash flows; and various accounting methods on financial statements.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
This course studies the interactions between money, the financial system and the economy. Topics include supply and demand; consumer theory; theory of the firm; production costs and other subject areas such as interest rates and asset returns. This course summarizes key insights from financial economics as the methodological and conceptual basis of financial engineering.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6103 Corporate Finance**

3 Credits The modern corporation, as issuer of financial securities and end-user of financial risk management products, is a major participant in financial markets and the economic counterpart to investors and financial intermediaries. The mechanism of financial markets and the valuation of instruments are studied in further detail in other courses. However, this course applies the tools of the trade of financial economics and corporate finance to the financial decision-making process of firms. Upon successful completion of this course, students know how to contribute to optimal financial decisions in a corporation: valuation; capital budgeting; risk; capital structure; dividend policy; long-term financing; risk management; and mergers and acquisitions. Increasingly important international factors that affect corporate finance are stressed throughout.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6123 Financial Risk Management and Asset Pricing**

3 Credits This course introduces the techniques and problems of Financial Risk Management and Asset Pricing. It emphasizes risk finance and attitudes; Value at Risk; risk measurement principles; valuation and expected utility and their relevance in the valuation and the pricing of financial investments; insurance; management of derivatives; and risk management. Throughout, risk-management application problems are explored. The course introduces and focuses on the fundamental principles of the Arrow-Debreu state preference theory used to price derivatives and other assets in complete markets. Risk neutral-Binomial models in option pricing; essential elements of Ito calculus; and the Black-Scholes model for pricing options are introduced and applied to practical financial decision making and risk management problems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6083 Quantitative Methods in Finance**

3 Credits This course focuses on quantitative methods and financial modeling. Probability theory, stochastic processes and optimization are studied and applied to a broad variety of financial problems and their derivatives. Topics include probability spaces; conditional probability; densities; distributions; density estimators; multivariate probability; moment generating functions; random walks; Markov processes; Poisson processes; and the Brownian-motion process.

Prerequisite(s): Students are expected to know calculus and elementary probability.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

* For Risk Finance the 6 credits comprising FRE 6003 and FRE 6083 are replaced by FRE 6021, FRE 6051, and FRE 6223.

All tracks: Core courses = 15 Credits.
Incoming MS students of Financial Engineering have four track options. Each track has required courses totaling 7.5 credits (except Risk Finance which requires 10.5 credits).

- Financial Markets and Corporate Finance
- Computational Finance
- Technology and Algorithmic Finance
- Risk Finance (Credit Risk, Financial Management and Insurance)

Required Labs per Track: 1.5 Credits

Students from all tracks must choose one of the following labs for 1.5 credits:

**FRE 6811 Financial Software Laboratory**

1.5 Credits This course teaches students to use financial software tools commonly employed in industry. Examples include: @Risk, Yieldbook, Excel, R, and C++.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6821 Financial Econometrics Laboratory**

1.5 Credits This course teaches students to use financial econometrics software. Examples include: Eviews, Stata and others.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6831 Computational Finance Laboratory**

1.5 Credits This course teaches students to use the software tools employed in computational finance. Examples include: MATLAB, GAMS and other optimization software.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 6861 Financial Software Engineering**

1.5 Credits This financial lab requires students to publicly participate in a large software project. This participation could take the form of innovation, such as contributing to an open-source financial software project with the contributions being accepted and committed to the main branch, or invention, such as publishing a stand-alone library or package for a programming language commonly used in financial applications, or pure entrepreneurship, such as the development or updating of a brand-new industrial strength financial software application. As the students work on their project, this course will focus on important software engineering considerations specifically as they apply to the real-time world of financial projects, such as formalized procedures for revision control and bug tracking and other proven methods of software management in a fast-paced financial and business environment.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Required Certification: 0 Credits
All students must complete the following certification:

**FRE 5500 Bloomberg Certification**

0 Credits The required Bloomberg certification is a self-taught, self-paced process available on any Bloomberg terminal. Upon completion and receipt of the certification, the student’s requirement in this area will be deemed complete. This requirement can be completed at any time prior to the end of the financial lab course, even before beginning the Master’s in Financial Engineering program if a student so chooses, but no later than the last class of the semester in which the lab course is taken.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Capstone Options: 3 Credits

**FRE 9973 MS Thesis in Finance & Risk Engineering**

3 Credits In this research course, students undertake proprietary or non-proprietary research and write a thesis-type research paper. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within guidelines established by the supervising faculty member.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the thesis project.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7023 Financial Engineering Capstone: Internship**

3 Credits In this course, the Career Management Center helps the student to secure an internship. Students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A paper based on the internship work is required. This course is graded on the S/U basis.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the internship.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7043 Financial Engineering Capstone: Project**

3 Credits In this project course, students work with faculty on proprietary or non-proprietary research projects. Generally, students work under faculty supervision. However, the course is intended to be largely self-directed within the guidelines established by the supervising faculty member. A significant written research component is required.

Prerequisite(s): This course should be taken during the student’s final semester. Prerequisites vary depending on the student’s track and the nature of the project to be undertaken.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Two special topics courses at 1.5 credits each, with a capstone paper submitted to the faculty.

**Technology and Algorithmic Finance Track**
FRE 6151 Foundations of Financial Technology

1.5 Credits Every year, financial institutions spend billions to exploit the latest development in information technology. This course introduces a framework with which to understand and leverage information technology. The technology components covered include telecommunications, groupware, imaging and document processing, artificial intelligence and object-oriented analysis and design. The course also covers the entire technological-planning process specifically for financial institutions.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

and four of the following:

FRE 6041 Risk Management in the Real World

1.5 Credits The course covers failures of financial theory in risk management, deriving from fundamental definitions and assumptions in modeling, including pricing formulae; convexity; stochasticity and volatility; "fat tails"; and risk. Other topics: Portfolio robustness and extreme markets and moral hazard; datamining biases and decision error; and decision-making with incomplete information.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6131 Clearing and Settlement and Operational Risk

1.5 Credits This course focuses on issues involved in processing financial transactions—from order execution to final settlement of transactions—and operational risk in general. The course examines the procedures and market conventions for processing, verifying, and confirming completed transactions; resolving conflicts; decisions involved in developing clearing operations or purchasing clearing services; the role played by clearing houses; and numerous issues associated with cross-border transactions. The course also examines the effects of transaction processing, liquidity management, organizational structure, and personnel and compliance on the nature of operational risk. Qualitative and quantitative measures of operational risk are discussed.

Prerequisite(s): FRE 6151.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6251 Numerical and Simulation Techniques in Finance

1.5 Credits The course presents advanced numerical techniques to solve ordinary, partial and stochastic differential equations. These techniques are analyzed mathematically and use computer aided software that allows for the solution and the handling of such problems. In addition, the course introduces techniques for Monte Carlo simulation techniques and their use to deal with theoretically complex financial products in a tractable and practical manner. Both self-writing of software as well as using outstanding computer programs routinely employed in financial and insurance industries will be used.

Prerequisite(s): FRE 6083.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
FRE 6451 Behavioral Finance

1.5 Credits This course discusses investors’ systematic deviations from the level of financial rationality assumed by modern financial theory. Such biased behavior can lead to market inefficiencies, market opportunities and market failure. After a brief introduction to the topic and its research history, the course focuses on the limits to arbitrage created by decision bias, the equity premium puzzle, market over-reaction and under-reaction. The course seeks to understand how and where opportunities for and threats to wealth accumulation exist as a result of the mismatch between investor behavior and the assumptions about investment behavior inherent in financial theory.

Prerequisite(s): FRE 6023.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 6511 Derivatives Algorithms

1.5 Credits This course focuses on the algorithms behind derivatives valuation and applications. The focus is on the principles and practice of financial engineering and risk management and on developing intuition: understanding the reasons for the existence of the product, simulating possible paths and possible parameter values as an exploratory process, approximating complex derivatives as a combination of simpler ones, and attempting to replicate the payout. The goal is to prepare students to be able to evaluate an arbitrary derivative given only its term sheet. To that end, the course requires a project almost every week. Projects can be done in any programming language (Excel, Mathematica, R, Python, etc.), but the final result must be stand-alone tables and graphs. The primary prerequisite is familiarity with standard option pricing and Greeks. A portion of the final exam may involve a live computation project.

Prerequisite(s): FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7211 Forensic Financial Technology and Regulatory Systems

1.5 Credits The goal of this course is to understand the technology behind financial forensics and regulatory systems. These include innovative database techniques (“dataveillance”), artificial intelligence, data mining, and non-parametric outlier methods used by the Securities Exchange Commission (SEC), the Financial Industry Regulatory Authority (FINRA), as well as the FBI, and other federal and state agencies. Students will learn how to incorporate these technologies in the regulatory environment of the future. Student teams will prepare and present projects or case studies applying the concepts covered in class.

Prerequisite(s): FRE 6151.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FRE 7221 Databases and Financial Information Technology

1.5 Credits This is an advanced course on practical computer science topics most relevant to financial applications. As such it covers fundamental concepts such as database design, use, and maintenance, algorithmic complexity and efficiency considerations, memory optimization and grid performance, and, primarily, the use and importance of financial specification languages such as MDDL and FpML and financial communication standards such as FIX. Students will work on numerous projects, including attaining hands-on experience with a FIX engine.

Prerequisite(s): FRE 6151.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
**FRE 7241 Algorithmic Portfolio Management**

1.5 Credits This course focuses on portfolio construction and rebalancing strategies such as momentum, value, and size strategies, among others. The course emphasizes back-testing and risk factor analysis as well as optimization to reduce tracking error. It will also address how a quantitative investment approach can help both individual and institutional investors make sound long-term investment decisions.

Prerequisite(s): FRE 6123.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7251 Algorithmic Trading and High-Frequency Finance**

1.5 Credits Algorithmic trading refers to the utilization of special computer programs in an order management system that restructure an order into a sequence of sub-orders based on the dimensions of submission time, price, size, and side. The goal of this course is to survey several algorithmic strategies used by financial institutions and to understand their implementation in the context of order management systems and standard financial protocols (such as FIX and FIXatdl). Student teams will prepare and present projects or case studies applying the concepts covered in class.

Prerequisite(s): FRE 6151 and FRE 7221.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**FRE 7261 News Analytics and Strategies**

1.5 Credits The fast-growing field of news analytics requires large databases, fast computation, and robust statistics. This course introduces the tools and techniques of analyzing news, how to quantify textual items based on, for example, positive or negative sentiment, relevance to each stock, and the amount of novelty in the content. Applications to trading strategies are discussed, including both absolute and relative return strategies, and risk management strategies. Students will be exposed to leading software in this cutting-edge space.

Prerequisite(s): FRE 6151 and FRE 7221.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Department of Mathematics

Head: Erwin Lutwak

The Department of Mathematics is committed to excellence and innovation in the teaching and research of mathematics. Current active areas of research include geometric analysis, differential topology and partial differential equations. The bachelor’s, master’s and doctoral degree programs provide both a solid foundation in mathematics and extensive exposure to how mathematics is used in practice. Half of a mathematics major’s courses are taken in other departments. The department also offers a complete spectrum of undergraduate and graduate courses.

Mission Statement

The mission of the Department of Mathematics is to develop and implement innovative teaching strategies designed to help each student understand fundamental mathematical concepts and to use these concepts to excel in subsequent science and engineering courses.

Students taking departmental courses become confident in their abilities to reason rigorously, use the language of mathematics properly, write and speak about mathematical ideas precisely and concisely and appreciate the amazing power of mathematics to describe phenomena in the world. Students learn how to use mathematical software as a tool in the study and application of mathematics.

The Department

The department offers BS, MS and PhD degrees, with a strong interdisciplinary focus. The BS in Mathematics, for instance, has an optional concentration in physics. The MS in Mathematics focuses on strong abstract and quantitative reasoning abilities. The PhD in Mathematics encourages work applying advanced mathematics in other disciplines, with the major adviser from those disciplines.

To support its academic quality and to strengthen interdisciplinary work, the department’s research excels in the areas of convex geometry and the analysis of nonlinear partial differential equations arising from gauge field theory.

Degrees Offered

Bachelor of Science

- Mathematics, B.S.

Master of Science

- Mathematics, Examination Option and Designated Sub-specialty Option, M.S.
- Mathematics, Examination Option, M.S.
- Mathematics, Thesis Option, M.S.

Doctor of Philosophy

- Mathematics, Ph.D.

Faculty

Professors

Monika Ludwig, Professor of Mathematics
PhD, Technische Universität Wien
Convex geometry, valuations, geometric and analytic inequalities

Erwin Lutwak, Professor of Mathematics, Department Head
PhD, Polytechnic Institute of New York
Geometric analysis

Edward Y. Miller, Professor of Mathematics
PhD, Harvard University
Differential topology

Deane Yang, Professor of Mathematics
PhD, Harvard University
Geometric analysis

Yisong Yang, Professor of Mathematics
PhD, University of Massachusetts at Amherst
Partial differential equations, mathematical physics

Gaoyong Zhang, Professor of Mathematics
PhD, Temple University
Geometric analysis

Associate Professors

Kathryn Kuiken, Associate Professor of Mathematics
PhD, Polytechnic Institute of New York
Complex analysis, group theory

Joel C. W. Rogers, Associate Professor of Mathematics
PhD, Massachusetts Institute of Technology
Partial differential equations, fluid mechanics, numerical methods

Industry Faculty
David V. Chudnovsky, Distinguished Industry Professor of Mathematics
PhD, Institute of Mathematics, Ukrainian Academy of Science

Gregory V. Chudnovsky, Distinguished Industry Professor of Mathematics
PhD, Institute of Mathematics, Ukrainian Academy of Science
Number theory: analytic number theory, diophantine approximations and transcendence theory. Mathematical physics: nonlinear equations, quantum and classical fields. Computer science: computer algebra and complexity, large-scale numerical mathematics, parallel computing and digital signal processing

Assistant Professor

Franziska Berger, Assistant Professor
PhD, Munich University of Technology
Discrete mathematics

Teaching Faculty

Vanita Khosla, Instructor
MS, Polytechnic Institute of NYU
Calculus, precalculus

Harvansh Manocha, Industry Professor of Mathematics
PhD, Panjab University (India)
Lie groups and special functions

Luciano Medina, Instructor
MS, Polytechnic Institute of NYU
Partial differential equations and mathematical biology

Arman Mimar, Instructor
PhD, Columbia University
Number theory, arithmetic geometry

Jinghua Qian, Instructor
PhD, Tufts University
Probability and stochastic process, statistics

Tom Pranayanuntana, Instructor
PhD, Polytechnic University
Matrix inequalities, discrete convexity and convex geometry

Lindsey Van Wagenen, Senior Lecturer
PhD, Columbia University
Applied physics

Adjunct Faculty
Michel Lobenberg, Adjunct Professor  
PhD, Columbia University  
Banach spaces, probability and stochastic processes, mathematical physics

Sudhakar Mishra, Adjunct Professor  
PhD, City University of New York  
Algebraic topology, computational number theory, statistical and mathematical modeling, fuzzy set theory, diagnostic pattern recognition, proteomics

Jiazu Zhou, Research Professor  
PhD, Temple University  
Convex geometry, integral geometry

Adjunct Instructors

Irina Bronstein  
MS, Donetsk University

Amakoe Gbedemah  
MA, Queens College

Daniel Khachatorian  
BS, Polytechnic Institute of NYU

Rachel Jacobovits  
MS, Polytechnic University

Liana Lazarashvili  
MS, Georgian Academy of Science

Vaishali Prabhu  
PhD, Karnatak University

Abraham Sher  
ME, City College of New York  
MA, Brooklyn College

Hanna Ulman  
BA, Hebrew University  
Teaching Certificate, Tel Aviv University

Fang Zhao  
MS, Polytechnic University

Burton Lieberman
Mathematics

The Department of Mathematics administers the mathematics degree program. More information can be obtained from the department website, by calling (718) 260-3850 or by e-mailing chair@math.poly.edu.

Mathematics comprises abstraction, logic and quantitative reasoning. It is an indispensable tool for science and engineering. Today, mathematicians are employed by a wide range of companies, including Wall Street investment banks and government agencies, especially the National Security Agency. Polytechnic offers a complete spectrum of mathematics courses leading to bachelor’s, master’s and doctoral degrees. The degree programs provide not only a solid foundation in mathematics, but also extensive exposure to how mathematics is used in other fields of science and engineering. The department prides itself on providing each mathematics major, undergraduate or graduate, with extensive individual attention and a program tailored to individual needs.

Undergraduate Programs

The undergraduate program in mathematics provides a background for advanced study or subsequent research in mathematics and training for those students who expect to end their formal education with a bachelor’s degree.

For science and engineering majors, mathematics provides the theory and methods essential to understanding the mathematical aspects of their respective fields.

With these objectives, the Department of Mathematics offers courses in mathematics and, for the mathematics major, specific programs leading to the Bachelor of Science degree. Students wishing to pursue a bachelor’s degree in mathematics may elect to follow either of two courses of study. Students wishing to focus their studies within mathematics or to apply mathematics to other fields may elect the program leading to a BS in Mathematics. Students wishing to incorporate extensive physics into their mathematical training may elect the program leading to a BS in Mathematics and Physics. These two programs provide basic grounding in mathematical knowledge.

Dual majors in Mathematics and Physics

Polytechnic offers undergraduates a dual major in mathematics and physics, according to the general rules described in the section Degree Requirements. Specific course requirements for this 128-credit degree must be approved by advisers from both the mathematics and physics programs. The dual major allows students to gain competence in two different and substantial fields of science to such an extent that, upon earning a bachelor’s degree, they may qualify for industrial positions in two distinct areas or go on to graduate studies in either of the two subjects.

Graduate Programs
The Department of Mathematics offers graduate-level mathematics courses in analysis, geometry, topology, algebra, applied mathematics. These courses form a major portion of the work for advanced degrees in mathematics. They may also be taken by students in other departments to satisfy minor and elective requirements and by qualified pre-degree students who desire further study in graduate-level mathematics.

The department offers master’s and doctoral degrees in mathematics. Departmental requirements for these degrees are supplemented by general requirements for advanced degrees set forth elsewhere in this catalog.

Outstanding students are advised to apply for research fellowships, teaching fellowships or partial tuition remission.

Minor

Mathematics Minor

Students may obtain a minor in mathematics by taking 15 credits of mathematics courses, 8 credits of which are in addition to the major department’s requirement in mathematics and must include two courses in Real Analysis. At least 6 of these 8 credits must be taken by students while enrolled at Polytechnic.

Bachelors

Mathematics, B.S.

Requirements for the Bachelor of Science

Department Courses

MA 1002 The Art of Mathematics

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 1024 Calculus I

4 Credits  This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the
same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** Placement exam or MA 912 or MA 914. **Corequisite(s):** EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

### MA 1324 Integrated Calculus I

**4 Credits** This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** Placement exam or MA 912 or MA 914. **Corequisite(s):** EG 1 Examination Hour
Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### MA 1124 Calculus II

**4 Credits** This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** MA 1024 or MA 1324. **Corequisite(s):** EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

### MA 1424 Integrated Calculus II

**4 Credits** This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

**Prerequisite(s):** MA 1024 or MA 1324. **Corequisite(s):** EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### MA 2012 Elements of Linear Algebra I

**2 Credits** This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.
**Prerequisite(s): MA 1124 or equivalent.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2112 Multivariable Calculus A**

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

**Prerequisite(s): MA 2012.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2122 Multivariable Calculus B**

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

**Prerequisite(s): MA 2112.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

**Prerequisite(s): MA 2012.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2212 Data Analysis I**

**Prerequisite(s): MA 1124 or equivalent.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2222 Data Analysis II**

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

**Prerequisite(s): MA 2212.**
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3022 Probability Theory II

2 Credits This course covers multivariate random variables, moment generating functions, properties of expectation, limit theorems and gives an introduction to random processes and their applications.

Prerequisite(s): MA 2212 or MA 3012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3112 Complex Variables I

Prerequisite(s): MA 2122 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4413 Applied Partial Differential Equations

3 Credits This course looks at the heat equation, homogeneous and non-homogeneous boundary conditions, Green’s function, separation of variables, Fourier series and Fourier transform, Maximum principle, existence and uniqueness, Poisson integral formula, the wave equation. Shock waves, conservation laws.

Prerequisite(s): MA 2132 and MA 3112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4423 Introductory Numerical Analysis

3 Credits This course covers: Polynomial interpolation and approximation of functions. Divided differences. Least-squares data fitting, orthogonal polynomials. Numerical differentiation and integration. Solution of nonlinear equations. Gaussian elimination,

Prerequisite(s): MA 2132 and some experience in computer programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 4613 Analysis I**

*3 Credits* This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.

Prerequisite(s): MA 2122 and MA 2132.
Note: This course is required for MA minors.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 4623 Analysis II**

*3 Credits* This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.

Prerequisite(s): MA 4613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1114 Introduction to Programming and Problem Solving**

*4 Credits* This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour
Note: Weekly laboratory required.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life–
related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 1013 Mechanics**

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2023 Electricity, Magnetism and Fluids**

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2033 Waves, Optics and Thermodynamics**

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**PH 2021 Introductory Physics Laboratory I**

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.

Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**PH 2031 Introductory Physics Laboratory II**
0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1
  • Minor Specialties 18 Credits *
  • Humanities/Social Science electives 18 Credits
  • Free electives, with adviser’s approval 25 Credits

Total: 128 Credits

Note:

* Minor specialty: at least 9 credits beyond the required courses in a single area of study other than mathematics. The sequence must be well integrated and consistent, thereby enabling the student to gain knowledge in an area other than mathematics. Students should consult the faculty adviser of the department of interest when selecting electives. This requirement may be satisfied by either two minor specialties or one 18-credit specialty. This work must be in addition to courses taken under other categories of the programs (e.g., required courses in physics do not count toward a minor in physics).

The following are possible specialties:
Typical Course of Study for the Bachelor of Science in Mathematics

Freshman Year

Fall Semester: 14 Credits

**MA 1024 Calculus I**

*4 Credits* This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1002 The Art of Mathematics**

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1004 General Chemistry for Engineers**
4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

EG 1001 Engineering and Technology Forum

1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 14 Credits

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and
acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

**CS 1114 Introduction to Programming and Problem Solving**

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

**Sophomore Year**

**Fall Semester: 17.5 Credits**

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 2132 Ordinary Differential Equations**

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2222 Data Analysis II

2 Credits This course covers point and interval estimation. Hypothesis testing. Linear regression. One-way analysis of variance. Use of statistical software is integrated with the previous topics.

Prerequisite(s): MA 2212.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

- Minor Speciality 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17.5 Credits
MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2122 Multivariable Calculus B

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2312 Discrete Mathematics I

2 Credits This course covers logic and induction. Sets and functions. Recursive definitions. Counting techniques. Inclusion-exclusion principle.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2322 Discrete Mathematics II

2 Credits This course covers recurrence relations and generating functions. Equivalence relations and partial orderings. Graphs and connectivity of graphs. Trees and sorting. Boolean algebra, languages and finite state machines.

Prerequisite(s): MA 2312.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2031 Introductory Physics Laboratory II
0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

- Minor Specialty 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 16 Credits

MA 3022 Probability Theory II

2 Credits This course covers multivariate random variables, moment generating functions, properties of expectation, limit theorems and gives an introduction to random processes and their applications.

Prerequisite(s): MA 2212 or MA 3012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3112 Complex Variables I

Prerequisite(s): MA 2122 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3103 Problem Solving and Proofs

3 Credits This course covers mathematical problemsolving, proofs and innovative reasoning. Discussion of independent challenging problems from Analysis, Complex Analysis, Probability, Combinatorics, Linear Algebra, Number Theory and Graph Theory.

Prerequisite(s): MA 2312 and MA 2012.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Free Elective 3 Credits
- Minor Specialty 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 18 Credits
MA 3203 Linear Optimization

3 Credits This course examines linear optimization problems with constraints; optimality conditions and duality theory, the simplex method, complexity of the simplex method, interior point methods, selected applications, network flow problems and the network simplex method.

Prerequisite(s): MA 2312 and MA 2112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3303 Differential Geometry

3 Credits This course covers curves and surfaces. Curvature. First and second fundamental form. Gaussian curvature. Geodesics, Minimal Surfaces. Gauss-Bonnet Theorem.

Prerequisite(s): MA 2122.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Free Elective 3 Credits
- Minor Specialty 3 Credits
- Minor Specialty 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 15 Credits

MA 4413 Applied Partial Differential Equations

3 Credits This course looks at the heat equation, homogeneous and non-homogeneous boundary conditions, Green’s function, separation of variables, Fourier series and Fourier transform, Maximum principle, existence and uniqueness, Poisson integral formula, the wave equation. Shock waves, conservation laws.

Prerequisite(s): MA 2132 and MA 3112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4613 Analysis I

3 Credits This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.
Prerequisite(s): MA 2122 and MA 2132.

Note: This course is required for MA minors.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Free Elective 3 Credits
- Minor Specialty 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16 Credits

MA 4423 Introductory Numerical Analysis

Prerequisite(s): MA 2132 and some experience in computer programming.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 4623 Analysis II

3 Credits This course covers the study of basic topics in analysis with emphasis on methods. Sequences, series, functions, uniform convergence, continuity, partial differentiation, extreme value problems with constraints, Riemann integrals, line integrals, improper integrals, integrals with parameters, transformations, Riemann-Stieltjes integral, uniform and absolute convergence of integrals. Beta and Gamma functions.

Prerequisite(s): MA 4613.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 3914 Project in Mathematics I

4 Credits In this course, students read, study and investigate selected topics in mathematics. Problems are discussed and presented by participating students.

Prerequisite(s): approval of departmental adviser.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Free Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for the degree: 128 Credits

Footnotes
Students placed by examination or by an adviser into MA 902, MA 912 or MA 914 must defer registration for MA 1024.

The Free Elective can be a course offered by any department, provided it does not duplicate material studied in other courses. Students must meet the prerequisites for the courses.

May be substituted by another course with adviser's approval.

Masters

Mathematics, Examination Option and Designated Sub-specialty Option, M.S.

Requirements for the Master of Science

Bachelor’s degrees in mathematics are required for admission to this program. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, students are expected to have completed a one-year course in advanced calculus.

Thirty credits are required. Six credits may be devoted to a thesis.

Required (core) courses, 12 credits, 3 credits each:

**MA 7033 Linear Algebra I**

*3 Credits* This course covers: Basic ideas of linear algebra: Fields, vector spaces, basis, dependence, independence, dimension. Relation to solving systems of linear equations and matrices. Homomorphisms, duality, inner products, adjoints and similarity.

*Prerequisite(s): MA 2012 and MA 2122 or equivalent.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 7043 Linear Algebra II**

*3 Credits* This course continues MA 7033. Topics covered: Basic concepts of linear algebra continuing with: Range, nullity, determinants and eigenvalues of matrices and linear homomorphisms, the polar decomposition and spectral properties of linear maps, orthogonality, adjointness and its applications.

*Prerequisite(s): MA 7033.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 6213 Elements of Real Analysis I**

*3 Credits* This course and its sequel MA 6223 rigorously treat the basic concepts and results in real analysis. Course topics include limits of sequences, topological concepts of sets for real numbers, properties of continuous functions and differentiable functions. Important concepts and theorems include supremum and infimum, Bolzano-Weierstrass theorem, Cauchy sequences,
open sets, closed sets, compact sets, topological characterization of continuity, intermediate value theorem, uniform continuity, mean value theorems and inverse function theorem.

Prerequisite(s): MA 2122 or permission of advisor.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6223 Elements of Real Analysis II

3 Credits This course continues MA 6213. The topics are integration, series of real numbers, sequences and series of functions and Fourier series. Important concepts and theorems include Riemann and Riemann-Stieltjes integral, fundamental theorem of calculus, the mean value theorem of integrals, Dirichlet test, absolute and conditional convergence, uniform convergence, Weierstrass test, power series, orthogonal functions and Fourier series.

Prerequisite(s): MA 6213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

All Options:

Minimum of 15 credits (total) in mathematics courses.

There are three options for incoming MS students of Mathematics:

By Examination Option + Designated Sub-specialty Option:

Elective: 18 credits. At least 9 credits in courses approved for specialization by Department.

Note:

Includes a comprehensive oral examination before the degree is awarded. Examinations cover the student’s program of study and are scheduled towards the end of the semester in which the work is completed.

Total: 30 Credits

Mathematics, Examination Option, M.S.

Requirements for the Master of Science

Bachelor’s degrees in mathematics are required for admission to this program. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, students are expected to have completed a one-year course in advanced calculus.

Thirty credits are required. Six credits may be devoted to a thesis.

Required (core) courses, 12 credits, 3 credits each:
MA 7033 Linear Algebra I

3 Credits This course covers: Basic ideas of linear algebra: Fields, vector spaces, basis, dependence, independence, dimension. Relation to solving systems of linear equations and matrices. Homomorphisms, duality, inner products, adjoints and similarity.

Prerequisite(s): MA 2012 and MA 2122 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 7043 Linear Algebra II

3 Credits This course continues MA 7033. Topics covered: Basic concepts of linear algebra continuing with: Range, nullity, determinants and eigenvalues of matrices and linear homomorphisms, the polar decomposition and spectral properties of linear maps, orthogonality, adjointness and its applications.

Prerequisite(s): MA 7033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6213 Elements of Real Analysis I

3 Credits This course and its sequel MA 6223 rigorously treat the basic concepts and results in real analysis. Course topics include limits of sequences, topological concepts of sets for real numbers, properties of continuous functions and differentiable functions. Important concepts and theorems include supremum and infimum, Bolzano-Weierstrass theorem, Cauchy sequences, open sets, closed sets, compact sets, topological characterization of continuity, intermediate value theorem, uniform continuity, mean value theorems and inverse function theorem.

Prerequisite(s): MA 2122 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6223 Elements of Real Analysis II

3 Credits This course continues MA 6213. The topics are integration, series of real numbers, sequences and series of functions and Fourier series. Important concepts and theorems include Riemann and Riemann-Stieltjes integral, fundamental theorem of calculus, the mean value theorem of integrals, Dirichlet test, absolute and conditional convergence, uniform convergence, Weierstrass test, power series, orthogonal functions and Fourier series.

Prerequisite(s): MA 6213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

All Options:

Minimum of 15 credits (total) in mathematics courses.

There are three options for incoming MS students of Mathematics:

By Examination Option:
Electives: 18 credits, possibly with up to 9 from approved sub-specialties in other departments.

Note:

Includes a comprehensive oral examination before the degree is awarded. Examinations cover the student’s program of study and are scheduled towards the end of the semester in which the work is completed.

Total: 30 Credits

Mathematics, Thesis Option, M.S.

Requirements for the Master of Science

Bachelor’s degrees in mathematics are required for admission to this program. Students with degrees in other fields may be admitted, possibly with undergraduate deficiencies, at the discretion of departmental advisers. Before beginning graduate studies, students are expected to have completed a one-year course in advanced calculus.

Thirty credits are required. Six credits may be devoted to a thesis.

Required (core) courses, 12 credits, 3 credits each:

MA 7033 Linear Algebra I

3 Credits This course covers: Basic ideas of linear algebra: Fields, vector spaces, basis, dependence, independence, dimension. Relation to solving systems of linear equations and matrices. Homomorphisms, duality, inner products, adjoints and similarity.

Prerequisite(s): MA 2012 and MA 2122 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 7043 Linear Algebra II

3 Credits This course continues MA 7033. Topics covered: Basic concepts of linear algebra continuing with: Range, nullity, determinants and eigenvalues of matrices and linear homomorphisms, the polar decomposition and spectral properties of linear maps, orthogonality, adjointness and its applications.

Prerequisite(s): MA 7033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6213 Elements of Real Analysis I

3 Credits This course and its sequel MA 6223 rigorously treat the basic concepts and results in real analysis. Course topics include limits of sequences, topological concepts of sets for real numbers, properties of continuous functions and differentiable functions. Important concepts and theorems include supremum and infimum, Bolzano-Weierstrass theorem, Cauchy sequences,
open sets, closed sets, compact sets, topological characterization of continuity, intermediate value theorem, uniform continuity, mean value theorems and inverse function theorem.

Prerequisite(s): MA 2122 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 6223 Elements of Real Analysis II

3 Credits This course continues MA 6213. The topics are integration, series of real numbers, sequences and series of functions and Fourier series. Important concepts and theorems include Riemann and Riemann-Stieltjes integral, fundamental theorem of calculus, the mean value theorem of integrals, Dirichlet test, absolute and conditional convergence, uniform convergence, Weierstrass test, power series, orthogonal functions and Fourier series.

Prerequisite(s): MA 6213.

All Options:

Minimum of 15 credits (total) in mathematics courses.

There are three options for incoming MS students of Mathematics:

Thesis Option:

Electives: 12 credits
Master’s Thesis: 6 credits

Note:

Requires an examination of the thesis material by faculty advisers and certification that the work is satisfactory.

Total: 30 Credits

Doctorate

Mathematics, Ph.D.

Requirements for the Doctor of Philosophy

Requirements for the doctoral degree are primarily qualitative rather than quantitative. All students’ programs require the approval of the guidance committee.
The number of graduate credits usually associated with the PhD in mathematics is 60 credits (course = 3 credits). The courses are to be selected from a well-balanced program in one major and two minor fields. The minor fields are encouraged to be chosen outside the Department of Mathematics, selected from such fields as applied mechanics, financial engineering, control theory, computer science, traffic engineering and electrical engineering. 39 credits of course work and at least 21 credits of thesis are required.

Required (core) courses, 12 credits, 3 credits each:

**MA 7033 Linear Algebra I**

3 Credits This course covers: Basic ideas of linear algebra: Fields, vector spaces, basis, dependence, independence, dimension. Relation to solving systems of linear equations and matrices. Homomorphisms, duality, inner products, adjoints and similarity.

Prerequisite(s): MA 2012 and MA 2122 or equivalent.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 7043 Linear Algebra II**

3 Credits This course continues MA 7033. Topics covered: Basic concepts of linear algebra continuing with: Range, nullity, determinants and eigenvalues of matrices and linear homomorphisms, the polar decomposition and spectral properties of linear maps, orthogonality, adjointness and its applications.

Prerequisite(s): MA 7033.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 6213 Elements of Real Analysis I**

3 Credits This course and its sequel MA 6223 rigorously treat the basic concepts and results in real analysis. Course topics include limits of sequences, topological concepts of sets for real numbers, properties of continuous functions and differentiable functions. Important concepts and theorems include supremum and infimum, Bolzano-Weierstrass theorem, Cauchy sequences, open sets, closed sets, compact sets, topological characterization of continuity, intermediate value theorem, uniform continuity, mean value theorems and inverse function theorem.

Prerequisite(s): MA 2122 or permission of adviser.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 6223 Elements of Real Analysis II**

3 Credits This course continues MA 6213. The topics are integration, series of real numbers, sequences and series of functions and Fourier series. Important concepts and theorems include Riemann and Riemann-Stieltjes integral, fundamental theorem of calculus, the mean value theorem of integrals, Dirichlet test, absolute and conditional convergence, uniform convergence, Weierstrass test, power series, orthogonal functions and Fourier series.

Prerequisite(s): MA 6213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
Note:

A grade of A is necessary in these required courses for PhD credit (they may be repeated).

Only courses with grades of B or better can be used to satisfy the PhD requirements.

Students are required to pass a Part 0 written examination covering fundamental topics; a Part 1 written examination covering real and complex analysis and linear and abstract algebra and a Part 2 oral examination on topics chosen by the student and thesis adviser.

After passing the Part 2 examination, the student writes a dissertation under the supervision of a faculty adviser.

The final requirement for the PhD degree is a public oral exam on the student’s dissertation.

Students must demonstrate the ability to read mathematical text written in French, German, or Russian.

Department of Mechanical and Aerospace Engineering

Head: George Vradis

Mission Statement

The mission of the Department of Mechanical and Aerospace Engineering is to prepare students for careers in mechanical and related engineering disciplines for professional development, life-long learning and contributions to society. Furthermore, the department adds value to the student’s market and career potential by emphasizing an understanding of the physical world through projects, tools and practice, and by providing the foundation tools for innovation, invention and entrepreneurship.

The Department

The Department of Mechanical and Aerospace Engineering is an ideal destination for U.S. and international students interested in joining a dynamic department that offers educational and research opportunities in traditional and emerging areas of mechanical engineering. The department not only stresses creativity and innovation, but also emphasizes fundamental understanding of the underlying sciences, design methodologies and economic and social impact of engineered products. Polytechnic graduates hold leadership positions worldwide in careers spanning academia, industry and governmental and non-governmental organizations in both the engineering and other professional fields.

The undergraduate mechanical engineering curriculum balances fundamental science and engineering principles and engineering practice. Courses emphasize engineering- science fundamentals and computer applications that employ modern engineering tools. The program heavily emphasizes laboratory experience, engineering design and student participation in research programs.

Graduate studies provide a broad understanding of the mechanical engineering field combined with a deep understanding of one of its sub-disciplines, while they promote interdisciplinary studies, student professional development and lifelong learning skills. Traditional and emerging mechanical engineering- related areas of study are available. Program flexibility allows students to satisfy intellectual interests and pursue professional goals. Coursework and research opportunities are available in areas that include dynamical and complex systems, controls, composite materials and nano-materials, biomimetics, lasers and optical sensors, fluid mechanics and energy systems and fire research. Stateof- the-art laboratory and computational facilities support the educational and research enterprise, while the low faculty-to-student ratio warrants the development of close student-faculty
ties the graduate program’s relatively small size allows students to form close relationships with faculty Adviser, greatly strengthening and enriching the students’ experience and intellectual growth.

Students are encouraged to join Polytechnic’s student chapters of the American Society of Mechanical Engineers (ASME), American Institute of Aeronautics and Astronautics (AIAA), National Society of Black Engineers (NSBE), Engineers Without Borders (EWB), Society of Women Engineers (SWE) and Society of Automotive Engineers (SAE), as well as honor societies, Pi Tau Sigma for mechanical engineers and Tau Beta Pi for engineers in general.

Polytechnic students benefit significantly from participation in cutting-edge research (funded by government, industry and not-for-profit organizations), access to state-of-the-art laboratories, collaboration with a faculty that cares greatly for students and devotes its energy to their growth, and living in one of the world’s greatest cities.

The Profession

Mechanical engineers design, build and maintain the products and processes that define industrial and post-industrial societies. In its early days, mechanical engineering emerged as the discipline dedicated to producing power and building the first industrial machines. Mechanical engineering has evolved to the broadest of all engineering disciplines. Today, mechanical engineers are prime movers of innovation and invention in a wide range of dynamic and continually evolving industries. These industries include power production and aerospace, robotics and manufacturing, transportation and communication, electronics and mechatronics, and biotechnology and biomimetics. Mechanical engineers also have a long tradition of leadership in helping to develop and safeguard the natural environment by creating breakthroughs in such areas as resource conservation, improved efficiency of energy-consuming devices, development of codes for a safer technological environment, and new green energy sources. The breadth of their training allows some mechanical engineers to apply their training to the diversified fields of computer engineering, nanotechnology, software development, financial engineering, bioengineering, astronautics, systems engineering, corporate management, law and medicine. As Polytechnic graduates mature and realize their abilities, their professional lives may center on engineering research, government, business, education or entrepreneurship.

Degrees Offered

The department offers degree programs in mechanical engineering at the Bachelor of Science, Master of Science and Doctor of Philosophy levels. The undergraduate Bachelor of Science program is accredited by the Engineering Accreditation Commission (AEC) of the Accreditation Board of Engineering and Technology (ABET). The doctoral degree is approved by the New York State Doctoral Program Review.

The objectives of the undergraduate mechanical-engineering program are for its graduates to: 1) engage in, and advance in, professional careers in mechanical or related engineering, or other career paths that include industry, academia and governmental or nongovernmental organizations, and 2) seek continuous professional development and life-long learning through graduate-school studies, continuing-education credits and professional registration.

The department offers BS, MS and PhD degrees in mechanical engineering. Specific information about these programs may be found in the programs section of the catalog.
Bachelor of Science

- Mechanical Engineering, B.S.
- Mechanical Engineering, Aerospace Concentration, B.S.

Master of Science

- Mechanical Engineering with concentrations in mechanics and structural systems, controls and dynamic systems and fluid dynamics and thermal systems

Doctor of Philosophy

- Mechanical Engineering, Ph.D. with concentrations in aerospace engineering, materials engineering, mechanics and structural systems, controls and dynamic systems and fluid dynamics and thermal systems

Faculty

Professors

**Vikram Kapila**, Professor of Mechanical Engineering  
PhD, Georgia Institute of Technology  
*Linear/nonlineair control, distributed spacecraft formation flying and attitude control, mechatronics*

**Sunil Kumar**, Professor of Mechanical Engineering  
PhD, University of California at Berkeley  
*Thermal fluid sciences, applied mathematics*

**Said Nourbakhsh**, Professor of Materials Science  
PhD, Leeds University (England)  
*Phase transformation, electron microscopy, composite and smart materials, ferroelectric thin films*

**Michael J. Shelley**, Professor of Mechanical Engineering and Lilian and George Lyttle Professor of Applied Mathematics at Courant Institute of Mathematical Sciences at New York University  
PhD, University of Arizona  
*Fluid dynamics, computational physics, numerical analysis*

Associate Professors

**Salvatore Grimaldi**, Associate Professor of Mechanical Engineering and Associate Professor of Applied Hydrology at Universita degli Studi della Tuscia  
PhD, Universita di Roma “La Sapienza”  
*Applied and statistical hydrology, GIS terrain analysis, tracer methods for hydrological applications*

**Nikhil Gupta**, Associate Professor of Mechanical Engineering  
PhD, Louisiana State University  
*Micro- and nano-composite materials/mechanics*

**Iraj M. Kalkhoran**, Associate Provost of Undergraduate Academics and Associate Professor of Aerospace Engineering  
PhD, University of Texas at Arlington  
*Gas dynamics, high-speed flows, wind tunnel testing, shock tubes*

**Maurizio Porfiri**, Associate Professor of Mechanical Engineering  
PhD, Virginia Polytechnic Institute and State University  
*Dynamics, vibrations, computational mechanics, robotics*
Richard S. Thorsen, Associate Professor, Vice President Emeritus and Senior Advisor to the President
PhD, New York University
Heat transfer, energy systems, solar and nuclear energy

George Vradis, Associate Professor of Mechanical Engineering and Department Head
PhD, Polytechnic University
Computational fluid dynamics and heat transfer, energy systems

Assistant Professors

Reni Dingreville, Assistant Professor of Mechanical Engineering
PhD, Georgia Institute of Technology
Theoretical and computational mechanics, multi-scale modeling, advanced materials

Joo Kim, Assistant Professor of Mechanical Engineering
PhD, The University of Iowa
Multibody dynamics, optimization theory, robotic manipulation, bioengineering

Sean Peterson, Assistant Professor of Mechanical Engineering and Assistant Professor of Mechanical & Mechatronics
Engineering at University of Waterloo, Canada
PhD, Purdue University
Fluid mechanics, bio-fluid mechanics, energy harvesting

Industry and Research Professors

Joseph Borowiec, Industry Associate Professor
PhD, Polytechnic Institute of New York
Finite elements method, structural mechanics, design

Annalisa Scacchioli, Visiting Assistant Professor of Mechanical Engineering
PhD, University of L’Aquila (Italy)
Automatic control, automotive systems

Peter S. Walker, Research Professor of Mechanical Engineering and Research Professor of Orthopedic Surgery at New York University Hospital for Joint Diseases
PhD, University of Leeds
Orthopedics, minimally invasive surgery

Adjunct Faculty

Nicholas Dizinno
MS, Polytechnic University
Computer-aided design

Mehdi Naraghi
PhD, Polytechnic Institute of New York
Thermal and fluid systems

Sang-Hoon Lee
PhD, Polytechnic University
Measurement systems and automatic control
Nguyen Q. Nguyen
PhD, Polytechnic Institute of NYU
Mechanics of materials, sensors

Kee M. Park
PhD, Stevens Institute of Technology
Machine design

Iskender Sahin
PhD, Virginia Polytechnic Institute and State University
Thermal and fluid systems

Paul Sutton
JD, Brooklyn Law School
Intellectual property, intersections of law, engineering and business

Ali Vedavarz
PhD, Polytechnic University
Energy systems, green energy, HVAC

Faculty Emeriti

Philip Abrami, Professor Emeritus
MS, Polytechnic Institute of Brooklyn

Vito D. Agosta, Professor Emeritus
PhD, Columbia University

Anthony E. Armenakas, PE, Professor Emeritus
PhD, Columbia University

William B. Blesser, Professor Emeritus
MEE, Polytechnic Institute of Brooklyn

Irving B. Cadoff, Professor Emeritus
DEngSc, New York University

Louis S. Castleman, Professor Emeritus
ScD, Massachusetts Institute of Technology

John R. Curreri, Professor Emeritus
MEE, Polytechnic Institute of Brooklyn

Carmine D’Antonio, Professor Emeritus
MMeE, Polytechnic Institute of Brooklyn

Jerome M. Klosner, PE, Professor Emeritus
PhD, Polytechnic Institute of Brooklyn

Harold Margolin, Professor Emeritus
DEngSc, Yale University

William R. McShane, PE, Professor Emeritus
PhD, Polytechnic Institute of New York
Mechanical and Aerospace Engineering

Program Director: George Vradis

The Mechanical Engineering Program offers degrees of Bachelor of Science, Master of Science and Doctor of Philosophy in Mechanical Engineering. A Minor in Aerospace Engineering is offered as well as an Interdisciplinary Minor in Nuclear Sciences and Engineering (offered in collaboration with the Department of Applied Physics). Both minors can be integrated seamlessly into the BS in Mechanical Engineering program. The BS in Mechanical Engineering can be completed full-time or part-time. Students who choose the Co-Op Program work with their undergraduate advisers to design a study program. There is no evening program, so part-time students take the same classes as full-time students. Transfer students, all of whom must meet minimum residence requirements set by the Institute, are welcomed. A number of articulation agreements with several colleges provide a smooth transfer to the Institute. The Office of Undergraduate Admissions, which provides comprehensive support to prospective transfer students, should be consulted for details.

The Mechanical Engineering Program also offers two graduate degrees, Master of Science and Doctor of Philosophy in Mechanical Engineering. For each level, the student must choose one of the following specialty areas:

- Aerospace engineering (PhD only)
- Controls and dynamic systems
- Fluid dynamics and thermal systems
- Materials engineering (PhD only)
- Mechanics and structural systems

All mechanical engineering degrees are offered to full- and part-time students at the Brooklyn campus.

Mechanical Engineering Profession

Mechanical engineering is a dynamic, evolving profession and the most diverse of the engineering disciplines. Mechanical engineers invent, innovate and create the physical systems and devices that define modern society. These systems and devices include automobiles and aircrafts, robots and power plants, medical devices and artificial limbs, and advanced nanomaterials and smart structures. The breadth and depth of mechanical engineering contribute significantly to the development of three technologies that are expected to define the 21st century: bioengineering, nanotechnology and green energy. Undergraduate and graduate mechanical-engineering programs prepare Polytechnic graduates for practice in diverse technical industries as well as in corporate management, law, medicine and entrepreneurial endeavors.

Aerospace Engineering Profession
Aerospace engineering is the art and science associated with the design and performance of aircraft, spacecraft and other airborne and space-related devices and systems. The scientific aspects of aircraft and spacecraft design are rooted in mechanical engineering and, in particular, in the broad areas of low- and high-speed flows, strength and stability of extremely lightweight structures, aero-thermochemistry and propulsion, guidance and control, materials engineering, and thermodynamics and heat transfer.

Moon and planetary vehicles, deep-space probes and space habitats, once confined to the realm of science fiction, are now realities. Vehicles now under design or projected for the future challenge the imagination. They also challenge the current knowledge base and state of the art of the technologies involved.

To meet these extraordinary challenges, aerospace engineers must understand the scientific principles that give them the greatest possible potential, flexibility and adaptability. Conflicting requirements imposed by such considerations as safety, reliability, cost, maintenance, and production and handling often demand compromises to attain optimum design. Aerospace engineers are responsible to resolve such issues. The hallmark of aerospace engineers is an ability to push the boundaries of knowledge and lead teams of specialists to achieve mission-specific goals. The Minor in Aerospace Engineering prepares students to meet these challenges and follow successful careers in aerospace related industries.

Nuclear Engineering Profession

The Nuclear Engineering field is experiencing a major resurgence from the skeptical public attitude of the 1970s and 1980s that resulted in a stagnated nuclear power industry for more than two decades. At the same time nuclear technologies have emerged in many fields to provide advanced solutions to challenging problems, such as food processing, Instrumentation, diagnostics and perhaps most importantly in the medical industry where many nuclear-based diagnostic and therapeutic procedures have saved and improved the lives of millions. In addition, growing concerns regarding global warming have again shifted the attitude of the public to a more favorable view of the potential benefits of nuclear power, which is inherently carbon free and thus can play a substantial role in curbing carbon dioxide and methane emissions.

To meet the demands of this resurgent industry, engineers proficient in the fundamentals of the nuclear sciences and engineering are needed. Developing new nuclear based medical diagnostic technologies, new electric power reactor systems, inherently safe reactors, nuclear-based sensors, and instruments for non destructive testing of structures and materials are some of the many fields where engineers with knowledge of the fundamentals of this fascinating field can get engaged. The Interdisciplinary Minor in Nuclear Sciences and Engineering prepares graduates for rewarding and successful careers in these nuclear sciences and engineering related fields.

Undergraduate Program

Goals and Objectives

The objectives of the undergraduate BS in Mechanical Engineering program at the Polytechnic Institute of New York University is for its graduates to:

- engage and advance in professional careers in mechanical or related engineering, or other career paths that include industry, academia and governmental or non-governmental organizations; and
- seek continuous professional development and lifelong learning through graduate studies, continuing education credits and professional registration.

The Program

To support program goals, the undergraduate mechanical engineering curriculum balances basic scientific and engineering principles and practice. Emphasis in the basic sciences (mathematics, physics, chemistry and materials) as well as basic
engineering sciences (mechanics of materials, thermodynamics, fluid mechanics and heat transfer, measurement systems and controls) is balanced by a parallel emphasis in engineering practice: laboratory experience, engineering design and computer-based analysis and design.

During the program’s first two years a series of courses in mathematics, from calculus to multivariable calculus and differential equations, provides students with the background to understand and to solve complex equations of engineering physics. A series of courses in physics introduces the fundamentals of the physical world in all areas, including modern physics. Finally, a series of courses in chemistry, materials science and computer science introduce these fields, which are at the core of modern engineering research and practice, to the students.

A series of courses in the basic engineering sciences build on the knowledge acquired in mathematics, physics and materials sciences to provide the fundamental knowledge at the core of modern mechanical engineering. Engineering mechanics (statics and dynamics), mechanics of materials, thermodynamics, fluid mechanics, heat transfer, measurement systems and control systems form the basis of modern mechanical engineering. They also provide the needed foundation for students to excel in any major subdiscipline in mechanical engineering. Another series of courses that includes computer-aided design, finite elements method and machine design, introduces students to the tools of modern mechanical-engineering practice. Computer-based tools have emerged over the last 20 years to revolutionize the practice of mechanical engineering, offering unsurpassed capabilities in analyzing and simulating complex engineering systems, as well as increasing dramatically engineering-enterprise productivity. In dedicated classes, students learn to use the latest, state-of-the-art computer tools.

This required course work is complemented by a series of seven mechanical-engineering laboratory courses in materials science, statics, mechanics of materials, measurement systems, automatic controls, fluid mechanics and heat transfer. Finally, the students are given the opportunity to select from a broad range of elective courses to complement their education by building breadth and depth in one or more mechanical engineering sub-disciplines. Popular offerings over the last few years have been courses in energy systems, heating, ventilation and air-conditioning systems, nanomaterials and composites, mechatronics, microelectromechanical systems and in intellectual-property strategies for engineers.

Throughout the curriculum, a series of courses introduces the concepts, methods and tools of engineering design. Emphasis is on the systematic process of design and the related innovation and creative content. Three aspects of design addressed through the course content are:

- the concept of design and the corresponding concept of multiple solutions;
- the process of design; and
- the tools and skills for design.

The first aspect of design includes both the creative element, since the problem most likely lacks a unique solution, and project work. The second includes introduction to the systematic process of design, represented by concurrent engineering, quality management and the product-realization process, as well as other emerging concepts that set the framework for modern design. The third includes design tools, such as Computer Aided Design (CAD), Computational Fluid Dynamics (CFD) and Finite Element Analysis (FEA), as well as the underlying engineering theory for designing and analyzing components and systems.

The curriculum of integrated design exposure and experience evolves over the four years of the program. In their first year, students take EG 1001 Engineering and Technology Forum, EG 1003 Introduction to Engineering and Design, and ME 1012 Introduction to Mechanical Engineering, to gain an initial comprehensive exposure to how things are designed and built. These courses also introduce students to ethical issues in engineering research and practice. Students work in team projects and learn the basics of effective, professional report writing and presentations. Sophomore students take ME 2112 Computer Aided Design, where they are introduced to state-of-the-art computer-aided drafting tools, ME 2213 Statics, and ME 2211 Statics Laboratory, to enhance their understanding of static equilibrium of rigid bodies, and MT 2813 Introduction to Materials Science, and MT 2811 Materials Science Laboratory, to study the structure of engineering materials and examine the impact of material properties on design.

In the junior year, students take ME 3513 Measurement Systems, to learn how to design experiments; ME 3323 Energy Systems, to understand the design of thermodynamic systems; ME 3313 Fluid Mechanics, to understand design of fluid and thermal systems; ME 3233 Machine Design, to consider the design aspects of machines and mechanical systems; ME 3223 Dynamics, to consider the design of systems where motion is involved; and ME 3413 Automatic Control, to explore the control of mechanical, aerospace, robotic, thermofluid, and vibrating systems and processes.
Finally, the design experience culminates with the Capstone ME 4112 Senior Design I and ME 4113 Senior Design II courses, during which students work in teams of three to four to conceptualize, design, fabricate and test an engineering product or system. In addition to the systematic and creative processes of design, the capstone design experience includes engineering consideration of safety, ethics, economic analysis, project planning, and budgeting and quality. These courses focus heavily on communications aspects, including report writing and oral presentations. Finally, many mechanical engineering elective courses offered contain significant design experience.

**Placement**

Graduates of the Mechanical Engineering Bachelor of Science program are employed in a wide range of industries, including primarily:

- National defense
- Aerospace
- Energy generation and distribution
- Telecommunications
- Consulting firms (mostly infrastructure related)
- Petrochemical, Pharmaceutical and other process industries
- Government
- A variety of small and medium size engineering firms

At the same time, Polytechnic graduates find opportunities in emerging fields, such as in biomedical systems and devices, nanotechnology and mechatronics. Alumni have used their basic mechanical engineering education as a springboard to law, medicine, corporate management and entrepreneurial ventures.

Finally, a substantial number of graduates continue their studies toward a Master of Science (MS) or Doctor of Philosophy (PhD) degree in mechanical or related disciplines. Some of those obtaining a PhD degree pursue rewarding careers in academia and research organizations.

**Special Departmental Requirements**

Students must meet the Institute requirement of a 2.0 GPA or better for graduation. Seniors with GPAs of 3.5 or better may take certain graduate courses as electives with approval from the departmental adviser. Students on academic probation usually are permitted to preregister for the next semester, but are obliged to consult with their adviser after grades are posted and before classes begin. ME majors will follow the GPA schedule for disqualification below:

<table>
<thead>
<tr>
<th>Number of Full-Time Semesters Completed</th>
<th>Minimum Required Cumulative GPA</th>
<th>Minimum Number of Credits Earned</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1.50</td>
<td>8</td>
</tr>
<tr>
<td>2</td>
<td>1.70</td>
<td>16</td>
</tr>
<tr>
<td>3</td>
<td>1.85</td>
<td>28</td>
</tr>
<tr>
<td>4</td>
<td>2.0</td>
<td>40</td>
</tr>
<tr>
<td>5</td>
<td>2.0</td>
<td>56</td>
</tr>
<tr>
<td>6</td>
<td>2.0</td>
<td>68</td>
</tr>
<tr>
<td>7</td>
<td>2.0</td>
<td>84</td>
</tr>
</tbody>
</table>
Any student who does not meet the requirements above after the first semester will be automatically placed on final probation. Any student who does not meet the requirements above after the second semester will be automatically disqualified.

Transfer Students

All transfer students must meet the Institute’s minimum residency requirement of 64 credits. In addition, transfer students in the Mechanical Engineering Program are required to take all junior and senior mechanical engineering courses and technical electives at Polytechnic. Qualified graduates of two-year pre-engineering programs, such as those offered at several community colleges and four-year liberal-arts colleges, often may fulfill the requirements for BS in Mechanical Engineering in two additional years. Since such programs vary from college to college, students should meet with the mechanical engineering undergraduate adviser for guidance. The Institute has formal articulation agreements with some colleges; as a result, students from these schools have a series of transfer courses preapproved. Students with some course work toward a degree also may apply for transfer credit upon application to Polytechnic. In all cases, transfer credit is granted based upon equivalence to Polytechnic courses.

The process is expedited by previous decisions. Past transfer credit granted to students from the same college is a good indicator for prospective students. However, the adviser must be consulted in all cases for a current decision. Course content changes over the years at Polytechnic and other colleges, and content comparison determines decisions in each case. Transfer students are strongly encouraged to meet with the undergraduate adviser apart from the registration process to achieve a proper evaluation. The Office of Undergraduate Admissions offers information on past decisions for a given college and can arrange a meeting with the departmental undergraduate adviser. Graduates of technology programs may be able to fulfill the requirements for a BS in Mechanical Engineering in two to three-and-one-half years depending upon the scope and level of their previous education. The same is true for graduates of practical engineering and other such programs in various countries. Consult with the undergraduate adviser for details.

Typical Program of Study for the Bachelor of Science Degree

The program consists of five components:

- Engineering core, 50 credits
- Mechanical engineering electives, 9 credits
- Mathematics, sciences and introduction to engineering, 39 credits
- Humanities and social sciences, 24 credits
- Non-technical and technical electives, 6 credits

Graduate Program

Programs of study that lead to the MS and PhD degrees in Mechanical Engineering are available in each of five specialty areas:

- Aerospace engineering (PhD only)
- Controls and dynamic systems (MS and PhD)
- Fluid dynamics and thermal systems (MS and PhD)
- Materials engineering (PhD only)
- Mechanics and structural systems (MS and PhD)
A bachelor’s degree and a good academic record in mechanical engineering from a reputable college or university are generally required for admission to the graduate program. Students with exceptional undergraduate performance (typically with a GPA of 3.5 or better) can be admitted directly to the PhD program. Applicants with degrees from fields other than mechanical engineering may be admitted, but may have to complete additional studies to achieve a comparable background. Courses required to achieve this status are specified as part of the admission evaluation. Undergraduate courses specified for this purpose cannot count toward credits for the graduate degree. Graduate programs are subject to prior approval of a graduate adviser designated by the department.

To graduate, all students are required to have a 3.0 GPA or better in each of the following: in the average of all graduate courses taken at Polytechnic (whether or not some of these courses are being used to satisfy specific degree requirements); in the average of all courses submitted for the graduate degree sought (MS or PhD); in each guided studies, readings, projects, thesis and dissertation courses or credits enrolled.

**Goals and Objectives**

The objectives of the MS in Mechanical Engineering are for its students to acquire the skills necessary to:

- develop in-depth expertise in at least one subdiscipline of mechanical engineering (e.g., Fluid Dynamics and Thermal Systems; Mechanics and Structural Systems; and Controls and Dynamic Systems) to prepare for a rewarding professional career or for studies toward a PhD or other degrees;
- diversify their knowledge by taking advanced courses in other disciplines; and
- enhance their professional careers by acquiring knowledge of how to formulate, analyze and design components and systems by using modern advanced analytical and computational-engineering tools.

The objectives of the PhD in Mechanical Engineering are for its students to master the skills necessary to:

- obtain deep knowledge in one of the areas of mechanical engineering (e.g., materials, aerospace, fluid dynamics and thermal systems, mechanics and structural systems and controls and dynamic systems) through advanced courses and research;
- obtain a broad understanding of other engineering and science disciplines so they can participate in interdisciplinary research;
- identify problems, formulate research programs to address them, conduct research and produce results that advance the fundamental understanding of a certain subdiscipline by completing a dissertation in the chosen subdiscipline; and
- communicate results of their research and other work effectively through conference presentations and refereed journal publication.

**Minor**

**Aerospace Engineering Minor**

The Department of Mechanical and Aerospace Engineering offers a minor in Aerospace Engineering that consists of the following five courses, totaling 15 credits, which provide students with the foundation needed to pursue a career in the aerospace industry or graduate studies in the field:

**Required Courses:**
**ME 3213 Mechanics of Materials**

*3 Credits* The course examines the Concept of Stresses and Strains in two and three dimensions, Stress-strain relationships, Stress transformation, Strain transformation, Axial members, Torsion of shafts, Bending of beams.

*Prerequisite(s):* ME 2213, MT 2813 and MA 2132. *Corequisite(s):* ME 3211.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**AE 4603 Compressible Flow**

*3 Credits* This course covers conservation equations for inviscid flows, one-dimensional flows, normal shock waves, one-dimensional flow with friction, one-dimensional flow with heat addition, oblique shock waves and Prandtl- Meyer expansion waves.

*Prerequisite(s):* ME 3313 and ME 3313.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**AE 4613 Aerodynamics**

*3 Credits* The course explores incompressible inviscid flow, rotational and irrotational flow, elementary flows and their superposition, airfoil and wing geometry, aerodynamic forces and moments, thin airfoil theory, camber effects, incompressible laminar and turbulent boundary layer, vortex system, incompressible flow about wings, wing/body configurations, compressible flows past airfoils and wings and high-lift devices.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**AE 4633 Aerospace Propulsion**

*3 Credits* This course looks at operation, performance and design methods for flight-vehicle propulsion, air-breathing engines, ramjets, turbojets, turbofans and their components, elements of solid and liquid rocket-propulsion systems.

*Prerequisite(s):* AE 4603.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**AE 4653 Aircraft Flight Mechanics**

*3 Credits* The course examines development of equations of motion. Topics: Characteristics of aircraft-propulsion systems; Level flight performance of turbojet and propeller-driven aircraft; Unaccelerated climbing flight and aircraft ceiling; Takeoff and landing performance; Longitudinal and lateral static stability; Linearized equations of motion; Longitudinal and lateral modes of motion.

*Prerequisite(s):* ME 3223.

*Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0*

**Note:**
Students pursuing the BS in Mechanical engineering degree may complete the aerospace engineering minor by taking the four AE designated course in place of the ME and Technical Electives available in the program.

**Nuclear Sciences and Engineering Interdisciplinary Minor**

The Department of Mechanical and Aerospace Engineering, in collaboration with the Department of Applied Physics, offers a minor an Interdisciplinary Minor in Nuclear Sciences and Engineering that consists of the following five courses, totaling 15 credits, that provide students with the foundation needed to pursue a career in the nuclear sciences and engineering industries or graduate studies in the field:

**Required Courses:**

**PH 3103 Fundamentals of Applied Nuclear Physics**

*3 Credits* This course surveys the fundamentals of nuclear physics with application to nuclear engineering. Topics include an introduction to quantum mechanics, nuclear forces and nuclear structure, nuclear stability and reactions, natural and induced radioactivity.

*Prerequisite(s):* CM 1004, PH 2033 and MA 2132.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 4383 Introduction to Radiation Physics and Dosimetry**

*3 Credits* Theory and practice of Radiation and Health Physics. Atomic and nuclear structure, X-ray and gamma radiation, interaction of ionizing radiation with matter, and effects of ionizing radiation on living tissue. The course also introduces the principles of radiation detection, radiation measurement, and external and internal dosimetry.

*Prerequisite(s):* PH 3103.

Also listed under: PH 3503.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 4373 Introduction to Nuclear Engineering**

*3 Credits* This is intended to be a required course for the Nuclear Engineering Concentration. It covers three basic areas: (a) reactor kinetics, as it pertains to neutron reaction associated with fissile materials, (b) power reactor systems, i.e. the various types of nuclear reactors in use and their basic operating principles, and (c) design principles for reactors and reactor systems.

*Prerequisite(s):* PH 3103.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Two elective courses to be chosen from the following list of four:**

**EE 2613 Fundamentals of Electric Power Engineering for Non EE Students**

Prerequisite(s): MA 1024, MA 1124, and PH 1013. Corequisite(s): PH 2023.
Note: ABET competencies a, d, h i, j.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

FIN 3593 Probabilistic Risk Assessment

This undergraduate course in probabilistic risk assessment (PRA) introduces students to a deep, comprehensive methodology for risk evaluation associated with complex engineered technological designs. Four fundamental questions are addressed: what can go wrong, what are the indications of potential failure, what is the potential magnitude of the failure, and with what probability will failure occur. We will also explore human reliability analysis and common-cause-failure analysis. This course can be applied towards the requirements for NYU-Poly’s minor in Nuclear Science and Engineering but not towards the minor in Finance.

Prerequisite(s): MA 2054 or MA 2212 or MA 3012.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 4863 Corrosion and Non-Destructive Evaluation of Materials

Mechanisms of corrosion and means to prevent corrosion; uniform corrosion, galvanic corrosion, pitting, leaching and corrosion in fresh water; protective coatings, cathodic protection and changes in design and environment to prevent corrosion. Non-destructive testing of materials; Penetrants, Magnetic, Radiography, Eddy Current and Ultrasonic techniques. Materials selection, failure analysis and prevention and design strategies for inspectability.

Prerequisite(s): PH 2023 Electricity, Magnetism and Fluids

PS 2723 Human Factors in Engineering Design

The purpose of this course is to familiarize students with basic concepts, research findings and theories related to the way in which human characteristics, capabilities and limitations, including physiology and psychology, affect system design and performance. Students will develop a basic understanding of methods for studying and assessing human behavior and for analyzing human performance. It will introduce aspects of system, interface, organizational design and physical setting as they influence operators and performance.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Note:
Students pursuing the BS in Mechanical Engineering degree may complete the Interdisciplinary Minor in Nuclear Sciences and Engineering by taking the five courses in place of the ME, Technical, and Non-Technical electives available in the program.

**Bachelors**

**Mechanical Engineering, Aerospace Concentration, B.S.**

Typical Course of Study for the Bachelor of Science in Mechanical Engineering with Concentration in Aerospace Engineering

**Freshman Year**

**Fall Semester: 15 Credits**

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

*3 Credits* This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**MA 1024 Calculus I**
4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CM 1004 General Chemistry for Engineers

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

EW 1013 Writing the Essay

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

Spring Semester: 15 Credits

MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1424 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)
Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

**ME 1012 Introduction to Mechanical Engineering**

2 Credits This course introduces students to the range of mechanical engineering and emphasizes the basic principles and devices for storing and using energy, directing motion and satisfying needs. Case studies look at design issues and related ethical and professional practice issues. Emphasis is on a mindset of exploration. Engineering standards and standard parts. Teams work on and present two design challenges.

Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CS 1133 Engineering Problem Solving and Programming**

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

**EW 1023 The Advanced College Essay**

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Sophomore Year

Fall Semester: 16.5 Credits

**MA 2012 Elements of Linear Algebra I**

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.
MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

MT 2811 Materials Science Laboratory

1 Credits Students learn to characterize the microstructure and crystal structure of a material by optical and scanning electron microscopy and X-ray diffraction. The mechanical characterization is accomplished by hardness, tensile and yield strength, impact and fatigue testing.

Prerequisite(s): PH 1013 and CM 1004. Corequisite(s): MT 2813.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

MT 2813 Introduction to Materials Science

3 Credits Students in this course become familiar with atomic structure and bonding, atomic arrangement in crystals, crystal imperfections, mechanical behavior and failure of materials and binary phase diagrams.
Prerequisite(s): PH 1013 and CM 1004. Corequisite(s): MT 2811.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 2112 Computer Aided Design

2 Credits The course covers sketching, drawing and computer-aided drafting. Topics: Projection theory—multiview, axonometric, oblique. Auxiliaries, sections, isometrics, dimensions, fasteners, detail and assembly drawings. Introduction to blueprint reading. Overview of CIM and CAD integration with other CIM concepts. A design project incorporates developed skills in visualization, drawing techniques, standards and CAD.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

- Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16.5 Credits

MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2122 Multivariable Calculus B

2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 2211 Statics Laboratory

1 Credits The course deals with measurement and calculations of bending stress, bending moment, shear forces and deflections in beams, buckling of struts and equilibrium analysis of structures.
Corequisite(s): ME 2213.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

**ME 2213 Statics**

*3 Credits* The course covers three-dimensional vector treatment of the static equilibrium of particles and rigid bodies. Topics: Equivalent force and couple systems. Distributed force systems. Static analysis of trusses, frames and machines. Friction, impending motion. Methods of virtual work.

Prerequisite(s): PH 1013 and MA 1024. Corequisite(s): ME 2211.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**PH 2031 Introductory Physics Laboratory II**

*0.5 Credits* This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

**PH 2033 Waves, Optics and Thermodynamics**

*3 Credits* This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 17 Credits

**ME 3333 Thermodynamics**

*3 Credits* The course centers on properties of pure substances; concepts of work and heat; closed and open systems. Topics: Fundamental laws of thermodynamics. Carnot and Clasius statements of the 2nd law; entropy and entropy production; heat engines, refrigerators, heat pumps; efficiencies, coefficients of performance.
Prerequisite(s): PH 2033, MA 1124 and MA 2132.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 3211 Mechanics of Materials Laboratory**

1 Credit The course covers measurement of elastic constants for isotropic and anisotropic materials, verification of stress and strain transformation equations, stress concentration concept, unsymmetric bending of beams and torsion of shafts.

Corequisite(s): ME 3213.

Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

**ME 3213 Mechanics of Materials**

3 Credits The course examines the Concept of Stresses and Strains in two and three dimensions, Stress-strain relationships, Stress transformation, Strain transformation, Axial members, Torsion of shafts, Bending of beams.

Prerequisite(s): ME 2213, MT 2813 and MA 2132. Corequisite(s): ME 3211.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 3511 Measurement Systems Laboratory**

1 Credit The course covers electric measurements, data acquisition, passive and active filters for signal conditioning, temperature, position, velocity and acceleration measurements.

Corequisite(s): ME 3513.

Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

**ME 3513 Measurement Systems**

3 Credits The course focuses on electrical circuits and components, filtering, dynamic measurement system response characteristics, analog signal processing, digital representation, data acquisition, sensors. Study of measurement systems via computer simulation.

Prerequisite(s): MA 2132 and PH 2023. Corequisite(s): ME 3511.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 3223 Dynamics**

3 Credits The course explores three-dimensional treatment of the kinematics of particles and rigid bodies using various coordinate systems, Newton’s laws, work, energy, impulse, momentum, conservative force fields, impact and rotation and plane motion of rigid bodies.

Prerequisite(s): MA 2132 and ME 2213.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Humanities and Social Sciences Elective 3 Credits
Spring Semester: 17 Credits

ME 3233 Machine Design

3 Credits This course introduces students to fundamentals of machine elements, enabling them to employ this knowledge to design machines for various practical applications. The course begins with a brief review of stress, deformation and failure, followed by friction and wear. Subsequently, loaded columns, pressurized cylinders and shafts are presented. Bearings, gears, screws, springs, brakes, clutches and belts are discussed. The course ends with an introduction to MEMS, Micro-Electro Mechanical Systems.

Prerequisite(s): ME 3213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3311 Fluid Mechanics Laboratory

1 Credits The course covers fluid mechanics instrumentation and principles, and consists of a set of laboratory experiments designed to reinforce concepts presented in ME 3313 Fluid Mechanics. In addition, this course involves team work, report writing and oral presentations.

Corequisite(s): ME 3313.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 3313 Fluid Mechanics

3 Credits This course introduces fluid kinematics, hydrostatics and thermodynamics. Topics: Basic conservation laws in integral form for a control volume. Conservation of mass, momentum, angular momentum and energy for flow. Inviscid flow: Bernoulli’s and Euler’s equations. Viscous flow: flows in pipes and ducts, head loss and friction factor.

Prerequisite(s): ME 3333, MA 2132 and MA 2122. Corequisite(s): ME 3311.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3411 Automatic Control Laboratory

1 Credits The course covers system ID, modeling, identification and control of RC electrical network and a DC servo motor, modeling and control of a maglev system, rotary inverted pendulum and a coupled water tank system.

Prerequisite(s): ME 3511. Corequisite(s): ME 3413.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 3413 Automatic Control

3 Credits The course examines dynamic system modeling, analysis and feedback control design with extensive, hands-on computer simulation. Topics: Modeling and analysis of dynamic systems. Description of interconnected systems via transfer functions and block/signal flow diagrams. System response characterization as transient and steady-state responses and error

Prerequisite(s): ME 3513 and ME 3223. Corequisite(s): ME 3411.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Humanities and Social Sciences Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Senior Year

Fall Semester: 16 Credits

ME 4112 Senior Design I

2 Credits This is the first of two courses dedicated to the capstone design experience in mechanical engineering. In this first course, the students identify and define a project to design, build and test an engineering product or system and complete the preliminary design of their chosen system. The product-realization process, building effective teams and teamwork and communication skills are emphasized.

Prerequisite(s): ME 2112, ME 3233 and ME 3313. Corequisite(s): ME 4214, ME 4313 and ME 3413.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 4214 Finite Element Modeling, Design and Analysis

4 Credits The analysis of complex static and dynamic problems involves three steps: selection of a mathematical model; analysis of the model; interpretation of the predicted response. The course deals with deriving analytical solutions and comparing them with Finite Element Analysis results. Students are required to use state-of-the-art commercial software.

Prerequisite(s): ME 3213, ME 3313, MA 2122 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

ME 4311 Heat Transfer Laboratory

1 Credits The course covers heat-transfer instrumentation and principles and consists of a set of laboratory experiments designed to reinforce the concepts presented in ME 4313 Heat Transfer. In addition, this course involves teamwork, report writing and oral presentation.

Prerequisite(s): ME 3311. Corequisite(s): ME 4313.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 4313 Heat Transfer

Prerequisite(s): ME 3313. Corequisite(s): ME 4311.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

AE 4603 Compressible Flow

3 Credits This course covers conservation equations for inviscid flows, one-dimensional flows, normal shock waves, one-dimensional flow with friction, one-dimensional flow with heat addition, oblique shock waves and Prandtl- Meyer expansion waves.

Prerequisite(s): ME 3333 and ME 3313.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

AE 4653 Aircraft Flight Mechanics

3 Credits The course examines development of equations of motion. Topics: Characteristics of aircraft-propulsion systems; Level flight performance of turbojet and propeller-driven aircraft; Unaccelerated climbing flight and aircraft ceiling; Takeoff and landing performance; Longitudinal and lateral static stability; Linearized equations of motion; Longitudinal and lateral modes of motion.

Prerequisite(s): ME 3223.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Spring Semester: 15 Credits

ME 4113 Senior Design II

3 Credits This is the second of two courses dedicated to the capstone design experience in mechanical engineering and based on knowledge and skills acquired in earlier course work. Topics: Product design, development, building and testing prototype hardware, with an emphasis on teamwork. The Product Realization Process emphasizes incorporation of engineering standards and realistic constraints. The course concentrates on communication skills.

Prerequisite(s): ME 4112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

AE 4613 Aerodynamics

3 Credits The course explores incompressible inviscid flow, rotational and irrotational flow, elementary flows and their superposition, airfoil and wing geometry, aerodynamic forces and moments, thin airfoil theory, camber effects, incompressible laminar and turbulent boundary layer, vortex system, incompressible flow about wings, wing/body configurations, compressible flows past airfoils and wings and high-lift devices.
Weeky Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**AE 4633 Aerospace Propulsion**

3 Credits This course looks at operation, performance and design methods for flight-vehicle propulsion, air-breathing engines, ramjets, turbojets, turbofans and their components, elements of solid and liquid rocket-propulsion systems.

Prerequisite(s): AE 4603.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Non-Technical Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

Total credits required for the degree: 128 Credits

Footnotes

1 Humanities and Social Sciences Electives are classes that must begin with one of the following prefixes: AH, AN, EC, EN, HI, MU, PL, PS, CAM, STS, SEG, URB. At least one of these courses must be Level 3 or Level 4 (3xxx or 4xxx). At least one of these courses must be writing intensive (xxxxW).

2 Non-Technical Electives are non-engineering, science based courses that need to have one of the following prefixes: AH, AN, EC, EN, HI, MU, PL, PS, CAM, SEG, STS, URB, MA, PH or BMS. The approval of the ME Undergraduate Adviser is required.

**Mechanical Engineering, B.S.**

Typical Course of Study for the Bachelor of Science in Mechanical Engineering

Freshman Year

Fall Semester: 15 Credits

**EG 1001 Engineering and Technology Forum**
1 Credits In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EG 1003 Introduction to Engineering and Design**

3 Credits This course introduces selected aspects of the history, philosophy, methodology, tools and contemporary topics in engineering. Also included are basic engineering experimentation and data analysis, a team-design project and analysis and presentation of engineering data and designs.

Weekly Lecture Hours: 5 | Weekly Lab Hours: 2.5 | Weekly Recitation Hours: 2

**MA 1024 Calculus I**

4 Credits This course covers: Library of functions, functions of one variable. Limits, derivatives of functions defined by graphs, tables and formulas, differentiation rules for power, polynomial, exponential and logarithmic functions, derivatives of trigonometric functions, the product and quotient rule, the chain rule, applications of the chain rule, maxima and minima, optimization. MA 1324 is for students who wish to take MA 1024 but need more review of precalculus. MA 1324 covers the same material as MA 1024 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): Placement exam or MA 912 or MA 914. Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**CM 1004 General Chemistry for Engineers**

4 Credits This is a one-semester introductory course in general chemistry. It covers chemical equations, stoichiometry, thermodynamics, gases, atomic and molecular structure, periodic table, chemical bonding, states of matter, chemical equilibrium, organic, inorganic and polymeric materials and electrochemistry.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 3 | Weekly Lab Hours: 2 | Weekly Recitation Hours: 1

**EW 1013 Writing the Essay**

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

Spring Semester: 15 Credits
MA 1124 Calculus II

4 Credits This course covers definite integrals, theorems about integrals, anti-derivatives, second fundamental theorem of calculus, techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series. MA 1424 is for students who wish to take MA 1124 but need more review of precalculus. MA 1124 covers the same material as MA 1124 but with more contact hours a week, incorporating a full discussion of the required precalculus topics.

Prerequisite(s): MA 1024 or MA 1324. Corequisite(s): EG 1 Examination Hour
Note: credit for this course may be used to satisfy the minimum credit requirement for graduation.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 1013 Mechanics

3 Credits This course is the first of a three-semester lecture sequence in general physics for science and engineering students. Motion of particles and systems of particles. One-dimensional motion. Vectors and two-dimensional motions. Forces and acceleration. Conservation of energy and momentum. Rotations. The free and driven harmonic oscillator. Gravitation. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): MA 1024 or an approved equivalent. Corequisite(s): MA 1124 or approved equivalent and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

ME 1012 Introduction to Mechanical Engineering

2 Credits This course introduces students to the range of mechanical engineering and emphasizes the basic principles and devices for storing and using energy, directing motion and satisfying needs. Case studies look at design issues and related ethical and professional practice issues. Emphasis is on a mindset of exploration. Engineering standards and standard parts. Teams work on and present two design challenges.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CS 1133 Engineering Problem Solving and Programming

3 Credits This introductory course in engineering problem solving and computer programming is for all undergraduate engineering students without prior programming experience in any language. The course covers the fundamentals of computer programming and its underlying principles using the MATLAB programming language. Concepts and methods are illustrated by examples from various engineering disciplines. Useful numerical techniques and their applications to real world problems in science and engineering are also discussed. Weekly laboratory required.

Corequisite(s): EG 1 Examination Hour
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3

EW 1023 The Advanced College Essay
3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

Sophomore Year

Fall Semester: 16.5 Credits

MA 2012 Elements of Linear Algebra I

2 Credits This course introduces vector concepts. Linear transformations. Matrices and Determinants. Characteristic roots and eigenfunctions.

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2132 Ordinary Differential Equations

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2023 Electricity, Magnetism and Fluids

3 Credits This is the second course of a three-semester lecture sequence in general physics for science and engineering students. Fluids at rest and in motion. An introduction to electric and magnetic forces and fields. Electric charge density. Electric fields from simple charge distributions. Electric potential. Capacitance. Magnetic forces. Magnetic field from a current loop. Inductance. Magnetism in matter. Current and resistance. (This class meets four hours per week for lectures and recitation.)

Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2021 and EG 1 Examination Hour.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1

PH 2021 Introductory Physics Laboratory I

0.5 Credits This course is the first of a two-semester sequence. Introduction to the science of measurement and data analysis. Accompanies PH 2023. Experiments cover topics from PH 1013 and PH 2023.
Prerequisite(s): PH 1013 and MA 1124 or an approved equivalent. Corequisite(s): PH 2023.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

MT 2811 Materials Science Laboratory

1 Credits Students learn to characterize the microstructure and crystal structure of a material by optical and scanning electron microscopy and X-ray diffraction. The mechanical characterization is accomplished by hardness, tensile and yield strength, impact and fatigue testing.

Prerequisite(s): PH 1013 and CM 1004. Corequisite(s): MT 2813.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

MT 2813 Introduction to Materials Science

3 Credits Students in this course become familiar with atomic structure and bonding, atomic arrangement in crystals, crystal imperfections, mechanical behavior and failure of materials and binary phase diagrams.

Prerequisite(s): PH 1013 and CM 1004. Corequisite(s): MT 2811.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 2112 Computer Aided Design

2 Credits The course covers sketching, drawing and computer-aided drafting. Topics: Projection theory—multiview, axonometric, oblique. Auxiliaries, sections, isometrics, dimensions, fasteners, detail and assembly drawings. Introduction to blueprint reading. Overview of CIM and CAD integration with other CIM concepts. A design project incorporates developed skills in visualization, drawing techniques, standards and CAD.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 3
  • Humanities and Social Sciences Elective 3 Credits

Spring Semester: 16.5 Credits

MA 2112 Multivariable Calculus A

2 Credits This course introduces Multivariable Calculus. Analysis of functions of several variables, vector valued functions, partial derivatives, optimization techniques.

Prerequisite(s): MA 2012.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2122 Multivariable Calculus B
2 Credits This course continues Multivariable Calculus. Multiple integrals, parametric equations, vector fields, line integrals, surface integrals and major theorems concerning their applications.

Prerequisite(s): MA 2112.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MA 2212 Data Analysis I

Prerequisite(s): MA 1124 or equivalent.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 2211 Statics Laboratory

1 Credits The course deals with measurement and calculations of bending stress, bending moment, shear forces and deflections in beams, buckling of struts and equilibrium analysis of structures.

Corequisite(s): ME 2213.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 2213 Statics

3 Credits The course covers three-dimensional vector treatment of the static equilibrium of particles and rigid bodies. Topics: Equivalent force and couple systems. Distributed force systems. Static analysis of trusses, frames and machines. Friction, impending motion. Methods of virtual work.

Prerequisite(s): PH 1013 and MA 1024. Corequisite(s): ME 2211.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PH 2031 Introductory Physics Laboratory II

0.5 Credits This is the second course of two-semester sequence. Continuation of the introduction to the science of measurement and data analysis. The course accompanies PH 2023. Experiments cover topics from PH 2023 and PH 2033.

Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2033.
Weekly Lecture Hours: 0 | Weekly Lab Hours: 1.5 | Weekly Recitation Hours: 0

PH 2033 Waves, Optics and Thermodynamics

3 Credits This is the third course of a three-semester lecture sequence in general physics for science and engineering students. Water, sound and electromagnetic waves. Reflection, scattering and absorption. Standing waves and spectra. Superposition, diffraction and beats. Geometrical optics. Introduction to thermodynamics; temperature, heat, and entropy. (This class meets four hours per week for lectures and recitation.)
Prerequisite(s): PH 2021 and PH 2023. Corequisite(s): PH 2031 and EG 1 Examination Hour.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1
- Humanities and Social Sciences Elective 3 Credits

Junior Year

Fall Semester: 17 Credits

ME 3333 Thermodynamics

3 Credits The course centers on properties of pure substances; concepts of work and heat; closed and open systems. Topics: Fundamental laws of thermodynamics. Carnot and Clasius statements of the 2nd law; entropy and entropy production; heat engines, refrigerators, heat pumps; efficiencies, coefficients of performance.

Prerequisite(s): PH 2033, MA 1124 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3211 Mechanics of Materials Laboratory

1 Credits The course covers measurement of elastic constants for isotropic and anisotropic materials, verification of stress and strain transformation equations, stress concentration concept, unsymmetric bending of beams and torsion of shafts.

Corequisite(s): ME 3213.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 3213 Mechanics of Materials

3 Credits The course examines the Concept of Stresses and Strains in two and three dimensions, Stress-strain relationships, Stress transformation, Strain transformation, Axial members, Torsion of shafts, Bending of beams.

Prerequisite(s): ME 2213, MT 2813 and MA 2132. Corequisite(s): ME 3211.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3511 Measurement Systems Laboratory

1 Credits The course covers electric measurements, data acquisition, passive and active filters for signal conditioning, temperature, position, velocity and acceleration measurements.

Corequisite(s): ME 3513.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5
ME 3513 Measurement Systems

3 Credits The course focuses on electrical circuits and components, filtering, dynamic measurement system response characteristics, analog signal processing, digital representation, data acquisition, sensors. Study of measurement systems via computer simulation.

Prerequisite(s): MA 2132 and PH 2023. Corequisite(s): ME 3511.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3223 Dynamics

3 Credits The course explores three-dimensional treatment of the kinematics of particles and rigid bodies using various coordinate systems, Newton’s laws, work, energy, impulse, momentum, conservative force fields, impact and rotation and plane motion of rigid bodies.

Prerequisite(s): MA 2132 and ME 2213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

• Humanities and Social Sciences Elective 3 Credits

Spring Semester: 17 Credits

ME 3233 Machine Design

3 Credits This course introduces students to fundamentals of machine elements, enabling them to employ this knowledge to design machines for various practical applications. The course begins with a brief review of stress, deformation and failure, followed by friction and wear. Subsequently, loaded columns, pressurized cylinders and shafts are presented. Bearings, gears, screws, springs, brakes, clutches and belts are discussed. The course ends with an introduction to MEMS, Micro-Electro Mechanical Systems.

Prerequisite(s): ME 3213.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 3311 Fluid Mechanics Laboratory

1 Credits The course covers fluid mechanics instrumentation and principles, and consists of a set of laboratory experiments designed to reinforce concepts presented in ME 3313 Fluid Mechanics. In addition, this course involves team work, report writing and oral presentations.

Corequisite(s): ME 3313.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 3313 Fluid Mechanics

Prerequisite(s): ME 3333, MA 2132 and MA 2122. Corequisite(s): ME 3311.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 3411 Automatic Control Laboratory**

1 Credits The course covers system ID, modeling, identification and control of RC electrical network and a DC servo motor, modeling and control of a maglev system, rotary inverted pendulum and a coupled water tank system.

Prerequisite(s): ME 3511. Corequisite(s): ME 3413.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

**ME 3413 Automatic Control**

Prerequisite(s): ME 3513 and ME 3223. Corequisite(s): ME 3411.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- ME Elective 3 Credits
- Humanities and Social Sciences Elective 3 Credits

**Senior Year**

**Fall Semester: 16 Credits**

**ME 4112 Senior Design I**

2 Credits This is the first of two courses dedicated to the capstone design experience in mechanical engineering. In this first course, the students identify and define a project to design, build and test an engineering product or system and complete the preliminary design of their chosen system. The product-realization process, building effective teams and teamwork and communication skills are emphasized.

Prerequisite(s): ME 2112, ME 3233 and ME 3313. Corequisite(s): ME 4214, ME 4313 and ME 3413.
Weekly Lecture Hours: 2 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
ME 4214 Finite Element Modeling, Design and Analysis

4 Credits The analysis of complex static and dynamic problems involves three steps: selection of a mathematical model; analysis of the model; interpretation of the predicted response. The course deals with deriving analytical solutions and comparing them with Finite Element Analysis results. Students are required to use state-of-the-art commercial software.

Prerequisite(s): ME 3213, ME 3313, MA 2122 and MA 2132.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

ME 4311 Heat Transfer Laboratory

1 Credits The course covers heat-transfer instrumentation and principles and consists of a set of laboratory experiments designed to reinforce the concepts presented in ME 4313 Heat Transfer. In addition, this course involves team work, report writing and oral presentation.

Prerequisite(s): ME 3311. Corequisite(s): ME 4313.
Weekly Lecture Hours: 0.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 1.5

ME 4313 Heat Transfer

Prerequisite(s): ME 3313. Corequisite(s): ME 4311.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  - ME Elective 3 Credits
  - Humanities and Social Sciences Elective 3 Credits

Spring Semester: 15 Credits

ME 4113 Senior Design II

3 Credits This is the second of two courses dedicated to the capstone design experience in mechanical engineering and based on knowledge and skills acquired in earlier course work. Topics: Product design, development, building and testing prototype hardware, with an emphasis on teamwork. The Product Realization Process emphasizes incorporation of engineering standards and realistic constraints. The course concentrates on communication skills.

Prerequisite(s): ME 4112.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
  - ME Elective 3 Credits
  - Technical Elective 3 Credits
  - Non-Technical Elective 3 Credits
  - Humanities and Social Sciences Elective 3 Credits
Total credits required for the degree: 128 Credits

Footnotes

1 Humanities and Social Sciences Electives are classes that must begin with one of the following prefixes: AH, AN, EC, EN, HI, MU, PL, PS, CAM, SEG, STS, or URB. At least one of these courses must be Level 3 or Level 4 (3xxx or 4xxx). At least one of these courses must be writing intensive (xxxxW).

2 ME Electives are courses with the following prefixes: AE, ME, MT.

3 Technical Electives are engineering or applied physics courses that are Level 2 or higher.

4 Non-Technical Electives are non-engineering, science based courses that need to have one of the following prefixes: AH, AN, EC, EN, HI, MU, PL, PS, CAM, SEG, STS, URB, MA, PH or BMS. The approval of the ME Undergraduate Adviser is required.

Masters

Mechanical Engineering, Controls and Dynamic Systems Specialty, M.S.

Requirements for the Master of Science

Course requirements for the MS in Mechanical Engineering are suited to the applicant’s specialty, which is specified by the student in the admissions process or during the first advising session. Students must take at least 21 credits out of the 30 credits needed for the degree at Polytechnic. No more than 6 credits in “Guided Reading” courses are allowed. Validation credit is not allowed, but the graduate adviser may waive specific requirements (and substitute designated ones), based upon the student’s prior studies or experience. Transfer credits are not granted for:

- undergraduate courses;
- courses counted toward satisfying undergraduate degree requirements;
- courses not related to the graduate program as stated in this catalog;
- courses that received a grade lower than B.

Studies for the MS must be completed in five years, unless a formal leave of absence is approved before the period for which studies are interrupted.

The degree requirements are:

ME 6003 Applied Mathematics in Mechanical Engineering

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6043 Transport Phenomena

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6213 Introduction to Solid Mechanics

3 Credits The course explores fundamentals of kinematics of solid bodies; displacement and strain measures, introduction to statics of solid bodies, stress tensor, equilibrium equations. Topics include analysis of columns, beams and beams on elastic foundations.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6603 Digital Control Systems

3 Credits The course introduces digital systems, signal conversion techniques, z-transform and inverse z-transform, transfer function and block diagrams, state-variable techniques, controllability, observability, stability and control design techniques.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

ME 6703 Linear Control Theory and Design I

3 Credits The course covers modeling of mechanical systems (e.g., mechatronic, vibrational, robotic and smart systems) in state-space. Topics: Description and analysis of linear mechanical systems, transform and transition matrix methods and properties such as stability, controllability/stabilizability, observability/detectability.

Prerequisite(s): Graduate standing or advisor approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- ME xxxx Required for Specialty Area (see below) 6 Credits
- ME xxxx Electives, approved by graduate adviser 6 Credits
- Free Electives 6 Credits

Total: 30 Credits
Note:

If students decide to do a ME 997x Master Thesis (9 credits) as part of their work for the degree, these 9 credits will be counted against 3 credits out of the 6 credits in ME electives, 3 credits out of the 6 credits in ME Required for the Specialty Area credits and 3 credits out of the 6 credits of Free Electives. Students are not allowed to submit more than three courses (9 credits) starting with a 5 for MS degree requirements satisfaction. Departmental electives include courses with a mechanical (ME), aerospace (AE) or materials (MT) prefix, plus departmental thesis or project credits. All courses and program details are subject to adviser approval.

Controls and Dynamic Systems Specialty

In the Controls and Dynamic Systems area, at least three graduate courses come from the list of courses under this heading. See courses below.

Mechanical Engineering, Fluid Dynamics and Thermal Systems, M.S.

Requirements for the Master of Science

Course requirements for the MS in Mechanical Engineering are suited to the applicant’s specialty, which is specified by the student in the admissions process or during the first advising session. Students must take at least 21 credits out of the 30 credits needed for the degree at Polytechnic. No more than 6 credits in “Guided Reading” courses are allowed. Validation credit is not allowed, but the graduate adviser may waive specific requirements (and substitute designated ones), based upon the student’s prior studies or experience. Transfer credits are not granted for:

- undergraduate courses;
- courses counted toward satisfying undergraduate degree requirements;
- courses not related to the graduate program as stated in this catalog;
- courses that received a grade lower than B.

Studies for the MS must be completed in five years, unless a formal leave of absence is approved before the period for which studies are interrupted.

The degree requirements are:

**ME 6003 Applied Mathematics in Mechanical Engineering**

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 6043 Transport Phenomena**

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6213 Introduction to Solid Mechanics

3 Credits The course explores fundamentals of kinematics of solid bodies; displacement and strain measures, introduction to statics of solid bodies, stress tensor, equilibrium equations. Topics include analysis of columns, beams and beams on elastic foundations.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6603 Digital Control Systems

3 Credits The course introduces digital systems, signal conversion techniques, z-transform and inverse z-transform, transfer function and block diagrams, state-variable techniques, controllability, observability, stability and control design techniques.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

ME 6703 Linear Control Theory and Design I

3 Credits The course covers modeling of mechanical systems (e.g., mechatronic, vibrational, robotic and smart systems) in state-space. Topics: Description and analysis of linear mechanical systems, transform and transition matrix methods and properties such as stability, controllability/ stabilizability, observability/ detectability.

Prerequisite(s): Graduate standing or advisor approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- ME xxxx Required for Specialty Area (see below) 6 Credits
- ME xxxx Electives, approved by graduate adviser 6 Credits
- Free Electives 6 Credits

Total: 30 Credits

Note:

If students decide to do a ME 997x Master Thesis (9 credits) as part of their work for the degree, these 9 credits will be counted against 3 credits out of the 6 credits in ME electives, 3 credits out of the 6 credits in ME Required for the Specialty Area credits and 3 credits out of the 6 credits of Free Electives. Students are not allowed to submit more than three courses (9 credits) starting with a 5 for MS degree requirements satisfaction. Departmental electives include courses with a mechanical (ME), aerospace
(AE) or materials (MT) prefix, plus departmental thesis or project credits. All courses and program details are subject to adviser approval.

Fluid Dynamics and Thermal Systems Specialty

In the Fluid Dynamics and Thermal Systems area, at least three graduate courses come from the list of courses under this heading. See courses below.

Mechanical Engineering, Mechanics and Structural Systems Specialty, M.S.

Requirements for the Master of Science

Course requirements for the MS in Mechanical Engineering are suited to the applicant’s specialty, which is specified by the student in the admissions process or during the first advising session. Students must take at least 21 credits out of the 30 credits needed for the degree at Polytechnic. No more than 6 credits in “Guided Reading” courses are allowed. Validation credit is not allowed, but the graduate adviser may waive specific requirements (and substitute designated ones), based upon the student’s prior studies or experience. Transfer credits are not granted for:

- undergraduate courses;
- courses counted toward satisfying undergraduate degree requirements;
- courses not related to the graduate program as stated in this catalog;
- courses that received a grade lower than B.

Studies for the MS must be completed in five years, unless a formal leave of absence is approved before the period for which studies are interrupted.

The degree requirements are:

**ME 6003 Applied Mathematics in Mechanical Engineering**

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 6043 Transport Phenomena**

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 6213 Introduction to Solid Mechanics**

*3 Credits* The course explores fundamentals of kinematics of solid bodies; displacement and strain measures, introduction to statics of solid bodies, stress tensor, equilibrium equations. Topics include analysis of columns, beams and beams on elastic foundations.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 6603 Digital Control Systems**

*3 Credits* The course introduces digital systems, signal conversion techniques, z-transform and inverse z-transform, transfer function and block diagrams, state-variable techniques, controllability, observability, stability and control design techniques.

Prerequisite(s): Adviser approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**ME 6703 Linear Control Theory and Design I**

*3 Credits* The course covers modeling of mechanical systems (e.g., mechatronic, vibrational, robotic and smart systems) in state-space. Topics: Description and analysis of linear mechanical systems, transform and transition matrix methods and properties such as stability, controllability/ stabilizability, observability/ detectability.

Prerequisite(s): Graduate standing or advisor approval.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- ME xxxx Required for Specialty Area (see below) 6 Credits
- ME xxxx Electives, approved by graduate adviser 6 Credits
- Free Electives 6 Credits

Total: 30 Credits

Note:

If students decide to do a ME 997x Master Thesis (9 credits) as part of their work for the degree, these 9 credits will be counted against 3 credits out of the 6 credits in ME electives, 3 credits out of the 6 credits in ME Required for the Specialty Area credits and 3 credits out of the 6 credits of Free Electives. Students are not allowed to submit more than three courses (9 credits) starting with a 5 for MS degree requirements satisfaction. Departmental electives include courses with a mechanical (ME), aerospace (AE) or materials (MT) prefix, plus departmental thesis or project credits. All courses and program details are subject to adviser approval.

**Mechanics and Structural Systems Specialty**
In the Mechanics and Structural Systems area, at least three graduate courses come from the list of courses under this heading. See courses below.

**Doctorate**

**Mechanical Engineering, Ph.D.**

**Requirements for the Doctor of Philosophy**

The PhD is a terminal degree beyond the MS and focuses on engineering research. Students are expected to advance the state of the art in their specialty by original and creative work. A MS in Mechanical or Aerospace Engineering or other closely related engineering or applied sciences fields is required for admission to the PhD degree program. A 3.5 GPA or better in the MS work is generally required for admission. In cases where it is unclear that the required MS specialization has been satisfied, the MS degree requirements of the preceding section will define the necessary reparation. The same criterion is used when the MS degree is in other engineering disciplines. Students with a BS degree in Mechanical or Aerospace Engineering and a GPA of 3.5 or better may apply directly for admission to the PhD program. Students have to take a written and oral departmental qualifying examination within the first two offerings of the exam after the date they join the doctoral program.

The general credit requirements for the PhD degree (beyond the BS degree and including MS degree credits) are:

<table>
<thead>
<tr>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transfer from MS degree</td>
</tr>
<tr>
<td>Approved course work</td>
</tr>
<tr>
<td>PhD Dissertation (ME 999X)</td>
</tr>
<tr>
<td>Minimum total required</td>
</tr>
</tbody>
</table>

Studies for the PhD degree must be completed in five years after the MS degree or the date of admission, whichever is later, unless a formal leave of absence is approved before the period for which the studies are interrupted.

Once the dissertation is begun (after the student passes the PhD Qualifying Exam and forms a PhD Guidance Committee), the student must register for at least 3 credits of ME 999X PhD Dissertation in Mechanical Engineering each fall and spring semester. Actual registration should reflect the pace of the work and the activity of the student. An exception to the minimum registration requirement may be made in the last semester of registration if that semester is devoted primarily to complete the work and dissertation. A dissertation grade of U for two consecutive terms affects whether a student will be permitted to continue doctoral work. Students are required to present the progress in their dissertation work to their guidance committees at least once a year.

Details on the PhD degree requirements and additional requirements can be found in the departmental pamphlet on the topic.

**General Credit Requirements**

The general credit requirements for the PhD degree (beyond the BS degree and including MS degree credits) are:
Transfer from MS degree: 30 Credits
Approved course work beyond the MS degree: 21 Credits (minimum)
PhD Dissertation (ME 999X): 24 Credits (minimum)
Minimum total required: 75 Credits (minimum)

Studies for the PhD degree must be completed in five years after the MS degree or the date of admission, whichever is later, unless a formal leave of absence is approved before the period for which the studies are interrupted.

Once the dissertation is begun (after the student passes the PhD Qualifying Exam and forms a PhD Guidance Committee), the student must register for at least 3 credits of ME 999X PhD Dissertation in Mechanical Engineering each fall and spring semester. Actual registration should reflect the pace of the work and the activity of the student. An exception to the minimum registration requirement may be made in the last semester of registration if that semester is devoted primarily to complete the work and dissertation. A dissertation grade of U for two consecutive terms affects whether a student will be permitted to continue doctoral work. Students are required to present the progress in their dissertation work to their guidance committees at least once a year.

Details on the PhD degree requirements and additional requirements can be found in the departmental pamphlet on the topic.

Department of Technology Management

Head: Bharat Rao

Mission Statement

The mission of the Department of Technology Management is to act as a major educational gateway and premier learning and research hub devoted explicitly to broadly defined innovation and technology management and entrepreneurship. The scholarly intellectual capital it produces and its tailored programs at the undergraduate, graduate and doctoral levels enable the department to provide unique and valuable opportunities for students, practicing managers and scholars. The department is committed unequivocally to upgrade and revise continually its learning programs and courses to meet fast-changing demands of a dynamic, innovation-driven and competitive environment and to be an academic leader in technology management.

The Department

Effective technology and innovation management and entrepreneurship increasingly determine success in business today. The Department of Technology Management is an acknowledged pioneer and leader in the New York City/tri-state region and beyond in offering courses and programs about these increasingly critical arenas. The department serves a diverse and broad range of professionals, and its faculty and students compose a vital and forward-thinking research and learning community. The department’s research and educational offerings focus on a broad range of sectors, including financial and professional services; retailing and logistics; bio-medical, biotechnology and pharmaceuticals; renewable energy and clean technology; media and entertainment; IT, telecom, networks and modern electronic business; and non-for-profits and government—all constituting areas of greatest growth and opportunity in the modern economy, especially in New York City, the nation’s foremost global city.

Degrees Offered

Bachelor of Science

- Business and Technology Management, B.S.

Master of Science

- Information Management (eIM) - Concentrations: Information Management (IM), Information Management (IMCIO) and Information Management (IMCISO)
- Management of Technology, M.S. (MOT)*
- Organizational Behavior (MSOB) - Concentrations: Human Resource Information Systems, Human Resources Management, Management of Change and Training and Development

Doctor of Philosophy

- Technology Management, Ph.D.

Graduate Certificates

- Construction Management Graduate Certificate**
- Electronic Business Management Graduate Certificate
- Entrepreneurship Graduate Certificate
- Human Resources Management Graduate Certificate
- Information Management Graduate Certificate
- Organizational Behavior Graduate Certificate
- Project Management Graduate Certificate
- Technology Management Graduate Certificate
- Telecommunications Management Graduate Certificate
Research Profile

The Department of Technology Management consists of an interdisciplinary group of scholars that studies various aspects of technology and innovation - strategic, behavioral, organizational and sociological. Some specific streams of research and sub-topics include:

- Global innovation and R&D strategy - Managing emerging technologies - Technology and development - Service design and innovation - Tech entrepreneurship and commercialization - Sustainable and clean-tech innovation
- Impacts of information technology upon individuals, organizations and society - Citizen science - Social computing - Open source - Business model innovation - Pervasive information services
- Sociological aspects of technology and work - Communicative practices - Distributed collaboration and virtual teams - Knowledge management - Leading Distributed and Virtual Organizations - Project Management

Educational Programs

Undergraduate Program

The Department of Technology Management offers a Bachelor of Science in Business and Technology Management (BTM). This program prepares students to be next-generation managers in fields dominated by technological innovation and especially the rapid advancement of information technology and other fields in the applied science and engineering disciplines. Students completing the BTM Program are prepared to succeed in positions such as technology project leaders, technology savvy entrepreneurs, technology and IT analysts, customer-relationship managers and in other cross-functional roles, and developers of business innovations in financial services and other professional services fields.

Minor in Management

Undergraduate students may obtain a Management Minor by completing 14 credits of undergraduate management courses. An overall GPA of at least 2.0 must be maintained. At least 8 of the 14 credits must be taken by students while enrolled at Polytechnic.

Graduate and Certificate Programs

The department offers a portfolio of redesigned and modernized educational programs, all dealing with the broad spectrum of innovation, technology management and entrepreneurship in the modern economy, and the department’s graduate programs attract a wide range of students and professionals. This is because all managers should understand how technology and innovation management and entrepreneurship are essential for delivering value to organizations and to the market.

The department offers several graduate and professional programs, two of which are earned in executive management format (meeting every other week on Thursday evening and all day Saturday) and four of which are offered on weekday evenings. One program is offered in both formats.

The department’s graduate and professional programs include:
Students may pursue the MOT, MSM and MS-OB programs either part time or full time with an evening schedule. Each has concentrations that allow students to specialize in selected areas.

The department also offers advanced graduate certificates from the MSM and MS-OB Programs, which consist of sequences of courses leading to advanced knowledge in a desired area of specialization.

**Graduate Programs**

We encourage and welcome prospective students to apply to our other thriving and innovative graduate programs: the Management of Technology (MOT) and Information Management (IM) Executive Master’s programs, the Master’s of Science—Management (MSM) and the Master’s of Science—Organization Behavior (MS-OB). Further information on these programs can be found on the department’s website.

**Doctor of Philosophy in Technology Management**

Modern technologies increasingly and profoundly affect the management of products, services, processes, organizational forms, business models, the shape of industry structures and modern business environments, the available kinds of technology-enabled innovation and the capability of integrating technology and management—all aimed at creating value for customers and organizations. The ability to conduct research on and to educate about the managerial implications of such topics—all composing technology management—is a highly sought-after and important arena for business scholarship and education. The PhD in Technology Management provides this increasingly significant set of scholarly and educational opportunities.

This degree program is for research-oriented students. Both full-time and part-time students are accepted. Admission criteria include academic record, professional experience, research potential, GMAT or GRE scores, references and a writing sample.

Please visit the program’s website for more information.

All management undergraduate and graduate degree programs, as well as certificate programs, are further described in this catalog.

**Student Professional Societies, Associations and Organizations**

The Management of Technology and the Information Management Executive Programs Alumni Association actively seek to continue and expand shared professional experience gained during and after the programs. Members meet face to face or electronically to share insights obtained in their work experiences and to debate issues broadly relevant to technology management.

The Organizational Behavior Program sponsors an award-winning student chapter of the Society for Human Resources Management (SHRM). The PolySHRM chapter was selected as one of the top 10 in the country by national SHRM. PolySHRM sponsors forums with experts and provides opportunities for professional networking and mentoring to enhance a student’s education and career.

The student club associated with the Bachelor of Science in Business and Technology Management degree program is a strong and valued component of the social fabric of undergraduate life at Polytechnic. This organization works to create professional knowledge and opportunities for members.

Departmental representatives are available for student advising at all NYU-Poly campuses — Brooklyn, Long Island and Westchester — and at the Manhattan location.

**Extension in Israel**
The Department of Technology Management offers the Master of Science in Management (MSM) as well as in Organizational Behavior (OB) at its extension in Israel. The Polytechnic Israel extension program was initiated in 1997 by Polytechnic Management Professor Harold Kaufman to fill a local demand for managerial expertise.

The programs are identical to the evening curricula in New York and offer selected concentrations specifically for professionals and managers working in Israeli business and industry. The program brings cutting-edge technology management approaches taught by Polytechnic professors together with Israeli faculty to address the advanced state of technology in Israel.

For further information about the extension in Israel, contact Academic Director Harold Kaufman at (718) 260-3485 in New York or by e-mail at hkaufman@poly.edu.

Faculty

Professors

Mel Horwitch, Professor of Technology Management; on leave
MBA, DBA, Harvard University
AB, Princeton
Innovation management, global innovation, technology strategy, technology policy

Harold G. Kaufman, Professor of Technology Management; Academic Director, Organizational Behavior Program;
Academic Director, Department of Management Extension in Israel MIE,
PhD, New York University
BME, Cooper Union for the Advancement of Science and Art
Managing professional and technical workers, career management, obsolescence of knowledge and skills, research methods

Associate Professor

Bharat P. Rao, Associate Professor of Technology Management and Department Chair
PhD, University of Georgia
Managing emerging technologies, broadband, wireless and digital business, global innovation, strategic marketing, IT in the supply chain, alliances, networks and collaborative enterprises

Assistant Professors

Anne-Laure Fayard, Assistant Professor of Technology Management and Academic Director,
PhD Program in Technology Management
PhD, Ecole Des Hautes Etudes en Sciences Sociales (France)
Discourse analysis, communication, online communities, social-material practices, space and culture

Oded Nov, Assistant Professor of Technology Management
PhD, University of Cambridge, UK,
MSC, London School of Economics, UK
Technology management, behavioral aspects of information systems, knowledge management, motivations of open source and user-generated content contributors

Industry Faculty
Jerry MacArthur Hultin, Industry Professor of Law, Management and Public Policy; President of Polytechnic Institute of NYU
JD, Yale University
Innovation management, global development, modern university education, technology policy

Joseph S. Nadan, Industry Professor of Technology Management; Director of eMOT and eIM Master’s Programs
PhD, New York University
Content innovation, social networks, global entrepreneurship, media management, wireless innovation, e-business

Technology, Culture and Society

Richard. C. Wener, Professor of Psychology
PhD, University of Illinois at Chicago
Environmental psychology, crowding, assessment of the built environment

Research and Faculty Faculty Emeriti

Seymour Kaplan, Associate Professor Emeritus of Operations Management and Management Science
PhD, New York University
Operations research and management

Adjunct Faculty

Frank Apicella
MBA, New York University
Finance

John Artise
MA, New York University
Global human resource management

Harun Asad
MBA, George Mason University
General management, marketing, innovation

Yair Berson
PhD, State University of New York Binghamton
Organizational behavior, leadership of high technology firms, strategic leadership

Tushar Bhattacharjee
PhD, Post-Doctoral Research, MIT and Osaka University
Data communications, electrical engineering

Parbati Bhattacharya
MS, Pace University
Finance

Rabindre Bhattacharya
MS, Mercy College
Economics, finance
Robert Biolsi  
PhD, Graduate Center, College University of New York  
*Finance, inflation, equity prices and commodity diversification, electricity deregulation*

Jabril Bensedrine  
PhD, ESSEC Graduate School of Business (France)  
*Entrepreneurship, corporate entrepreneurship, technology strategy*

Ravi Bhatia  
MS, Polytechnic Institute of New York  
*Project management*

Denise Bracamonte  
BA, St. John University; PMP and PMI  
Certified Project management  
*Project management*

Aurora Brito  
MBA, Suffolk University  
*Coaching in organizations, organizational behavior*

Howard Bruck  
MBA, Fordham University  
*Project management*

Srimat T. Chakradhar  
PhD, Rutgers University  
*Design/test distributed, networked computing systems, embedded systems*

Arnold Cohen  
MBA, City College of New York  
*Marketing*

Lance Cohen  
PhD, Columbia University  
*Management information systems*

Robert Cohen  
MBA, New York Institute of Technology  
*Management information systems, quality control and systems*

Vaughan Coleman  
MSOB, Polytechnic University  
MA, New York University  
*Knowledge Management in HR*

Vincent Conte  
PhD, Hofstra University  
*Globalization and technology in HR*

Alejandro Crawford  
MBA, Tuck School, Dartmouth  
*Entrepreneurial marketing and sales, managing growing enterprises, marketing*
Michael Cortegiano  
BS, Fairfield University  
Accounting and finance

Jan Damsgaard  
PhD, Copenhagen Business School (Denmark)  
e-Business, management information systems

Anthony Deak  
MS, Polytechnic Institute of New York  
Foundations of management, global perspectives in management

Matthew J. DeLuca  
MPA, University of Pittsburgh  
Labor relations, performance management, reward systems, organizational consulting, outsourcing, global HR management

Michael D’Emic  
PhD, National University of Ireland, Cork  
MBA, Trinity College (Dublin)  
Accounting, finance

Philip Dorin  
Management Department Adviser for Long Island Campus  
PhD, University of Connecticut  
Organizational behavior, human resource management, training and development

Roger D. Eisenhardt  
MA, Long Island University, CW Post  
MSOB, Polytechnic Institute of NYU  
Human resource management

Noha S. El-Ghobashy  
MS, Columbia University  
Project management

James Fazio  
MA and MBA, St. John’s University  
Operations management

Philip Ferrara  
PhD, Hofstra University  
Organizational staffing, job design, employee engagement

William Feuss  
PhD, Stevens Institute of Technology  
Marketing

Steve Goldberg  
MBA, New York University  
Digital marketing, accounting, finance, human resources

Sara Grant  
PhD, New York University  
Organizational theory and design, human resource management, conflict management, organizational behavior, research methods
Edward Greenbaum
MS, Cornell University
Industrial and labor relations

Bohdan Hoshovsky
PhD, Pacifica Graduate Institute
Organizational behavior, project management, general management, transhumanism

Jonatan Jelen
MBA, Ecole Superieure de Commerce de Paris
PhD candidate, Baruch
Economics, supply chain management

Seymour Kaplan
PhD, New York University
Economics, management science

David Kalow
JD, University of Chicago
Intellectual property

Armand Keim
MBA, City College of NY, Baruch
CAPSTONE projects

Zuño Kristal
EdD, Columbia University
Leadership, organizational learning, executive coaching

Howard Kupferman,
MS, Polytechnic Institute of New York
MBA, Finance, Fordham University
Organizational behavior, business ethics, human resource management, marketing

Tate Lacy
MBA, UC Berkeley
Marketing, biochemistry

David Lefferts
MBA, Columbia University
Emerging financial technologies, financial products, e-Business

Gary Levanti
MBA, Binghamton University
New product development

Gary Levanti
MBA, Binghamton University
Entrepreneurship

Rob Marano
MS, University of Pennsylvania
Entrepreneurship, engineering
Thomas Mazzone  
MBA, Theseus Institute (France) 
*Operations management, supply chain management, project management*

Louis Minakakis  
MSM, Polytechnic University  
*Marketing*

Mark Mishken  
PhD, University of Tennessee  
*Organizational staffing, organizational behavior*

Pavlos Mourdoukoutas  
PhD, University of Connecticut  
*Economics*

Bala Mulloth  
PhD, Polytechnic Institute of NYU  
*Entrepreneurship, e-Business, technology management*

Carl Nelson  
MIE, New York University  
*Operations management*

Bruce Niswander  
JD, MBA, Ohio State University  
*Entrepreneurship, entrepreneurial finance, managing intellectual property and intellectual capital*

James Paguagua  
MBA, Pace University  
*New product development, marketing*

Mark Popola  
BS, Brooklyn College  
*Information technology, systems, management in organizations*

Ravi Rajagopal  
MS, Queens College  
*Cloud computing*

John Reilly  
MA, Columbia University  
*Human resource information systems, web-based human resource management, managing new technology in HR*

Teresa Piliouras  
PhD, Polytechnic University  
*Operations management, risk management, management of information technology*

Timothy W. Reinig  
JD, State University of New York at Buffalo  
*e-Business, e-Commerce marketing, Internet law and intellectual property*

Gary Rinkerman  
JD, Georgetown University Law Center  
*Intellectual property*
Suman Sabastin  
MSOB, Polytechnic University  
Statistics

Fred Schlissel  
MBA, Columbia University  
Entrepreneurship

Ron Spinelli  
MS, Brooklyn Polytechnic University  
Supply chain management, strategic business

Wendy Stahl  
MBA, Harvard University  
Marketing new product development

Thomas Stiles  
MBA, New York University  
Telecommunications management

John Thomas  
MBA, University of Rochester  
Operations, quality and project management

Vivek Veeraiah  
MS, MBA, Polytechnic Institute of NYU  
Operations management, enterprise data systems

Carla Visser, Adjunct Associate Professor of Management  
M.Ed, Rutgers University  
Coaching in organizations

Jack Yurkiewicz  
PhD, Yale University  
Management science

Anthony Zinsser  
PhD, Stevens Institute of Technology  
Organizational behavior, organization development, talent management, leadership and team development

Advisory Boards

Corporate and Academic

The Department of Technology Management maintains deep ties with a wide range of firms in a host of knowledge- and innovation-intensive sectors. The department is honored to have a distinguished and active Corporate Advisory Board. The department also works closely with high-quality academic institutions and colleagues worldwide and is honored to have an active and highly respected Academic Advisory Board. Both boards meet regularly to review the department’s programs, research and plans. In this manner, the department stays informed, meets the pragmatic and scholarly needs and critical challenges confronting technology and innovation executives and entrepreneurs, and assures that its courses and programs are state of the art and relevant.

Corporate Advisory Board Members
Mark Chardack
Chief Financial Officer
LextraNet.com

Patrick S. Finn
Director, Northeast Market Development
CISCO Systems

Edward Fitzpatrick
First Deputy Controller
City of New York

John Gilbert
Executive Vice President, COO
Rudin Management Inc.
Chief Technology Officer

Visiting Professor, Skolkovo Business School, Moscow

Professor Shlomo Maital
Technion Institute of Management
Tel Aviv, Israel
Goals and Objectives

The Bachelor of Science in Business and Technology Management (BTM) Program is anchored on certain overarching themes, including:

- Achieving prowess through innovation, technology management and entrepreneurship.
- Leading based on a broad understanding of technology’s role in the modern enterprise.
- Developing a global perspective of modern value creation.
- Committing oneself to service to the community.
- Adhering to the highest ethical standards.
- Obtaining practical exposure—through internships, speakers, on-site visits in New York City, etc.—to the latest best practices in management, especially as related to technology and innovation management and entrepreneurship.

BTM is oriented toward current and future arenas where high growth occurs. The program assumes that modern business leaders must be deeply familiar with technology and innovation. Those who have such knowledge are likely to have a distinct advantage and prosperous and satisfying careers. When appropriate, these leaders also can leverage entrepreneurship in diverse venues. The BTM Program prepares students to become such leaders.

BTM also provides students with relevant professional management education and effective approaches related to technology, innovation and information management and entrepreneurship. In other words, BTM creatively fuses modern business administration with state-of-the-art technology management.

The BTM Program also offers rigorous training in the qualitative, quantitative and innovative aspects of technology and innovation management. All courses nurture a broad managerial background along with specific application of ideas and practices relevant to the world of technologically innovative goods and services.

The art and science of management also demand that practitioners communicate ideas effectively. Therefore, as central components of the BTM learning experience the program emphasizes spoken and written presentations in individual, team, classroom and field internship settings.
Students completing BTM are prepared to succeed in a variety of positions—such as technology project leaders, technology entrepreneurs, venture capitalists, technology and IT analysts for various organizations, consultants in professional-services firms, marketing and business-unit managers for new products and services, and a variety of other exciting roles. BTM graduates work in large and small companies and they excel at jobs that require a cross-functional understanding of both technology and the motivational, financial, innovative and international challenges that need to be met for innovation to succeed. BTM students are also well prepared for advanced professional studies in management, such as in a MS in Management, MBA, or MS in MOT, program, as well as more scholarly and research-oriented programs, such as PhD studies.

**Pedagogy**

Management courses are taught using a variety of pedagogical methods. These include:

- Theory-led teaching
- Case-method education
- Project-based and team-based teaching
- Action learning in the field

**Experiential-Based Learning**

Teaching based on exposition of theory is often relevant to technology management classes. Case-method teaching emphasizes real-world business experiences and challenges students to draw general principles from many examples. Project-based and team-based education is experiential; students learn by doing, much as they would in a natural sciences laboratory class. Learning by doing in the field is also encouraged. It is very common in management courses for all pedagogical approaches to be employed.

**Course Distribution**

The BTM Program requires 128 credits for graduation. Key characteristics* of this curriculum include:

- 60 credits in management
- 34 credits in courses in humanities and social sciences
- 10 credits in courses in mathematics
- 10 credits in “restricted” electives chosen from math, science, social sciences and humanities
- 6 credits in science
- 4 credits in computer science
- 3 credits in a “technical” elective
- 1 credit in the Engineering and Technology Forum

*Please see the Typical Course of Study for the BS-BTM at the end of this section.

Currently, management courses for the BS in BTM are each 4 credits. This new curriculum accommodates 3-credit courses in humanities and social sciences, as well as 3-credit courses in the sciences.

**Course Numbering**

BTM courses are numbered with the following schema:
• The first digit of a course number corresponds to the year in which a BTM student would take the course (1 = first year, etc.)
• The second digit reflects the primary nature of the course material. Courses numbered with a second digit of
  “0” are focused primarily on processes in management
  “1” are oriented toward organizational behavior
  “2” are quantitative in nature
  “3” describe a firm’s relationships with external forces
  “4” study innovation
  “5” are capstone courses
  “6” are Internship and Service courses

Thus, MG 3304 Introduction to Supply Chain Management is a 4-credit junior-year course focusing on external relationships.

Concentrations

Students in this degree program may focus their study in one of two areas of concentration, which focus on particular issues and strategies that apply to business and technology management:

1. Technology Innovation Strategy enables students to develop effective skills for conducting strategic analysis addressing marketing, logistics, channel and operations management issues, as well as relevant best business practiced in the technological arena.
2. Technology and Innovation in Finance prepares students to understand financial theory and how firms use modern finance for strategic and tactical decision-making.

Candidates who choose the first concentration complete MG 3304 (Introduction to Supply Chain Management) in their 6th semester and MG 4004 (Management Strategy in Technology Sectors) in their 7th semester. Students electing the Technology and Innovation in Finance concentration of study take MG 3214 (Advanced Corporate Finance) and MG 4204 (Management Science) at these points in their careers as students.

Degree Requirements

To remain in good standing, candidates for the degree BS-BTM must satisfy the following requirements, in addition to NYU Poly requirements for a minimum term and cumulative 2.0 GPA in all courses:

- An average of C (2.0) or better in all MG courses must be maintained.
- A course in which the grade of I is received may not be used to satisfy any prerequisites until the incomplete is resolved.

Honors Capstone

(Including Thesis and Honor’s Thesis)

Students who earn a 3.6 GPA or better in MG courses through their junior year of study qualify for honors senior project capstone courses. These students are also free to not elect this project sequence.

As part of the Honor’s Capstone course, students who earn a 3.6 GPA or better in MG courses through their junior year qualify for an optional MG 4904 BS Thesis in Business and Technology Management and follow the guidelines as outlined in the Academic Policies and Degree Requirements section of this catalog. They are advised to meet with the BTM Program Director before completing their junior year.

Transfer Students

Courses at other schools may or may not be granted transfer credit and require an evaluation of the content and level of material covered. Periodic reevaluation of courses at other institutions may lead to a variation in the number of credits granted from year-to-year. Thus, students completing the same program, but in different years, may receive different amounts of transfer credit.
Transfer students must present their records for evaluation at least two weeks before the regular registration period for their first semester.

**Information**

Curricula and prerequisite changes, new courses, special sections and other special announcements are posted in the Department of Technology Management office suite and on the program’s website at www.poly.edu. Students are responsible for keeping informed, tracking their progress and are encouraged to visit the BTM Program Director.

The current 128 credit BS in BTM curriculum, which comprises 4-credit and 2-credit BTM courses, continues to be under review. The BS in BTM is intended to evolve into a 128-credit curriculum comprising 60 credits of 3-credit BTM courses in order to provide a more flexible and diverse academic experience. No loss of credit for currently enrolled BTM students would occur.

**Minor**

**Management Minor**

Students may obtain an undergraduate minor in management by completing 14 credits of management courses, which must include MG 1002 Foundations of Management. An overall GPA of at least 2.0 must be maintained in these classes. At least 8 of the 14 credits must be taken by students while enrolled at NYU-Poly.

**Bachelors**

**Business and Technology Management, B.S.**

**Typical Course of Study for the Bachelor of Science in Business and Technology Management**

See Footnotes 14 and 15

**Freshman Year**

**Fall Semester: 15 Credits**

**EG 1001 Engineering and Technology Forum**

*1 Credits* In this course, the notions of invention, innovation and entrepreneurship (i2e) are brought to the forefront of students’ educational experience in an effort to introduce undergraduates to elements of a research-intensive institution and encourage
intellectual and scholarly interaction with their peers and faculty. This course includes presentations and discussions on emerging and exciting topics by leading engineers, scientists, inventors and entrepreneurs discussing case studies on innovations, inventions and entrepreneurship as well as relevant contemporary and emerging environmental-, economic-, global-, energy- and health-related topics. The course exposes students to an array of collegiate academic skills such as the elements of a research-intensive institute, information-technology resources and ethics in science and engineering, as well as discussions of student life-related topics and issues.

Weekly Lecture Hours: 1 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MA 1054 Calculus I with Precalculus**

4 Credits This course covers limits, definition of the derivative, differentiation rules for polynomial and trigonometric functions, applications of the chain rule and introduction to optimization. This Calculus I course provides an indepth review of precalculus.

Prerequisite(s): Placement exam, MA 954, or MA 912 or equivalent. Corequisite(s): EG 1 Examination Hour

Note: course required only for specific majors in place of MA 1024/1324.

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**EW 1013 Writing the Essay**

3 Credits This is the foundational writing course. It provides instruction and practice in critical reading, creative thinking, and clear writing. It provides additional instruction in analyzing and interpreting written texts, the use of written texts as evidence, the development of ideas, and the writing of both exploratory and argumentative essays. The course stresses exploration, inquiry, reflection, analysis, revision, and collaborative learning.

**CS 1114 Introduction to Programming and Problem Solving**

4 Credits This course introduces problem solving and computer programming and is for undergraduate Computer Science and Computer Engineering majors who have limited prior experience in programming in any language. The course covers fundamentals of computer programming and its underlying principles using the Python programming language. Concepts and methods introduced in the course are illustrated by examples from various disciplines.

Corequisite(s): EG 1 Examination Hour

Note: Weekly laboratory required.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 3 | Weekly Recitation Hours: 0

- Science/Engineering Elective (1) 3 Credits

**Spring Semester: 13 Credits**

**MA 1252 Calculus for Business and Life Sciences IIA**

2 Credits This course covers antidifferentiation, the definite integral, integration by substitution, the Fundamental Theorem of Calculus, area enclosed between curves, average value, integration by parts, introduction to differential equations, improper
integrals, numerical integration.

Prerequisite(s): MA 1054. Corequisite(s): EG 1 Examination Hour
Note: Course required only for specific majors.

Weekly Lecture Hours: 6 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 1002 Foundations of Management

2 Credits This course introduces the principles and practices of management. Management is viewed as a system of tasks and activities, including environmental scanning, planning, organizing, leading and controlling. Within each major task, is a series of processes, which show how to do what has to be done. Management is a science and an art; both aspects of management are covered in this course. Major emphasis is on management history, philosophy and the theory and practice of management planning, decision making, organizing, motivating and leading.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

EW 1023 The Advanced College Essay

3 Credits This course follows EW 1013 and provides advanced instruction in analyzing and interpreting written texts from a variety of academic disciplines, using written texts as evidence, developing ideas, and writing argumentative essays. It stresses analysis, argument, reflection, revision, and collaborative learning.

Prerequisite(s): EW 1013.

- Technical Elective 3 Credits
- Science Elective(2) 3 Credits

Sophomore Year

See Footnotes

Fall Semester: 18 Credits

MG 2204 Financial Accounting

4 Credits This course provides a solid foundation in constructing and interpreting financial statements. Topics include: accounting terminology, financial-statement preparation and analysis, liquidity and credit-risk ratios, depreciation calculations, revenue recognition, accrued liabilities and asset valuation. Also covered are the effects of equity transactions, cash flows and various accounting methods on financial statements.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 2004 Management of Information Technology and Systems
This course provides a foundation to understand the role and potential contributions of information technologies and systems in business organizations—what they are, how they affect the organization and its employees, and how they can make businesses more competitive and efficient. The course focuses on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process reengineering, knowledge management and group-support systems.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 2104 Organizational Behavior**

This course focuses on the study of human behavior in innovative organizations. Emphasis is on teams, leadership, communication theory and organizational culture and structure. The course includes analyses of organizational behavior problems through case studies and participation in experiential learning.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences3)
- Restricted Elective 1 3 Credits

**Spring Semester: 16 Credits**

**EC 2524 Managerial Microeconomics**

This advanced course in microeconomics for students with appropriate mathematical background. This course presents microeconomic analysis and its application to business decision making. Fundamentals of the Theory of the Firm, the Theory of the Consumer and market structure and competition are presented, including both theoretical models and quantitative analysis techniques. Advanced topics in information asymmetries and externalities are presented.

Required for students in the BTM Program.

Prerequisite(s): MA 1252 Calculus for Business and Life Sciences IIA

Note: Does not satisfy general education requirements in humanities and social sciences. Offered and administered by Department of Technology Management.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 2304 Marketing**

This course is an undergraduate introduction to marketing. It discusses the fundamentals of marketing; e.g., the marketing mix, the role of the customer, marketing research and survey techniques. In addition, emerging marketing paradigms, like relationship marketing and online marketing, are introduced.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 2014 Operations Management**
A firm has the opportunity to create competitive advantage through proficient operations management. To do so, the firm first must recognize and establish the strategic role of its operations within the organization. Then, at the more detailed operational level, the firm must execute effectively and efficiently. This course examines the strategic role that the operations function can play and offers specific tools and techniques that a firm can use during implementation.

**Prerequisite(s):** 4 credits of calculus.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### MA 2054 Applied Business Data Analysis I

4 Credits This course covers applications of theories of random phenomena to problems in business management. Topics include probability theory, discrete and continuous probability distributions, sampling, measures of central value and dispersion, sampling distributions, statistical estimation and introduction to hypothesis testing. Use of statistical software is integrated with the previous topics; examples are drawn from problems in business decision-making. Applications to advanced statistical applications in business management. Emphasis is on application of concepts. Use of statistical software integrated with the previous topics.

**Prerequisite(s):** MA 1054 or equivalent.
**Note:** Course required only for Management Majors. Credit for this course may not be used to satisfy the requirements for other majors.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### Junior Year

See Footnotes

**Fall Semester: 16 Credits**

### MG 3204 Introduction to Finance

4 Credits This course introduces business finance for BTM majors. It emphasizes the financing and investment decisions of the financial manager, with special emphasis on examples from technological environments. Included are topics such as time value of money, asset valuation, risk analysis, financial statement analysis and capital budgeting.

**Prerequisite(s):** MA 1024 and MA 1124 or equivalents and and MG 2204.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

### MG 3024 Management of Data Communications and Networking

4 Credits This course introduces the fundamentals of modern telecommunications and networking such as components of data communication, data transmission, open-system interconnection (OSI), TCP/IP and other models, data link and network layers and local area networks (LANs). The course focuses on managerial issues related to the management of data communications and networking technologies.
Prerequisite(s): MA 1024 and MA 1124 or equivalents and MG 2004.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 3002 Project Management

2 Credits This course provides students with practical and best-practice project management theory, concepts and (hands-on) practical experience so that they may contribute effectively to and lead multicultural team projects framed for the new global economy. The practical component includes a team-based project that spans the duration of the course.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

PL 2143 Ethics and Technology

3 Credits This course considers how technology shapes and patterns—and is shaped and patterned by—human activities, from a moral point of view. This course focuses on how the technologically textured world changes human life, individually, socially and culturally, for better or worse. The course considers several views of technology and several ethical theories for evaluating technology. The course explains the structures of change and transformation and develops critical forms of thought, so that students can understand, evaluate, appreciate and criticize technological development.

Prerequisite(s): EW 1023 or EN 1233W or EN 1203H.
Note: Satisfies a humanities and social sciences elective.

Spring Semester: 17 Credits

MG 3404 Innovation Management

4 Credits This course examines the key managerial features of technology-enabled innovation and new product development. It focuses on accessing innovative capabilities through R&D, acquisition, alliances, joint ventures and innovation-friendly cultures and organizations. The key perspective underlying this course is managerial. Although the innovation activities studied are overwhelmingly technology enabled ones, success is largely determined by managerial factors. The interplay between the technology and management leading to innovation is a major concern of the discussion and work in this course.

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 3304 Introduction to Supply Chain Management

4 Credits This course provides an undergraduate-level introduction to supply-chain management. The underlying objective is to introduce key supply-chain management concepts and examine relevant business practice. This course enables students to develop useful skills, in an increasingly global context, to analyze marketing, logistics, operations and channel management issues.

Prerequisite(s): MG 2004, MG 2304 and MA 2054 or MA 2212 with MA 2222.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MG 3214 Advanced Corporate Finance

4 Credits This course builds on the principles of basic corporate finance covered in MG 3204. It prepares students to understand financial theory and how firms use modern finance for strategic and tactical decision-making. The critical issue of how these decisions affect the value of a firm and the returns of assets is addressed. Major topics include bond valuation, the CAPM model, portfolio design and modeling and option pricing using the Black-Scholes model. A strong emphasis is placed on using spreadsheets as a financial-modeling tool.

Prerequisite(s): MA 1252 and MG 3204.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Restricted Elective(2) 3 Credits
- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences6) 2
- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences7) 2

Senior Year

See Footnotes 11

Fall Semester: 16 Credits

MG 4004 Management Strategy in Technology Sectors

4 Credits This course provides an overview of the process of implementing a successful management strategy in an information-, technology and knowledge-intensive environment. Fundamental topics include the development of strategic vision, objectives and plans; implementation of strategy and the evaluation of performance; industry and competitive analysis; SWOT analysis and competitive advantage and sustained advantage. Advanced concepts include strategic positioning in global markets, Internet strategy, strategy in diversified firms and interactions between organizational structure and strategy and between ethics and strategy.

Prerequisite(s): MG 3204 and MG 3404.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
or

MG 4214 Financial Strategy

4 Credits This course deals with the financial strategy of modern firms. Topics include planning and implementation of financial strategies for start-up businesses and the utilization of venture capital; diverse issues related to designing financial strategies of rapidly growing companies after experiencing an IPO; challenges in constructing a financial strategy while undergoing a major corporate restructuring; key components of financial strategies for companies facing rapidly changing technological and competitive environments; and development of financial strategies for mature companies and declining business.

Prerequisite(s): MG 2204 and MG 3204.
Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 4404 Entrepreneurship
This course focuses on key aspects of entrepreneurship as a critical engine for innovation. It also treats entrepreneurship as a state of mind that is not limited to small firms. Students discuss current theories and practices related to starting and managing entrepreneurial enterprises, emphasizing firms in technology-, information- and knowledge-intensive environments. Particular attention is paid to the critical issues of (1) identifying opportunities that provide competitive advantage; (2) the development of a solid business plan; (3) the marketing of new ventures; (4) entrepreneurial business operations, including human-resource and process management; (5) ethical and social issues in entrepreneurial firms; and (6) financial management and fund raising for entrepreneurial firms.

## Prerequisite(s)
Junior or senior student status.

### Weekly Lecture Hours: 4  |  Weekly Lab Hours: 0  |  Weekly Recitation Hours: 0
- Restricted Elective(3) 2 Credits
- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences2) 2
- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences3) 2

## Spring Semester: 17 Credits

### MG 4504 Global Perspectives on Technology Management: A Capstone Project Course

**4 Credits** This course provides students with knowledge of current theories and practices related to managing international and multinational firms. Students study the ways in which international management differs from the management of a firm residing solely within domestic boundaries. Topics covered include planning, organizing, HR management, communication and negotiation and coordination and control of international endeavors. Case studies are used extensively to focus the class on technological examples of problems in international management. Students undertake a term project that either (1) develops a business plan for a technological international venture, (2) creates a case study of a technological firm’s challenges in international management, or (3) analyzes a technological industry’s position vis-à-vis international management.

**Prerequisite(s):** MG 3002, MG 3024, MG 3204, MG 3304 and MG 3404.

### MG 4014 Introduction to E-Business

**4 Credits** Since its introduction, the Internet has changed how businesses work. In addition to creating new opportunities, the Internet has revolutionized existing businesses and entire industries. This course provides an undergraduate-level introduction to e-business. The main objectives of this course are to (1) provide a hands-on introduction to the emerging area of e-Business, (2) discuss the major business concepts and issues in this domain and (3) develop high-quality content based on team discussion and individual/group research.

**Prerequisite(s):** MG 3204, MG 3002, MG 3304 and MG 3404.

### MG 4204 Management Science

**4 Credits** This course teaches students to create mathematical models of managerial problems. Types of models discussed include linear programming, integer-linear programming, non-linear programming, queuing models, decision-tree models, game-theoretic models, simulation models, inventory models and more. Each model is discussed in the context of the assumptions necessary for modeling and the robustness of the model’s managerial recommendations.
Prerequisite(s): 6 credits of calculus and (MA 2054 or MA 2212 and MA 2222).

Weekly Lecture Hours: 4 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- Restricted Elective (4) 2 Credits
- CAM/STS/SEG Elect 3 Credits (Humanities and Social Sciences)

Total credits required for graduation: 128

Footnotes

1 Students who are placed by placement examination or by an adviser into MA 954 Calculus for Business and Life Sciences IA or MA 914 Precalculus must defer registration for calculus. Upon successful completion of these courses students may then register for MA 1054. Precalculus courses are developmental math courses and no credit is given towards graduation. Consult Department of Mathematics for latest information.

2 Follow latest NYU-Poly Humanities and Social Sciences requirements. See subset below, subject to correction or change to adhere to latest NYU-Poly TCS Department regulations:
   - a. Mandatory Humanities and Social Sciences Freshman Course Fall Semester: EW 1013 Writing the Essay.
   - b. Mandatory Humanities and Social Sciences Freshman Course Spring Semester: EW 1023 The Advanced College Essay.
   - c. Humanities and Social Sciences Elective Requirement (six courses, 18 credits): Six 3cr courses chosen from any of the three Humanities and Social Sciences clusters (CAM/STS/SEG).
   - d. Writing-Intensive Humanities and Social Sciences Elective Requirement: At least one of the six Humanities and Social Sciences electives must be a writing-intensive course labeled by “W.” This Writing-Intensive Requirement will be phased in over a 5 year period. If this course is not available please contact TCS and receive permission to take another Humanities and Social Sciences course.

3 Approved science electives are CM 1004, CM 1014, CM 1024, BMS 1004, Calculus-based physics: PH 1013, PH 2021 and PH 2023, PH 2031 and PH 2033 and noncalculus-based 3-credit Physics courses; PH 1213 and PH 1223. Note: EG 1003 is NOT an approved as science elective for BTM.

4 PL 2143 Ethics and Technology replaces previous PL 4052 Business Ethics and is mandatory for all BTM majors.

5 Restricted Electives are courses in math, science, Humanities and Social Sciences ONLY. Restricted elective Humanities and Social Sciences courses follow the 3 credit Humanities and Social Sciences electives.

6 Students with a 3.6 GPA or better in major at the end of junior year may substitute MG 4514 Honors Capstone Project in Technology, Innovation and/or Information Management and Entrepreneurship I (4 credits) or the MG 4904 BS Thesis in Business and Technology Management for MG 4404. They may also substitute MG 4524 Honors Capstone Project in Technology, Innovation and/or Information Management Or Entrepreneurship II (4 credits) or the MG 4904 BS Thesis in Business and Technology Management for MG 4204. The MG 4904 BS Thesis in Business and Technology Management may take longer than 1 semester to complete and students must follow all NYU-Poly thesis guidelines.

7 Technical Electives can be chosen from computer science, engineering, mathematics, chemistry, physics, bio-molecular sciences, digital media and undergraduate finance courses from the Department of Finance and Risk Engineering. Technical Electives do not count towards the General Education requirements.

8 The Humanities and Social Sciences BTM Mandatory Technology Subset (previously called the Liberal Arts Elective) can ONLY be fulfilled by any ONE of the following 3-credit Humanities and Social Sciences Cluster 2 Science, Technology and Society (STS) courses listed below (with or without a “W” - Writing Intensive - designation):
• HI 3413 History of Intellectual Property in America
• PL 2003 Symbolic Logic
• PL 2103/W Philosophy of Science, Technology and Society in China and India
• PL 2203 Philosophy of Technology
• PL 3203/W Philosophy of Technology: The Critique of Heidegger
• PL 3253/W Philosophy of Science
• PS 2613 Psychology of the Internet
• PS 2643 Creativity and Innovation
• PS 2663 Intelligence: Real and Artificial
• PS 3603 Psychology of Internet Security
• STS 2003/W Science, Technology, and Society
• STS 2113/W History and Philosophy of Internet Technology
• STS 2133W Perspectives on Science and Technology Reporting
• STS 2153 Addressing Public Policy Issues in the Sciences, Engineering and Medicine
• STS 2253/W Biology and Society
• STS 3003/W Seminar in Science and Technology Studies
• STS 3163 Science and Technology in the Literary Sphere

Please note that the above Humanities and Social Sciences electives may also be used as normal Humanities and Social Sciences electives in BTM.

9 MG 2104 Organizational Behavior is a BTM requirement and does not count as a Humanities and Social Sciences course.

10 Students must select a BS-BTM Concentration by the end of the fall semester of the junior year. Current BS-BTM Concentrations: Technology Innovation and Strategy Concentration (Strat. Concent.) and Technology and Innovation in Finance Concentration (Fin. Concent.).

11 BTM students have several internship options. They may register for MG 4603 Technology Management—Internship and Service for 3 credits for one semester only and as per the stipulations described in the BTM course description section. Also, students may register for CP 101 and CP 201, both provided by the Career Management Center. Internships generally run for 2 to 3 months the first year of study. No credit is offered towards the BS BTM degree for MG 4603 or for the above CP courses, but they all shall appear on the NYU-Poly transcript.

12 HI 2103/W found previously here as a Humanities and Social Sciences mandatory course is no longer a requirement and is replaced by a Humanities and Social Sciences elective (Humanities and Social Sciences3 CAM/STS/SEG Elec).

13 MA 2054 may be substituted with MA 2212 (Data Analysis I) together with MA 2222 (Data Analysis II), for 4 total credits, only with the pre-approvals from the BTM Program Director and the Mathematics Department.

14 Grandfathering rules may apply.

15 This chart is for incoming Fall09 BTM Freshman and onwards.

Note: THIS CHART IS ALSO USED FOR ADVISEMENT AND BS BTM DEGREE REQUIREMENT AUDIT CHECKLIST. ALL INFORMATION IS SUBJECT TO REVISION.

Information Management Executive Master's (eIM)

Program Director: Joseph Nadan

Goals and Objectives
The Information Management Executive Master’s Program (eIM) delivers a high-level learning experience focusing on the intersection of broadly defined information technology and management, which is at the heart of the modern economy. Offered by Polytechnic for over two decades, the Information Management Program (eIM) is geared for the growing set of professionals who must use information and networking technology and the Internet for carrying out critical tasks and in developing and delivering value within their organizations and for customers.

IT managers must learn how to innovate in a world in which the use of wireless and Internet-based technologies has changed traditional organizational structures into a seamless, 24/7 global entity. eIM participants learn how to be effective by capitalizing on an advanced IT infrastructure, which has accelerated product lifecycles, enlarged the diversity of sources of innovation, and intensified global competition.

**Key Characteristics in the eIM Program**

- Provides knowledge to manage information-intensive corporations.
- Focuses on strategic implications of technology and innovation and entrepreneurship.
- Encompasses innovation management in all modern information arenas such as financial and professional services, media/entertainment, bio-medical/pharma/chemical, new materials, IT and telecommunications.
- Deals with the impact of information and innovation throughout an enterprise.
- Addresses physical, digital (including Internet-based) and mobile innovation.
- Enables key transition from information specialists to high-level, effective information managers.
- Assumes a global perspective.
- Explores and develops new business models based upon information-enabled innovation.

In the eIM curriculum, even traditional subjects such as finance, operations management and marketing are taught with information-enabled-innovation issues in mind. Subjects, concepts and issues directly related to information management and accessing innovative capabilities that form the eIM Program core include:

- Customers, suppliers and other partners as sources and co-creators of innovation;
- New product and services development;
- The global search for innovation and information technology and choosing among increasingly global information sources and markets, including Europe, the Pacific Rim, Israel, India and others;
- Entrepreneurship;
- Integrating information technology and management;
- Venture capital and venture creation;
- The Internet and the Web-innovation as new platforms for innovation;
- Innovation-friendly cultures and organizations;
- The IT-innovation connection;
- Revitalized R&D;
- Advanced products and services;
- Strategic information planning and innovation-intensive new product business models;
- Knowledge management;
- Information selection and acquisition; and
- Multiple and diverse levers for information-enabled innovation.

The program is well-suited for engineers and scientists with increasing managerial responsibility, and for professionals, functional and business managers in finance, banking, telecommunications, design, retailing, media/entertainment and other environments increasingly dependent on information.

eIM is an executive program. As such, it has the following general features:

- Full-semester and half-semester courses to use limited time effectively;
- Carefully selected elective courses to maintain flexibility in meeting diverse professional needs;
- A blend of live classes and modern Web-based technology;
- Effective information technology-enabled remote-collaboration learning and teamwork learning materials that are often in digital Web-based format to capitalize on Internet-based technologies and methods.

eIM also has more focused concentration areas: Information Management (IMCIO) and Information Management in Information Security and Privacy (IMCISO).

eIM classes are held every other week on Wednesday or Thursday evenings and all day Saturday at 55 Broad Street, in the heart of lower Manhattan. An all-inclusive fee covers tuition and fees, textbooks and other educational material, special tutorials and lectures and meals on class days. For the most current information go to http://www.poly.edu/academics/programs/informationmanagement-executive-ms.

Executive Format

The eIM Program is based on a cohort system in which all participants enter at the same time and take the same courses throughout the program except when electives are selected. eIM is a rigorous 15-calendar month, four-semester state-of-the-art program.

Additional features of the executive format include:

- Close interaction and teamwork;
- A professional, modern, and informal learning environment;
- Close collaboration with respected partners in industry and relevant scholarly communities;
- A curriculum that is continually updated; and
- Participants viewed as partners in the learning process (in class and in the joint generation of intellectual capital as presentations, reports or cases—in paper and digital formats).

Key Benefits of the Information Management (eIM) Program At NYU-Poly

Key benefits of the program include:

- An emphasis on information technology, nurturing innovation and entrepreneurship;
- Integration of local, regional and global perspectives;
- Active involvement of highly respected faculty in management and engineering and applied science;
- A focus on leadership;
- A holistic educational approach that connects the worlds of technology and business;
- Modern learning methods, e.g. individualized and team-based coaching, experiential project-based education, and advanced learning platforms;
- Close involvement with leading companies, entrepreneurial ventures, and professional services firms;
- Information reflective of modern value creation as practiced in the nation’s most advanced global city; and
- Participants who complete this program will receive a Master of Science in Information Management from the Polytechnic Institute of New York University.

Location

The Executive Master’s Program in Information Management is offered at our Manhattan Graduate Center in the Wall Street financial district.
Coaching and Mentoring Program

The NYU-Poly Technology Management Department faculty recognizes the impact that mentors and coaches have in accelerating the development of aspiring managers. All full-time Executive students participate in this unique Coaching and Mentoring Program that includes individual and group meetings with a coach/mentor. Each full-time Executive student has a one-on-one intake interview with their coach/mentor and is then encouraged to seek advice on significant work related presentations and special situations. The coach/mentor and student then develop a Personal Development Plan based upon the intake interview and several confidential online assessments, and then review progress against its objectives at least once a semester. The continuing program consists of group meetings held once a month during which topics of common interest are discussed and to-be-scheduled individual sessions in which the student may discuss matters on a confidential basis with their coach/mentor.

Optional Course Auditing

Full-time Executive students may elect, at no additional costs and with permission from the Program Director and Instructor, to supplement their degree program by auditing one additional course per semester within the Graduate School.

Guest Speakers

The Metro NYC area is blessed with an abundance of thoroughly experienced highly-qualified technology managers that have valuable knowledge and insight into many of the topics that are taught in the eMOT and eIM programs. Professors often invite guest speakers to their classes to enrich coursework and enable our students to learn from their experiences and have an opportunity to discuss timely topics directly with them.

Jump Starting Entrepreneurship

NYU-Poly introduced a new mode of education we call invention, innovation and entrepreneurship (i^2e). We believe that research universities have to expand to provide not just education and research, but economic impact. Students in our executive programs embody this philosophy by managing technological innovation to launch new products, services and businesses within their own companies or as startups within our business incubation centers.

Admissions Requirements

Admission to the eIM Program is based on an in-depth evaluation of a candidate’s academic record, work experience and overall intellectual and professional qualifications and potential. Applicants must demonstrate strong commitment, and an ability to benefit professionally from the rigorous 15-month executive program. Because of the heavy demands of this program, it is important that employers also explicitly support such professional education. In general, GRE and GMAT tests are not required for applying to the eIM Program. But the Department of Technology Management may ask an applicant to submit scores later in the admissions process. The Program Director will schedule interviews with applicants to assure that they are ready for the commitment involved in this program. This program does not accept transfer credits. Applicants should apply online at www.poly.edu/academics/programs/management-technology-ms.

How to Apply

The Executive Master’s Program uses an admission process called the Self-Managed Application (SMA). Applicants must gather the materials required by the program and forward them in a single envelope to:
Application Checklist

1. Complete the application and attach a copy of your professional resume and the application fee.
2. A Statement of Purpose that describes in brief your:
   a. Prior background and experience
   b. Motivation in pursuing graduate studies
   c. Long-term career goals
3. Please ask the registrar at all colleges and universities you attended to send official transcripts directly to you. For these documents to remain official, they must be sealed in the original envelope. Opened transcripts are not considered official.
4. Please arrange for two (2) letters of recommendation to be sent directly to you. These letters are generally from a supervisor or high-level colleague who is familiar with your professional work. As with transcripts, to be considered official, recommendations must be sent directly from the recommender to the applicant unopened. Use the enclosed forms for this purpose. Write your name at the top of this form, sign the waiver (which waives your right to see the recommendation) if you wish, and give one form and one of the enclosed envelopes to each person writing to support your application.
5. The final step for admission is a personal interview with an Academic Co-Director to discuss career objectives and to ensure that the program fits your goals.

For more information, contact the eIM Program Administrative Director:
Tel: (718) 260-4015
Fax: (212) 547-7029
Or e-mail: mot-im@poly.edu

Masters

Information Management Executive (eIM), Information Management (IM) Concentration, M.S.

eIM Curriculum

The eIM 36 credit curriculum consists of 24 credits of core courses and 12 credits of elective courses. To give students greater flexibility in choosing electives, the program has both full-semester courses that are 3.00 credits each and half-semester courses (marked with **) that are 1.50 credits each. Students may substitute one full-semester elective with two half-semester electives or vice-versa.

Core Courses

First Semester
MG 6093 Accounting and Finance

3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6903 Managerial Decision Making for Information-Intensive Businesses

3 Credits This course introduces managerial decision making and strategies, emphasizing information-intensive businesses and the fastchanging environment in which they compete. This course explores such issues as competing in both the digital and physical spaces, technology as an enabler of change, the role of the professional manager and managing in an increasingly globalized environment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8703 Introduction to Modern Information Technology Strategy

3 Credits This course deals with applied competitive strategy. Students completing this course master a basic understanding of the competitive implications of information technology and the strategies for using information technology in business. This competence in analysis is arrived at through understanding how availability of information (through technology or otherwise) affects the basic strategic options available, and how firms and industries are likely to be affected. In addition, students are introduced to the process of evaluating potential systems innovations. They then are able to participate in strategic and systems planning from a managerial point of view.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Second Semester

MG 6083 Economics

3 Credits The course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6303 Operations Management
3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Full-semester Elective

Third Semester

MG 6073 Marketing

3 Credits This course covers marketing concepts, processes and institutions. Topics: Positioning, segmentation and product-life cycles. Integration of marketing with new product planning, design and development. Strategies for technology-based products, services and processes. Market research, consumer behavior, advertising, promotion and sales. The special character of governmental and international markets.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Full-semester Elective

MG 9611 eIM Capstone-2

1.5 Credits Second half of the eIM Capstone course. Please see MG 9603 eIM Capstone Project Course for full description. Both MG 9601 and MG 9611 courses may be taken in same semester.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Half-semester Elective **

Fourth Semester

MG 8203 Project Management

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Full-semester Elective

MG 9611 eIM Capstone-2
1.5 Credits Second half of the eIM Capstone course. Please see MG 9603 eIM Capstone Project Course for full description. Both MG 9601 and MG 9611 courses may be taken in same semester.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Half-semester Elective **

**eIM Concentrations**

Elective courses are grouped into three different areas of interest referred to as concentrations:

- The Information Management (IM) business- driven base program concentration trains information-technology-based professionals to lead and oversee the process of invention, innovation, and entrepreneurship — what we call i2e.
- The Information Management (IMCIO) concentration allows information-technology professionals to develop their management and leadership skills with a focus on running IT as a business and receive certification from New York State (pending approval) as a CIO.
- The Information Management in Information Security and Privacy (IMCISO) concentration allows information-technology- based professionals to develop their management and leadership skills with a focus on cyber-security and receive certification from New York State* as a CISO.

Note:

* New York State CISO certification from Global Information Cyber Security Association

**Suggested Full-Semester Elective Courses Grouped by Concentration**

All full-semester elective courses are 3.00 credits. All eIM students may, with the written permission of the Program Director, substitute any of the following courses for any full-semester elective:

**MG 8573 Managing Cleantech and Renewable Energy Innovation**

3 Credits This course focuses on the rise of cleantech/ renewable energy (aka sustainability green, etc.) as a possible major locus of Twenty- First-Century innovation. The course deals with the diverse ways innovation is taking pace in the broadly defined cleantech arena. The course covers technology management in several distinct cleantech/renewable technology regimes and varied company venues (e.g. small, medium size and large firms). The encompasses local and global modes of cleantech/renewable energy innovation. The course requires single-firm, multi-firm and “systems” perspectives for understanding with cleantech/renewable energy innovation. The course employs both intellectual and practitioner- oriented orientations. Throughout, this course maintains a primarily managerial perspective. Students are often asked to assume the role of managers charged with the responsibility of designing, supporting and implementing a cleantech/renewable energy innovation strategy. An overarching concern is on discovering ways to improve the effectiveness of cleantech/renewable energy innovation and technology management and, where appropriate, entrepreneurship.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8783 Managing Cloud Computing**

3 Credits Many corporations and governments around the world are either planning or are in the process of migrating into a “Cloud”. Cloud computing as a technology is proliferating at a rapid pace, and as such, there are myriad definitions, architectures, and models that are being developed. Cloud is a significant part of information management, and business managers should become well versed in managing and leading this cutting edge technology. They need to clearly understand how
IT components such as virtualization, automation and security fit into and define a Cloud. This course provides a Comprehensive overview of managing cloud computing. The course starts by developing a comprehensive technology foundation and then deals with the economics of cloud computing by analyzing its benefits, risks and obstacles. The course then examines Virtualization, Automation, and Security, the three essential components of cloud computing. Specific case studies on private and public clouds are illustrated. The course concludes with the development of specific templates and roadmaps that help an organization migrate from managing traditional IT into a cloud based infrastructure.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 9683 Internship and Action Learning

3 Credits This course provides graduate students the opportunity to work in an organization relevant to their field of interest in an action-learning context under faculty supervision. It exposes graduate students to relevant, state-of-the-art and best practices in modern management from the perspective of reflective involvement and interaction in the field. Students submit a paper and oral presentation based on work accomplishments as well as a review of written evaluation by the onsite supervisor. This course may be taken only once.

Prerequisite(s): Approval of the Program Director
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

All eIM students may take full-semester electives from any of the following concentration areas:

Information Management (IM)

Second semester:

MG 8753 Information Technology: Systems

3 Credits This course prepares the student to be an educated consumer of information technology systems, thereby maximizing the strategic advantage of IT to an organization. Information technologies, architectures and products are categorized and analyzed with a view to develop and maintain the most favorable IT asset portfolio to carry out successfully business goals and strategies. Students learn techniques for making group decisions in assessing technology, outsourcing decisions, bidding on projects and negotiating contracts. Students also learn to manage a reliable, high-quality portfolio of information-technology systems, based on new insights into the relationship between the technology and business needs.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Third semester:
MG 8763 Information Technology: Operations

3 Credits This course covers IT operations and services. Students learn to deliver reliable, high-quality IT services through an automated, optimized IT infrastructure and operation, based on new insights into the relationship between those services and business needs. Topics covered: IT governance, data center automation, infrastructure optimization, service management, application performance management, and security management.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Fourth semester:

MG 7743 Advanced Trends in Technology Management and Innovation

3 Credits This course explores several emerging trends in the technology management and innovation arena in the past decade. These trends include the advent of digital-based innovation in the late 1990s, which has affected profoundly how many firms conduct business; the effect of the crash of the NASDAQ in March 2000 and the September 11 attack that affected corporations, which then had to operate within major economic and creative constraints; the development of the concept of networks as it relates to a firm’s organization and strategy; the development of the wireless technology platform and its effect on technology innovation; and the development of a new innovation paradigm that suggests a relationship between information technology, creativity and business practices. The course emphasizes classroom discussions and team-based and individual projects.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Half Semester Elective Courses

All half-semester elective courses are 1.50 credits. All eIM students may take any of the following half-semester electives.

MG 7841 Negotiation in Technology Intensive Sectors

1.5 Credits Negotiation is the art and science of creating good agreements. This course covers the science of negotiation by discussing and applying theories of negotiation. The art of negotiation is learned by practice. Students develop the art by negotiating with each other in realistic cases. A wide variety of negotiation applications is covered, including one-time and repeated negotiation, single and multi-issue negotiations, and two-party and multiparty bargaining. The class emphasizes negotiations in technology-intensive environments. This class is taught using the case method. Many examples are cases that students negotiate with each other. Students’ grades are based on their performance in these negotiations and on class participation.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 7851 Leadership

1.5 Credits Leaders set a vision, communicate it well and influence and inspire others to achieve their vision. However, leaders face many challenges in effectively meeting these objectives and can be aided or handicapped by effective and ineffective methods. This course develops the student’s leadership approach by analyzing individual styles, understanding their impact and then enabling each student to create the right leadership style. This course addresses fundamental leadership issues and frameworks, drawing on current organizational research, but most of all it provides students with ways of getting insights on their
own leadership style. The course emphasizes hands-on experience and focuses on experiential learning. Course objectives include assessing leadership styles; developing leadership skills; and understanding the role of leadership coaching in managing teams.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7861 High-technology Entrepreneurship**

*1.5 Credits* This course focuses on entrepreneurship as a critical engine for wealth creation in the high-technology, innovation-intensive economy. It covers such key issues as: (1) assessing attractiveness of opportunities; (2) launching a new venture; (3) obtaining the necessary financial, human and technology resources; (4) managing the transition from a small entrepreneurial firm to a large, sustainable professionally managed but still entrepreneurial corporation; and (5) being an entrepreneur and promoting entrepreneurship in a large corporation.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7871 Intellectual Property for Technology and Information Managers**

*1.5 Credits* This course focuses on the role of intellectual property (e.g., patents, trade secrets, copyrights and trademarks) as a major element in modern technology and information strategy. Relevant concepts and case studies are used, with examples representing classical and digital innovations.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7881 Modern Supply Chain Management: Integration Through Technology**

*1.5 Credits* This course introduces the role of information technology in supply-chain management. Both qualitative and quantitative aspects of supply chain management are covered. Students discuss and analyze articles pertaining to leading-edge research and management thought. The underlying objective is to prepare participants to develop useful skills for analyzing technology, marketing, logistics, operations and broader channel management issues. Classes use the case method. A high level of class interaction is expected.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7891 Special Elective Topics for EMOT and EIM**

*1.5 Credits* This course covers selected key emerging trends and issues in the MOT and IM domains. The course involves discussion with industry leaders and specialists from business, government and academia. The course includes topical treatment of technologies, markets, business practices, government regulations and the relationships among them.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7971 Financing for Value Creation**

*1.5 Credits* This course focuses on creating strategies and financial skills required by managers of entrepreneurial and innovative firms at various stages of evolution: from new, stand-alone entrepreneurial ventures to innovative, technology driven projects of established corporations.
MG 9651 The Modern CIO: Challenges and Opportunities

1.5 Credits The Chief Information Officer (CIO) role has evolved from keeper of the infrastructure under the CFO, to an executive managing the organization’s information and sitting at the executive table. The CIO is the key strategic agent for the organizational use of technology and is the key agent in the creative-destructive process mediated by technology. Today technology is the single greatest factor in strategic change in a firm. The CIO is the executive best positioned to manage the creative-destructive power of technology and effect firm sustainability in the face of massive changes in markets. This course helps aspiring CIOs investigate this new and evolving role, using presentations, research and interviews of industry and public sector CIOs and CTOs as well as studying the market demands for CIOs and CTOs.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 9691 The Modern Chief Information Security Officer: Challenges and Opportunities

1.5 Credits The role of Chief Cyber Security Officer or Chief Information Security Officer has evolved from securing computer systems under the CIO to an executive managing the organization’s information security and sitting at the executive table. The officer is a key strategic agent for the organizational use of cyberspace. The CISO has become the key player in the increasingly dangerous and insecure area of cyberspace, where firms must operate for maximum competitive advantage. The CISO is the executive best positioned to manage the security of the firm’s assets/infrastructure and operations in cyberspace. This course helps aspiring CISOs investigate this new and evolving role, using lectures, research, and interviews of industry and public sector CISOs, as well as by studying the market demand for CISO positions.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Information Management Executive (eIM), Information Management (IMCIO) Concentration, M.S.

eIM Curriculum

The eIM 36 credit curriculum consists of 24 credits of core courses and 12 credits of elective courses. To give students greater flexibility in choosing electives, the program has both full-semester courses that are 3.00 credits each and half-semester courses (marked with **) that are 1.50 credits each. Students may substitute one full-semester elective with two half-semester electives or vice-versa.

Core Courses

First Semester

MG 6093 Accounting and Finance
3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6903 Managerial Decision Making for Information-Intensive Businesses**

3 Credits This course introduces managerial decision making and strategies, emphasizing information-intensive businesses and the fast-changing environment in which they compete. This course explores such issues as competing in both the digital and physical spaces, technology as an enabler of change, the role of the professional manager and managing in an increasingly globalized environment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8703 Introduction to Modern Information Technology Strategy**

3 Credits This course deals with applied competitive strategy. Students completing this course master a basic understanding of the competitive implications of information technology and the strategies for using information technology in business. This competence in analysis is arrived at through understanding how availability of information (through technology or otherwise) affects the basic strategic options available, and how firms and industries are likely to be affected. In addition, students are introduced to the process of evaluating potential systems innovations. They then are able to participate in strategic and systems planning from a managerial point of view.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Second Semester**

**MG 6083 Economics**

3 Credits The course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6303 Operations Management**

3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Full-semester Elective

Third Semester

**MG 6073 Marketing**

*3 Credits* This course covers marketing concepts, processes and institutions. Topics: Positioning, segmentation and product-life cycles. Integration of marketing with new product planning, design and development. Strategies for technology-based products, services and processes. Market research, consumer behavior, advertising, promotion and sales. The special character of governmental and international markets.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Full-semester Elective

**MG 9611 eIM Capstone-2**

*1.5 Credits* Second half of the eIM Capstone course. Please see MG 9603 eIM Capstone Project Course for full description. Both MG 9601 and MG 9611 courses may be taken in same semester.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Half-semester Elective **

Fourth Semester

**MG 8203 Project Management**

*3 Credits* This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

*Also listed under: CE 8203.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
- Full-semester Elective

**MG 9611 eIM Capstone-2**

*1.5 Credits* Second half of the eIM Capstone course. Please see MG 9603 eIM Capstone Project Course for full description. Both MG 9601 and MG 9611 courses may be taken in same semester.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
• Half-semester Elective **

**eIM Concentrations**

Elective courses are grouped into three different areas of interest referred to as concentrations:

- The Information Management (IM) business-driven base program concentration trains information-technology-based professionals to lead and oversee the process of invention, innovation, and entrepreneurship — what we call i2e.
- The Information Management (IMCIO) concentration allows information-technology professionals to develop their management and leadership skills with a focus on running IT as a business and receive certification from New York State (pending approval) as a CIO.
- The Information Management in Information Security and Privacy (IMCISO) concentration allows information-technology-based professionals to develop their management and leadership skills with a focus on cyber-security and receive certification from New York State* as a CISO.

**Note:**

* New York State CISO certification from Global Information Cyber Security Association

**Suggested Full-Semester Elective Courses Grouped by Concentration**

All full-semester elective courses are 3.00 credits. All eIM students may, with the written permission of the Program Director, substitute any of the following courses for any full-semester elective:

**MG 8573 Managing Cleantech and Renewable Energy Innovation**

3 Credits This course focuses on the rise of cleantech/ renewable energy (aka sustainability green, etc.) as a possible major locus of Twenty- First-Century innovation. The course deals with the diverse ways innovation is taking pace in the broadly defined cleantech arena. The course covers technology management in several distinct cleantech/renewable technology regimes and varied company venues (e.g. small, medium size and large firms). The encompasses local and global modes of cleantech/renewable energy innovation. The course requires single-firm, multi-firm and “systems” perspectives for understanding with cleantech/renewable energy innovation. The course employs both intellectual and practitioner- oriented orientations. Throughout, this course maintains a primarily managerial perspective. Students are often asked to assume the role of managers charged with the responsibility of designing, supporting and implementing a cleantech/renewable energy innovation strategy. An overarching concern is on discovering ways to improve the effectiveness of cleantech/renewable energy innovation and technology management and, where appropriate, entrepreneurship.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8783 Managing Cloud Computing**

3 Credits Many corporations and governments around the world are either planning or are in the process of migrating into a “Cloud”. Cloud computing as a technology is proliferating at a rapid pace, and as such, there are myriad definitions, architectures, and models that are being developed. Cloud is a significant part of information management, and business managers should become well versed in managing and leading this cutting edge technology. They need to clearly understand how IT components such as virtualization, automation and security fit into and define a Cloud. This course provides a Comprehensive overview of managing cloud computing. The course starts by developing a comprehensive technology foundation and then deals with the economics of cloud computing by analyzing its benefits, risks and obstacles. The course then examines Virtualization, Automation, and Security, the three essential components of cloud computing. Specific case studies on private and public clouds
are illustrated. The course concludes with the development of specific templates and roadmaps that help an organization migrate from managing traditional IT into a cloud based infrastructure.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 9683 Internship and Action Learning**

3 Credits This course provides graduate students the opportunity to work in an organization relevant to their field of interest in an action-learning context under faculty supervision. It exposes graduate students to relevant, state-of-the-art and best practices in modern management from the perspective of reflective involvement and interaction in the field. Students submit a paper and oral presentation based on work accomplishments as well as a review of written evaluation by the onsite supervisor. This course may be taken only once.

Prerequisite(s): Approval of the Program Director
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

All eIM students may take full-semester electives from any of the following concentration areas:

**Information Management (IMCIO)**

Second semester:

**MG 8753 Information Technology: Systems**

3 Credits This course prepares the student to be an educated consumer of information technology systems, thereby maximizing the strategic advantage of IT to an organization. Information technologies, architectures and products are categorized and analyzed with a view to develop and maintain the most favorable IT asset portfolio to carry out successfully business goals and strategies. Students learn techniques for making group decisions in assessing technology, outsourcing decisions, bidding on projects and negotiating contracts. Students also learn to manage a reliable, high-quality portfolio of information-technology systems, based on new insights into the relationship between the technology and business needs.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Third semester:

**MG 8763 Information Technology: Operations**

3 Credits This course covers IT operations and services. Students learn to deliver reliable, high-quality IT services through an automated, optimized IT infrastructure and operation, based on new insights into the relationship between those services and
business needs. Topics covered: IT governance, data center automation, infrastructure optimization, service management, application performance management, and security management.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Fourth semester:

**MG 7743 Advanced Trends in Technology Management and Innovation**

*3 Credits* This course explores several emerging trends in the technology management and innovation arena in the past decade. These trends include the advent of digital-based innovation in the late 1990s, which has affected profoundly how many firms conduct business; the effect of the crash of the NASDAQ in March 2000 and the September 11 attack that affected corporations, which then had to operate within major economic and creative constraints; the development of the concept of networks as it relates to a firm’s organization and strategy; the development of the wireless technology platform and its effect on technology innovation; and the development of a new innovation paradigm that suggests a relationship between information technology, creativity and business practices. The course emphasizes classroom discussions and team-based and individual projects.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Half Semester Elective Courses**

All half-semester elective courses are 1.50 credits. All eIM students may take any of the following half-semester electives.

**MG 7841 Negotiation in Technology Intensive Sectors**

*1.5 Credits* Negotiation is the art and science of creating good agreements. This course covers the science of negotiation by discussing and applying theories of negotiation. The art of negotiation is learned by practice. Students develop the art by negotiating with each other in realistic cases. A wide variety of negotiation applications is covered, including one-time and repeated negotiation, single and multi-issue negotiations, and two-party and multiparty bargaining. The class emphasizes negotiations in technology-intensive environments. This class is taught using the case method. Many examples are cases that students negotiate with each other. Students’ grades are based on their performance in these negotiations and on class participation.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7851 Leadership**

*1.5 Credits* Leaders set a vision, communicate it well and influence and inspire others to achieve their vision. However, leaders face many challenges in effectively meeting these objectives and can be aided or handicapped by effective and ineffective methods. This course develops the student’s leadership approach by analyzing individual styles, understanding their impact and then enabling each student to create the right leadership style. This course addresses fundamental leadership issues and frameworks, drawing on current organizational research, but most of all it provides students with ways of getting insights on their own leadership style. The course emphasizes hands-on experience and focuses on experiential learning. Course objectives include assessing leadership styles; developing leadership skills; and understanding the role of leadership coaching in managing teams.
**MG 7861 High-technology Entrepreneurship**

1.5 Credits This course focuses on entrepreneurship as a critical engine for wealth creation in the high-technology, innovation-intensive economy. It covers such key issues as: (1) assessing attractiveness of opportunities; (2) launching a new venture; (3) obtaining the necessary financial, human and technology resources; (4) managing the transition from a small entrepreneurial firm to a large, sustainable professionally managed but still entrepreneurial corporation; and (5) being an entrepreneur and promoting entrepreneurship in a large corporation.

**Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 7871 Intellectual Property for Technology and Information Managers**

1.5 Credits This course focuses on the role of intellectual property (e.g., patents, trade secrets, copyrights and trademarks) as a major element in modern technology and information strategy. Relevant concepts and case studies are used, with examples representing classical and digital innovations.

**Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 7881 Modern Supply Chain Management: Integration Through Technology**

1.5 Credits This course introduces the role of information technology in supply-chain management. Both qualitative and quantitative aspects of supply chain management are covered. Students discuss and analyze articles pertaining to leading-edge research and management thought. The underlying objective is to prepare participants to develop useful skills for analyzing technology, marketing, logistics, operations and broader channel management issues. Classes use the case method. A high level of class interaction is expected.

**Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 7891 Special Elective Topics for EMOT and EIM**

1.5 Credits This course covers selected key emerging trends and issues in the MOT and IM domains. The course involves discussion with industry leaders and specialists from business, government and academia. The course includes topical treatment of technologies, markets, business practices, government regulations and the relationships among them.

**Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 7971 Financing for Value Creation**

1.5 Credits This course focuses on creating strategies and financial skills required by managers of entrepreneurial and innovative firms at various stages of evolution: from new, stand-alone entrepreneurial ventures to innovative, technology driven projects of established corporations.

**Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**
MG 9651 The Modern CIO: Challenges and Opportunities

1.5 Credits The Chief Information Officer (CIO) role has evolved from keeper of the infrastructure under the CFO, to an executive managing the organization’s information and sitting at the executive table. The CIO is the key strategic agent for the organizational use of technology and is the key agent in the creative-destructive process mediated by technology. Today technology is the single greatest factor in strategic change in a firm. The CIO is the executive best positioned to manage the creative-destructive power of technology and effect firm sustainability in the face of massive changes in markets. This course helps aspiring CIOs investigate this new and evolving role, using presentations, research and interviews of industry and public sector CIOs and CTOs as well as studying the market demands for CIOs and CTOs.

Information Management (IMCISO)

Second semester:

MG 8213 Information Security and Privacy for Managers

3 Credits This course addresses the principles of information security and privacy from a risk management perspective. Students learn why security is important to the enterprise and the potential impacts of security and privacy failures. Attacks will be discussed in terms of the goals of the attackers, their capabilities and the concept and high-level technical aspects of the attack’s operation. Each of the leading security controls is discussed in terms of the kinds of attacks it is meant to thwart, the concept of the defensive operations of both technologies and related processes, and management issues concerning the control.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Third semester:

MG 7883 Information Security and Privacy: Systems

3 Credits This course centers on management issues in information security and privacy in systems planning and development. Students learn to take a risk-based approach to integrating security into the planning and development of information systems at organization and enterprise levels. Topics covered: Risk analysis and management; integrating security into system design processes; security policies; legal, ethical, and privacy issues; and security in the software design process.
Fourth semester:

MG 8333 Information Security and Privacy: Operations

3 Credits This course focuses on management issues related to information security and privacy in operations. Students design security programs and processes that foster strong lifecycle security. Topics addressed include security organization structure, security program models, economics of security, security management of operations, incident response, contingency planning, compliance, security considerations of outsourcing and global operations, and security audits.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Half Semester Elective Courses

All half-semester elective courses are 1.50 credits. All eIM students may take any of the following half-semester electives.

MG 7841 Negotiation in Technology Intensive Sectors

1.5 Credits Negotiation is the art and science of creating good agreements. This course covers the science of negotiation by discussing and applying theories of negotiation. The art of negotiation is learned by practice. Students develop the art by negotiating with each other in realistic cases. A wide variety of negotiation applications is covered, including one-time and repeated negotiation, single and multi-issue negotiations, and two-party and multiparty bargaining. The class emphasizes negotiations in technology-intensive environments. This class is taught using the case method. Many examples are cases that students negotiate with each other. **MG 9691 The Modern Chief Information Security Officer: Challenges and Opportunities**

1.5 Credits The role of Chief Cyber Security Officer or Chief Information Security Officer has evolved from securing computer systems under the CIO to an executive managing the organization’s information security and sitting at the executive table. The officer is a key strategic agent for the organizational use of cyberspace. The CISO has become the key player in the increasingly dangerous and insecure area of cyberspace, where firms must operate for maximum competitive advantage. The CISO is the executive best positioned to manage the security of the firm’s assets/infrastructure and operations in cyberspace. This course helps aspiring CISOs investigate this new and evolving role, using lectures, research, and interviews of industry and public sector CISOs, as well as by studying the market demand for CISO positions.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Master of Science in Management**

*Academic and Administrative Director: Bohdan Hoshovsky*

The Department of Technology Management at the Polytechnic Institute of NYU is the New York City/Tri-State region’s academic hub for technology and innovation management.

The Master of Science in Management degree (MSM) is recognized by the Graduate Management Admission Council as a graduate professional-management degree. NYU-Poly’s modern MSM curriculum prepares working professionals for increasing responsibility in management in technology-intensive settings and entrepreneurial venues. Unlike longer and more general management programs elsewhere, the MSM is structured so that students, without losing needed breadth, can more quickly concentrate on their specialized areas of interest—all within the larger technology and innovation management domain. In short, the MSM represents an efficient, focused, up-to-date and unique professional learning experience.

The program has been thoroughly designed to develop competencies in modern decision making and to select, allocate and direct human, financial, physical, technological and organizational resources during rapid, technology-driven change. These management skills can be applied in a broad range of professional settings in the private and public sectors, in production and service-oriented activities, and in traditional and high-technology environments.

The MSM program in management takes a pragmatic, modern, results-oriented approach that emphasizes integrating technology, people and advanced managerial approaches to create value in the marketplace and in modern organizations. Unlike a traditional MBA, the MSM possesses an efficiently designed curriculum, wherein students specialize quickly. Even subjects such as finance and marketing are taught not as special areas of expertise, but as basic tools for managerial decision making in a technology-intensive and knowledge-based environment. NYU-Poly supports these courses with a modern, Web-based infrastructure. The program continually introduces state-of-the-art material in paper and digital format. MSM graduates are ready to advance swiftly in a competitive business world.

The department tailors class schedules and teaching to the specific needs of its students, many of whom are working professionals. Classes are typically offered after regular office hours. Class structure enables participants to receive individual attention and to work closely with faculty. The course of study is for those aspiring to work in, or currently working in, technology-intensive industries and in companies that depend on technology and innovation for products and services.
After completing the core courses, MSM degree candidates build further managerial skills by choosing from the following concentrations, all of which are designed for success in a global economy in which on-going innovation is required. MSM concentrations include:

- Management, Entrepreneurship Concentration, M.S.
- Management, Electronic Business Concentration, M.S.
- Management, Project Management Concentration, M.S.
- Management, Technology Management Concentration, M.S.
- Management, Information Management and Telecommunications Management Concentration, M.S.
- Management, Human Resource Management Concentration, M.S.
- Management, Construction Management Concentration, M.S.
- Custom Concentration (only with preapproval of the MSM Program Director)

The program concludes with an overarching capstone project course, MG 9703 Project in Strategy and Innovation. Students also may elect, with the TM Chair's and MSM Program Director's pre-approval, to conclude the MSM with a MG 997X MS Thesis in Technology Management instead of MG 9703.

The program requires some fundamental knowledge of probability and statistics. Students without such a background are required to take a managerial probability and statistics course such as MA 2054, MG 5050, or its equivalent. Students with this background may apply to waive this requirement.

Visit the program’s website for further information.

**Goals and Objectives**

The goal of the Master of Science in Management is to provide the highest quality and most effectively designed learning experience that centers broadly on modern managerial arenas encompassing innovation, technology and information management, e-business and entrepreneurship in the New York City/Tri-State Region and beyond.

We encourage NYU-Poly graduate students to broaden their knowledge through our technology management course offerings. The MSM Program espouses a synergistic approach with several NYU-Poly Graduate degree programs outside of TM which have incorporated MSM courses in their curricula.

**Admission and Degree Requirements**

Criteria for admission include a bachelor’s degree with at least a B average from an accredited college or university and demonstrated evidence of motivation, maturity, and the ability to benefit from and contribute to professional graduate studies. Students must exhibit a strong desire to make a difference in fields associated with innovation, technology and modern change. An applicant who lacks certain criteria may be admitted as a nondegree (nonmatriculated) student with the subsequent opportunity to become a matriculated degree candidate. Satisfactory scores on the Graduate Record Examination (GRE) or an acceptable equivalent test, such as the Graduate Management Admission Test (GMAT), may be requested to support admission.

The MSM requires completion of 12 courses, for 36 credits with a B average or better. A maximum of nine transfer credits may be granted for graduate courses taken elsewhere prior to enrollment in MSM after they are evaluated by an MSM adviser.

**Undergraduates in Graduate MSM Classes**

With three exceptions, undergraduates may not enroll in graduate MSM classes. The exceptions are: (1) undergraduate students enrolled in a joint BS-MS program associated with the Management Department, with the approval of an adviser in the Technology Management Department, may register for Graduate Management courses; (2) undergraduate seniors with a 3.0 GPA or better, with the signature of the MSM program director, may register for MSM core courses: MG 6013, MG 6073, MG 6083,
MG 6093, MG 6503 and MG 8673; and (3) undergraduate seniors majoring in BTM with a 3.0 GPA or better, with the signature of the MSM program director, may register for any MSM course.

Advanced Certificate Programs

The Department of Technology Management offers several advanced certificate programs for professionals with work experience. Applicants for advanced certificate programs must hold bachelor's degrees. Matriculation in an advanced certificate program requires formal application and acceptance to one of the Advanced Certificate Programs. All Advanced Certificate Programs described here are comprised of five courses (totaling 15 credits) that meet individual needs and meet the certificate's requirements, as indicated below.

Students are issued certificates after they complete a sequence with an average grade of B or better. Those who choose to apply for a Master of Science in Management are able, upon admission, to apply all courses completed for a certificate toward fulfillment of the graduate degree requirements. Additional information can be obtained from the TM department.

Advanced Technology Management Certificates are offered in the following fields:

- Electronic Business Management Graduate Certificate
- Entrepreneurship Graduate Certificate
- Construction Management Graduate Certificate *
- Human Resources Management Graduate Certificate
- Information Management Graduate Certificate
- Project Management Graduate Certificate
- Technology Management Graduate Certificate
- Telecommunications Management Graduate Certificate

* Offered jointly with the CE Department. Please refer to the Construction Management section of this catalog for further details.

Graduate Certificate

Electronic Business Management Graduate Certificate

Total: 15 Credits

Required: 6 Credits

MG 7173 Enterprise Data Systems

3 Credits The course addresses modern issues of large-scale information and knowledge management through the design, development and implementation of different kinds of database technologies. The course introduces and elaborates data modeling through relational models, SQL applications, database architecture, different types of database-management systems, and data integrity and administration. The course introduces emerging database technologies, such as distributed Internet-based databases, distributed client/server databases, multidimensional databases, groupware, data warehousing, and data mining for decision
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 7503 Electronic Business Management**

*3 Credits* This course investigates the management implications of electronic business. Topics include: (1) accelerated new product development; (2) impact of technology on the value chain: the changing role of intermediaries; (3) electronic commerce: business models and strategies for survival of general lifestyle; (4) implications of “being wired”; and (5) business applications involving collaborative communication, computation and teamwork. The course material is dynamic and Internet-based, reflecting the nature of change in electronic commerce and the IT industry, and the potential implications of electronic business for managers. Students work on a project that requires following developments in the business and IT press, interviewing managers and product developers and simultaneously testing and discussing current developments in the e-commerce market space. Classes use the case method, and a high level of class participation is expected.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Electives: 9 Credits**

Select any three 3-credit Masters of Science in Management (MSM) courses to complete a particular advanced interest.

**Note:**

Other MG courses may be substituted only with the pre-approval of the MSM Program Director. All Advanced Certificates from the Department of Technology Management require 15 credits of courses with the prefix “MG”, except for the Advanced Certificate in Construction Management presented in this catalogue under Civil Engineering’s Construction Management Program.

**Entrepreneurship Graduate Certificate**

Total: 15 Credits

**Required: 6 Credits**

**MG 7703 Entrepreneurship**

*3 Credits* This course focuses on entrepreneurship and venture creation as key engines for wealth creation and successful business strategy in the modern, innovation-intensive, high-tech economy. The course deals with key issues such as: (1) assessing attractiveness of opportunities; (2) launching a new venture; (3) nurturing, growing and entrepreneurial venture; (4) obtaining the necessary financial, human and technology resources; (5) managing the transition from a small entrepreneurial firm to a large,
sustainable, professionally managed but still entrepreneurial corporation; and (6) being an entrepreneur and promoting entrepreneurship in a large corporation.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8653 Managing Technological Change and Innovation**

*3 Credits* This course focuses on how to employ a dual perspective to manage technological change and innovation effectively. One perspective is based on individual, group and organizational theory, research and practice. This body of literature, viewpoints and experience provide essential guides to manage successfully the introduction of new technologies. Realizing the full potential of new technologies requires effectively managing change to assure the commitment of all stakeholders. The second perspective is based on innovation theory, research and practice. This body of literature, viewpoints and experience provide key insights to manage effectively the process of innovation and its impact on an enterprise. The course explicitly considers a firm’s need to manage and inspire people so they can communicate and innovate effectively.

*Also listed under: MN 8653.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**Electives: 9 Credits**

select from the following:

**MG 7873 Managing Intellectual Property and Intellectual Capital**

*3 Credits* Intellectual property and intellectual capital constitute major strategic and financial assets of a modern business and can be employed to protect existing products, services and business methods and to accelerate development of new products, services and business methods. Firms can leverage intellectual property and intellectual capital to enhance their competitiveness, value and profitability. This approach is true in the physical world and in the online world of the Internet and e-business (where traditional principles of Intellectual Property Rights are often stretched and may need reinterpretation and even modification). Intellectual property is becoming increasingly complex as emerging digital technologies advance. This course is a broad and full survey of the main areas and issues associated with managing intellectual property and intellectual capital. The course concludes by examining how firms can best manage their intellectual capital.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8713 Entrepreneurial Finance**

*3 Credits* This course focuses on the financial requirements of entrepreneurial ventures and on different sources of finance available to entrepreneurs. The course develops an understanding on how to assess various entrepreneurial financial strategies. The course also examines the unique roles in the entrepreneurial finance arena of such factors as retail banks, investment banks, VCs, angels, internal sources of capital, and incubators.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8723 Managing Growing Enterprises**
This course deals with a critical challenge that potentially confronts all successful entrepreneurial small or medium-size firms: how to sustain and accelerate major growth. At some point in the life of all growing enterprises, a firm usually must change. The firm no longer can operate on a scale that is small, possibly ad hoc and overly responsive. To adapt, the firm needs to exploit successfully its success in the marketplace and the future attractiveness of its innovative products and services. This course examines how a growing firm can transform itself from a smaller to a larger enterprise. The course focuses particularly on how companies can maintain the benefits of an entrepreneurial commitment and spirit while still obtaining needed skills associated with professionally managed larger firms. In this way, fast-growing firms can take advantage of innovation-based opportunities while scaling up.

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 8733 Corporate Entrepreneurship**

This course focuses on how large corporations nurture and sustain entrepreneurship and on how entrepreneurship is an integral part of a successful large firm’s strategy and structure today. This course examines forms of internal entrepreneurship, corporate venture capital, and the obtaining of entrepreneurial capabilities via acquisition.

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**MG 8743 Entrepreneurial Marketing and Sales**

This course focuses on critical marketing and sales challenges facing entrepreneurial firms. The course examines an underlying theme of entrepreneurship: that successful innovative enterprises must deeply understand relevant markets and must effectively cultivate and reach those markets. Topics include market identification, segmentation, sales, overall market planning, niche and viral marketing, and customers as sources of innovative ideas.

**Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0**

**Note:**

Other MG courses may be substituted only with the pre-approval of the MSM Program Director. All Advanced Certificates from the Department of Technology Management require 15 credits of courses with the prefix “MG”, except for the Advanced Certificate in Construction Management presented in this catalogue under Civil Engineering’s Construction Management Program.

**Information Management Graduate Certificate**

**Total: 15 Credits**

**Required: 6 Credits**
MG 6503 Management of Information Technology and Information Systems

3 Credits This course is for managers who need to understand the role and potential contribution of information technologies in organizations. The course focuses on different information technologies and their applications in managing business-critical data, information and knowledge. The course concentrates on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process re-engineering, knowledge management and group support systems.

Telecommunications Management Graduate Certificate

Total: 15 Credits

Required: 6 Credits

MG 6553 Telecommunications Management I

3 Credits This course introduces the fundamentals of modern telecommunications and networking for current and future managers. Topics include basic concepts such as components of data communication, data transmission, Open System Interconnection (OSI), TCP/IP and other models, data link and network layers and local area networks (LANs). The course expands technical knowledge and discusses related managerial issues.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6563 Telecommunications Management II

3 Credits This course explores advanced issues and trends in modern enterprise networking. The course also examines the implications of such developments in the business environment and the infrastructural needs of organizations and clusters of
organizations; reviews ramifications of the TCP/IP revolution leading to commercialization of the Internet/World Wide Web; discusses the network infrastructure required to implement Intranets/Extranets, electronic commerce and interorganizational business communication and collaboration generally; evaluates emerging technologies (such as electronic payment systems, corporate digital libraries, push technology, multicasting, firewalls and digital signatures); and deals with the implications of Internetworking, such as digital cities, smart buildings, distance learning, telecommuting and teleconferencing.

Prerequisite(s): MG 6553.

Management, Construction Management Concentration, M.S.

The MS Management Curriculum

1. Core Courses

The six required core courses shown below provide an 18 credit foundation upon which students can pursue cutting-edge specializations within the degree program. These core courses expose students to the disciplines required of a professional manager. Students who have taken these courses elsewhere or previously at NYU-Poly, or who have had equivalent experience, may apply to substitute elective courses for such core courses; however, all students are required to complete the MSM degree’s 36 credits.

MG 6013 Organizational Behavior

3 Credits Introduction to theory, research and practice to better understand human behavior in organizations. Topics include motivation and job satisfaction; decision making; group dynamics; work teams; leadership; communication; power, politics and conflict; organization culture, structure and design; impact of technology; management of work stress; organizational change and development; and career management. Analysis of organizational behavior problems by self assessments, case studies and simulations.

Note: Distance learning available.
MG 6073 Marketing

3 Credits This course covers marketing concepts, processes and institutions. Topics: Positioning, segmentation and product-life cycles. Integration of marketing with new product planning, design and development. Strategies for technology-based products, services and processes. Market research, consumer behavior, advertising, promotion and sales. The special character of governmental and international markets.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6083 Economics

3 Credits The course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6093 Accounting and Finance

3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6503 Management of Information Technology and Information Systems

3 Credits This course is for managers who need to understand the role and potential contribution of information technologies in organizations. The course focuses on different information technologies and their applications in managing business-critical data, information and knowledge. The course concentrates on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process re-engineering, knowledge management and group support systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8673 Technology Strategy

3 Credits This course examines in depth the strategic technological decisions that a general manager faces. From entrepreneurial start-ups to established companies, in dynamic as well as mature environments, a firm must create a conscious process of formulating and implementing a technology strategy to serve its business interests. Such a strategy guides investments in research
and development, selection among and timing of alternate technologies, organization and communications, formation of alliances and funding of ventures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

Core courses should be taken as early in the program as possible.

2. Areas of Concentration

Students must formally choose and declare a 15 credit area of concentration, which can be from among those listed below or, with the MSM Program Director’s pre-approval, a set of courses that meet individual needs through a custom MSM concentration. A minimum of four courses must be selected in any one concentration area. Courses in all the available concentrations are shown below.

3. Capstone Project Course

This required, integrating three-credit course, MG 9703 Project in Strategy and Innovation, is recommended for a student’s final semester. In special cases, MG 997X MS Thesis in Technology Management may be substituted for students wishing to produce a major dissertation in a specialty with the permission of the MSM Program Director and the TM Chair. Such a student must follow the Master’s Thesis course requirements.

Concentration Course Requirements

Each MSM concentration sequence comprises a minimum of five courses totaling 15 credits. Substitutions may be made with the MSM Program Director’s pre-approval in any concentration area.

Construction Management

The Concentration in Construction Management enables engineers and other construction-industry professionals to understand relevant managerial and physical, infrastructural-technological developments. The concentration also helps students become effective and innovative by integrating construction and management.

Required:

MG 6303 Operations Management

3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.

MG 8203 Project Management

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Select Three:

CE 8243 Construction Modeling Techniques

3 Credits This course deals with various construction-modeling techniques, including the development of two-dimensional (2D) and three-dimensional (3D) design documents. Students are introduced to the development of building information models (BIM) and their associated databases, using state-of-the-art design and management systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8253 Project Management for Construction

3 Credits This course covers topics specific to developing and coordinating large projects, including organizational structures, management functions, pricing and estimating project costs, bidding and contracting, risk allocation, scheduling, time and cost control, labor relations, quality management and project life-cycle activities.

Also listed under: MG 8253.
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

or

MG 8253 Project Management for Construction

3 Credits The course covers topics specific to developing and coordinating large projects, including organizational structures, management functions, pricing and estimating project costs, bidding and contracting, risk allocation, scheduling, time and cost control, labor relations, quality management and project life-cycle activities.

Also listed under: CE 8253
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8263 Construction Cost Estimating

3 Credits This course covers estimating and cost control from the viewpoint of contractors and construction engineers; details of estimating with emphasis on labor, materials, equipment and overhead.
MG 8263 Construction Cost Estimating

3 Credits This course covers estimating and cost control from the viewpoint of contractors and construction engineers; details of estimating with emphasis on labor, materials, equipment and overhead.

Also listed under: CE 8263
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8273 Contracts and Specifications

3 Credits This course covers principles of contract law as applied to the construction industry and legal problems in preparing and administering construction contracts.

Also listed under: MG 8273.

MG 8273 Contracts and Specifications

3 Credits This course covers principles of contract law as applied to the construction industry and legal problems in preparing and administering construction contracts.

Also listed under: CE 8273
Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

CE 8353 Construction Scheduling

3 Credits Students will be instructed in advanced Critical Path Method (CPM) construction scheduling techniques including the use of Primavera Project Planner v. 7.0. The course will cover Precedence Diagramming Method (PDM), project resources and resource leveling, schedule updating, schedule impacts of date constraints, project time and cost trade-offs, activity duration estimating, work breakdown structures, differing scheduling requirements on different types of construction projects and an overview of construction contract scheduling specifications. An introduction to other scheduling methodologies and the use of schedules in construction claims will also be addressed.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:

** For complete Construction Management course descriptions please see course listings in the NYU-Poly Catalog section of the Construction Management Program. Registration may require permission from a Construction Management adviser.

Core courses should be taken as early in the program as possible.

2. Areas of Concentration

Students must formally choose and declare a 15 credit area of concentration, which can be from among those listed below or, with the MSM Program Director’s pre-approval, a set of courses that meet individual needs through a custom MSM concentration. A minimum of four courses must be selected in any one concentration area. Courses in all the available concentrations are shown below.

3. Capstone Project Course

This required, integrating three-credit course, MG 9703 Project in Strategy and Innovation, is recommended for a student’s final semester. In special cases, MG 997X MS Thesis in Technology Management may be substituted for students wishing to produce a major dissertation in a specialty with the permission of the MSM Program Director and the TM Chair. Such a student must follow the Master’s Thesis course requirements.

Concentration Course Requirements
Each MSM concentration sequence comprises a minimum of five courses totaling 15 credits. Substitutions may be made with the MSM Program Director’s pre-approval in any concentration area.

Electronic Business

The Electronic Business Management Concentration focuses on the arena of electronic business and the Internet. Students study the process of digital-intensive market creation and the key aspects for managing a firm that operates increasingly in digital space. Relevant methods and concepts for effective electronic business decision making are explored and applied.

Required:

**MG 7173 Enterprise Data Systems**

*3 Credits* The course addresses modern issues of large-scale information and knowledge management through the design, development and implementation of different kinds of database technologies. The course introduces and elaborates data modeling through relational models, SQL applications, database architecture, different types of database-management systems, and data integrity and administration. The course introduces emerging database technologies, such as distributed Internet-based databases, distributed client/server databases, multidimensional databases, groupware, data warehousing, and data mining for decision support.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

- MG 7503 Management of Electronic Business

Select Three:

Select three 3-credit courses of interest (for nine credits) with an “MG” or “FRE*” prefix.

Management, Entrepreneurship Concentration, M.S.

The MS Management Curriculum

1. Core Courses

The six required core courses shown below provide an 18 credit foundation upon which students can pursue cutting-edge specializations within the degree program. These core courses expose students to the disciplines required of a professional manager. Students who have taken these courses elsewhere or previously at NYU-Poly, or who have had equivalent experience, may apply to substitute elective courses for such core courses; however, all students are required to complete the MSM degree’s 36 credits.

**MG 6013 Organizational Behavior**

*3 Credits* Introduction to theory, research and practice to better understand human behavior in organizations. Topics include motivation and job satisfaction; decision making; group dynamics; work teams; leadership; communication; power, politics and
conflict; organization culture, structure and design; impact of technology; management of work stress; organizational change and development; and career management. Analysis of organizational behavior problems by self assessments, case studies and simulations.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6073 Marketing

3 Credits This course covers marketing concepts, processes and institutions. Topics: Positioning, segmentation and product-life cycles. Integration of marketing with new product planning, design and development. Strategies for technology-based products, services and processes. Market research, consumer behavior, advertising, promotion and sales. The special character of governmental and international markets.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6083 Economics

3 Credits The course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6093 Accounting and Finance

3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6503 Management of Information Technology and Information Systems

3 Credits This course is for managers who need to understand the role and potential contribution of information technologies in organizations. The course focuses on different information technologies and their applications in managing business-critical data, information and knowledge. The course concentrates on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process re-engineering, knowledge management and group support systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0
MG 8673 Technology Strategy

3 Credits This course examines in depth the strategic technological decisions that a general manager faces. From entrepreneurial start-ups to established companies, in dynamic as well as mature environments, a firm must create a conscious process of formulating and implementing a technology strategy to serve its business interests. Such a strategy guides investments in research and development, selection among and timing of alternate technologies, organization and communications, formation of alliances and funding of ventures.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Note:
Core courses should be taken as early in the program as possible.

A minimum of four courses must be selected in any one concentration area. Courses in all the available concentrations are shown below.

3. Capstone Project Course

This required, integrating three-credit course, MG 9703 Project in Strategy and Innovation, is recommended for a student’s final semester. In special cases, MG 997X MS Thesis in Technology Management may be substituted for students wishing to produce a major dissertation in a specialty with the permission of the MSM Program Director and the TM Chair. Such a student must follow the Master’s Thesis course requirements.

Concentration Course Requirements

Each MSM concentration sequence comprises a minimum of five courses totaling 15 credits. Substitutions may be made with the MSM Program Director’s pre-approval in any concentration area.

Entrepreneurship

The Entrepreneurship Concentration is offered for the manager, professional or specialist interested in entrepreneurial management—as an entrepreneur starting a new business, as an “intrapreneur” in a large, established firm, or as a professional (e.g., venture capitalist) interested in playing a role in new enterprises. This concentration develops a valuable entrepreneurial state of mind for any business setting. Modern entrepreneurial concepts and cases are learned and applied.

Required:

MG 7703 Entrepreneurship
3 Credits This course focuses on entrepreneurship and venture creation as key engines for wealth creation and successful business strategy in the modern, innovation-intensive, high-tech economy. The course deals with key issues such as: (1) assessing attractiveness of opportunities; (2) launching a new venture; (3) nurturing, growing and entrepreneurial venture; (4) obtaining the necessary financial, human and technology resources; (5) managing the transition from a small entrepreneurial firm to a large, sustainable, professionally managed but still entrepreneurial corporation; and (6) being an entrepreneur and promoting entrepreneurship in a large corporation.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8653 Managing Technological Change and Innovation**

3 Credits This course focuses on how to employ a dual perspective to manage technological change and innovation effectively. One perspective is based on individual, group and organizational theory, research and practice. This body of literature, viewpoints and experience provide essential guides to manage successfully the introduction of new technologies. Realizing the full potential of new technologies requires effectively managing change to assure the commitment of all stakeholders. The second perspective is based on innovation theory, research and practice. This body of literature, viewpoints and experience provide key insights to manage effectively the process of innovation and its impact on an enterprise. The course explicitly considers a firm’s need to manage and inspire people so they can communicate and innovate effectively.

*Also listed under: MN 8653.*

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Select Two:

- MG 7733 Managing Intellectual Property and Intellectual Capital

**MG 8713 Entrepreneurial Finance**

3 Credits This course focuses on the financial requirements of entrepreneurial ventures and on different sources of finance available to entrepreneurs. The course develops an understanding on how to assess various entrepreneurial financial strategies. The course also examines the unique roles in the entrepreneurial finance arena of such factors as retail banks, investment banks, VCs, angels, internal sources of capital, and incubators.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 8723 Managing Growing Enterprises**

3 Credits This course deals with a critical challenge that potentially confronts all successful entrepreneurial small or medium-size firms: how to sustain and accelerate major growth. At some point in the life of all growing enterprises, a firm usually must change. The firm no longer can operate on a scale that is small, possibly ad hoc and overly responsive. to adapt, the firm needs to exploit successfully its success in the marketplace and the future attractiveness of its innovative products and services. This course examines how a growing firm can transform itself from a smaller to a larger enterprise. The course focuses particularly on how companies can maintain the benefits of an entrepreneurial commitment and spirit while still obtaining needed skills associated with professionally managed larger firms. In this way, fast-growing firms can take advantage of innovation-based opportunities while scaling up.
MG 8743 Entrepreneurial Marketing and Sales

3 Credits  This course focuses on critical marketing and sales challenges facing entrepreneurial firms. The course examines an underlying theme of entrepreneurship: that successful innovative enterprises must deeply understand relevant markets and must effectively cultivate and reach those markets. Topics include market identification, segmentation, sales, overall market planning, niche and viral marketing, and customers as sources of innovative ideas.

Each MSM concentration sequence comprises a minimum of five courses totaling 15 credits. Substitutions may be made with the MSM Program Director’s pre-approval in any concentration area.

Human Resource Management

The Concentration in Human Resource Management prepares professionals for today’s technology-intensive environment. The program provides the knowledge and techniques to deal with human-resource issues and to achieve high-quality innovation and productivity in often-turbulent organizational settings. The changing nature of work and shifting professional expectations are explored.

Required:

**MG 6123 Human Resource Management**

*3 Credits* This course introduces the broad range of human resource functions and their organizational role. It addresses issues in managing people that have an impact not only on HR professionals but also on line managers. The course is divided into four modules: (1) an overview of HRM from a strategic perspective; (2) the management of human resources, including recruitment and selection, performance management, compensation and benefits, training and career support; (3) human resource challenges, including diversity, procedural justice and ethics, collective bargaining and managing change and innovation; and (4) professional roles in HRM.

*Note: Distance learning available.*

Information Management and Telecommunications Management

The Concentration in Information Management and Telecommunications Management is for professionals in information technology (IT), telecom and networking, programmers, systems experts and others with IT-related career goals and experience. Students learn to understand how IT and networking enhance the effectiveness of modern firms and the ability to manage creative and professional people.

Required:

MG 6553 Telecommunications Management I
3 Credits This course introduces the fundamentals of modern telecommunications and networking for current and future managers. Topics include basic concepts such as components of data communication, data transmission, Open System Interconnection (OSI), TCP/IP and other models, data link and network layers and local area networks (LANs). The course expands technical knowledge and discusses related managerial issues.

Core courses should be taken as early in the program as possible.

2. Areas of Concentration
Students must formally choose and declare a 15 credit area of concentration, which can be from among those listed below or, with the MSM Program Director’s pre-approval, a set of courses that meet individual needs through a custom MSM concentration. A minimum of four courses must be selected in any one concentration area. Courses in all the available concentrations are shown below.

3. Capstone Project Course

This required, integrating three-credit course, MG 9703 Project in Strategy and Innovation, is recommended for a student’s final semester. In special cases, MG 997X MS Thesis in Technology Management may be substituted for students wishing to produce a major dissertation in a specialty with the permission of the MSM Program Director and the TM Chair. Such a student must follow the Master’s Thesis course requirements.

Concentration Course Requirements

Each MSM concentration sequence comprises a minimum of five courses totaling 15 credits. Substitutions may be made with the MSM Program Director’s pre-approval in any concentration area.

Technology Management

The Technology Management Concentration is for managers, engineers and other professionals in technology-intensive environments and for those involved with technology-intensive products, processes or services. The program provides the modern methods and concepts necessary to make strategic technology-investment decisions; to understand technology and innovation strategy, product-life cycles and competitive factors; and to develop special skills need to manage creative people and professionals.

Required:

MG 8203 Project Management

3 Credits This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8653 Managing Technological Change and Innovation

3 Credits This course focuses on how to employ a dual perspective to manage technological change and innovation effectively. One perspective is based on individual, group and organizational theory, research and practice. This body of literature, viewpoints and experience provide essential guides to manage successfully the introduction of new technologies. Realizing the full potential of new technologies requires effectively managing change to assure the commitment of all stakeholders. The second perspective is based on innovation theory, research and practice. This body of literature, viewpoints and experience provide key insights to manage effectively the process of innovation and its impact on an enterprise. The course explicitly considers a firm’s need to manage and inspire people so they can communicate and innovate effectively.
Also listed under: MN 8653.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Select Three:

Select three 3-credit courses of interest (for nine credits) with an “MG” or “FRE*” prefix.

Note:

* FRE courses may require pre-approval from the FRE Department.

Management of Technology

(Formerly - Accelerated Management of Technology Program)

Academic Director: Joseph Nadan
Administrative Director: Vivek Veeraiah

Overview

The Polytechnic Institute of NYU Master’s Degree Program in Management of Technology (MOT) was created for professionals who aim to make a difference in an economy where bridging the technology and business worlds is crucial. It introduces participants to the latest thinking and best practices in technology management and innovation. For forward-thinking managers, the MOT Program is a proven and unique path to leadership in the Twenty-First Century.

One of the first accredited universities to offer an advanced degree in MOT, the Polytechnic Institute of NYU is a recognized leader in the field, and has offered the MOT program for almost two decades. Rather than grafting a few courses onto a traditional MBA program, the MOT Program possesses a thoroughly innovative integrated curriculum. Whether a student is a recent college graduate, or in the early, middle, or advanced stages of their career, the MS program in Management of Technology at NYU-Poly prepares students to take part in this process of invention, innovation, and entrepreneurship —what we like to call i2e.

The MOT program also welcomes students into a community of learners that includes faculty, strategic partners, industry leaders and business networks around the world. The Institute for Technology and Enterprise (ITE) — New York’s premiere research and educational hub for management and innovation — is one of our major partners. It hosts round-tables and workshops with industry leaders and scholars, ensuring our students benefit from a wealth of resources and ideas.

Key Characteristics of the MOT Program: Flexible Scheduling

The MOT program is offered with a curriculum that bridges the gap between technology and business, and may be completed in accelerated (4), full-time (3), or part-time (2) or (1) formats in anywhere from 10 to 44 months. The number in parentheses represents the number of 3.0 credit courses completed in each semester in each format. Due to this scheduling flexibility, it is well-suited for engineers and scientists with increasing managerial responsibility, as well as professionals, functional and business managers, and entrepreneurs in financial services, IT, security, design, retailing, media/entertainment and other increasingly technological environments. Courses take place in the evening, which means there is minimal disruption to a student’s busy daytime routine.
Goals and Objectives

By the time students graduate from the MOT program, they will:

- Possess the tools to analyze strategic and global management issues;
- Be able to apply knowledge of technology and management in diverse settings;
- Understand how to formulate new business models around technology-enabled innovation; and
- Develop the skills and confidence to assume leadership positions in established firms, as well as new ventures.

Admissions Criteria

The MOT program is selective. Candidates must have an undergraduate degree from an institution of higher learning, either in the United States or abroad. Candidates must have a minimum 3.0 grade-point average or equivalent in their undergraduate degree. Candidates are required to take the Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE). International students must take the TOEFL exam.

How to Apply

The MOT Master’s Degree Program uses a Self-Managed Application (SMA) admission process in which applicants gather the required materials and forward them in a single envelope to:

MOT Program Administrative Director
Polytechnic Institute of NYU
55 Broad Street, Suite 13B
New York, NY 10004

Application Checklist

1. Complete the application and attach a professional resume and the application fee.
2. A Statement of Purpose that describes in brief:
   a. Prior background and experience
   b. Motivation in pursuing graduate studies
   c. Long-term career goals
3. Please ask the registrar at all colleges and universities attended to send official transcripts directly to the applicant. For the transcripts to remain official, they must be and remain sealed in the original envelope. Opened transcripts are not considered official.
4. Please arrange for two (2) letters of recommendation to be sent directly to the applicant. These letters are generally from a supervisor or high-level colleague who knows the applicant’s professional work. As with transcripts, to be considered official, recommendations must be sent directly from the recommender to the applicant and remain unopened. The applicant should write his or her name at the top, sign the waiver if they do not wish to see the recommendation and give one form and one enclosed envelope to each person writing in support of the application.

For more information, contact the MOT program Administrative Director:

Tel: (718) 260-4015
Fax: (212) 547-7029
Or e-mail: mot-im@poly.edu
Management of Technology, M.S.

Program Structure and Curriculum

The MOT Program comprises 12 courses (see listing below) for 36 credits. Courses for the MOT program are held during the evening at 55 Broad Street in Lower Manhattan and at the Brooklyn campus of Polytechnic. Full time students may complete this MS program in 10 calendar months by completing 4 courses per semester for 3 semesters or in 15 calendar months by completing 3 courses per semester for 4 semesters. Part-time students may take from one to two courses per semester, completing the program in 22 to 44 calendar months. Participants in the MOT Program receive a Master of Science in Management of Technology. The MOT Program is also offered in Executive format; please refer to the Management of Technology Executive Master’s Program catalog pages. For most current information, visit http://www.poly.edu/amot

The MOT program’s series of required courses provide participants with a deep understanding of the foundations of managerial competencies needed to manage innovation in the evolving business environment. In addition, participants can choose an elective from the Department of Technology Management or from other areas of the Institute that can enhance their understanding of a particular area of interest in the broadly defined arena of technology management.

Required Courses

MG 6093 Accounting and Finance

3 Credits The course covers elements of accounting and finance of importance to managers. Topics: Analysis of principles and practices of the finance function. Financing methods for internal and external ventures and innovations; capital budgeting; R&D portfolio analysis. Contrast of strategic perspectives emphasizing innovation and development with those emphasizing short-term return and investment.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 8653 Managing Technological Change and Innovation

3 Credits This course focuses on how to employ a dual perspective to manage technological change and innovation effectively. One perspective is based on individual, group and organizational theory, research and practice. This body of literature, viewpoints and experience provide essential guides to manage successfully the introduction of new technologies. Realizing the full potential of new technologies requires effectively managing change to assure the commitment of all stakeholders. The second perspective is based on innovation theory, research and practice. This body of literature, viewpoints and experience provide key insights to manage effectively the process of innovation and its impact on an enterprise. The course explicitly considers a firm’s need to manage and inspire people so they can communicate and innovate effectively.

Also listed under: MN 8653.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6013 Organizational Behavior
3 Credits Introduction to theory, research and practice to better understand human behavior in organizations. Topics include motivation and job satisfaction; decision making; group dynamics; work teams; leadership; communication; power, politics and conflict; organization culture, structure and design; impact of technology; management of work stress; organizational change and development; and career management. Analysis of organizational behavior problems by self assessments, case studies and simulations.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6503 Management of Information Technology and Information Systems

3 Credits This course is for managers who need to understand the role and potential contribution of information technologies in organizations. The course focuses on different information technologies and their applications in managing business-critical data, information and knowledge. The course concentrates on the current state of IT in organizations; challenges and strategic use of IT; IT infrastructure and architecture; building, implementing and managing IT applications; and emerging issues such as intelligent systems, business-process re-engineering, knowledge management and group support systems.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6083 Economics

3 Credits This course examines the fundamentals of microeconomics needed by managers. Topics: Demand theory (theory of the consumer) including models of demand, demand elasticities and demand forecasting. Supply theory (theory of the firm) including diminishing returns, profit-maximizing production levels, labor/capital tradeoffs, and long-run vs. short-run issues. Market structures and how they affect optimal production and profit levels. Positive and negative externalities and government intervention including regulation, tariffs and subsidies. Selected applied topics. All topics are presented with examples that emphasize managerial applications.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6303 Operations Management

3 Credits This course covers analytical techniques to design and operate production and service systems, including facility layouts and locations, capacity planning, job sequencing, inventory control and quality control. Topics include introductory linear programming and other formal methods, and case studies and computer usage.

Also listed under: MN 6303.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6073 Marketing

3 Credits This course covers marketing concepts, processes and institutions. Topics: Positioning, segmentation and product-life cycles. Integration of marketing with new product planning, design and development. Strategies for technology-based products, services and processes. Market research, consumer behavior, advertising, promotion and sales. The special character of governmental and international markets.
MG 8203 Project Management

This course examines the management of technology-based projects, ranging from individual research and development to large scale and complex technological systems. Topics: Feasibility and risk analyses. Project selection and portfolio optimization. Functional and administrative structures, coordination and scheduling of activities, personnel planning, negotiations and contracts, cost estimation, capital budgeting, cost controls, effective matrix management.

Also listed under: CE 8203.

MG 7953 Global Innovation

This course focuses on global technology-enabled innovation. Topics covered include accessing global sources of innovation, coordination and organization of activities worldwide, new product development globally, the role of revitalized global R&D, growing prominence of IT and e-Business in global innovation and the role of alliances and linkages with customers, suppliers and other third parties.

MG 997X MS Thesis in Technology Management

Students choose original investigation topics for their theses. While they conduct research and draft their theses, students are required to confer with their advisers and to submit progress reports. A final written report is required at completion. The department may request an oral examination.

Prerequisite(s): Degree status and approval of supervising professor, MSM Program Director and TM department chair.

Footnotes

* To fulfill a requirement for a technology-related course, participants can substitute other courses given by the Department of Technology Management in this field, e.g., MG 6603 Management of New and Emerging Technologies; MG 7503 Electronic Business Management; or another technology-related course with permission of the Program Director.

** MOT Electives include any 3.0 credit graduate course offered by the Department of Technology Management, including MG 9683 Internship and Action Learning. With the MOT Program Director’s permission, MOT students also may choose an elective 3.0 credit graduate courses offered by another NYU-Poly department.

Organizational Behavior
Academic Director: Harold G. Kaufman
Administrative Director: Vivek Veeraiah

Goals and Objectives

The graduate program in Organizational Behavior is a unique and pioneering curriculum which prepares professionals and managers to address critical human problems in rapidly changing organizations in today’s technology-driven climate. The program provides the knowledge, skills and technologies to deal effectively with human resource issues in order to achieve high quality innovation and productivity as well as job satisfaction in turbulent organizational settings. The changing nature of work and shifting professional needs are addressed by the continuous updating of the curriculum and addition of cutting-edge courses that focus on the effective management of people and organizations within the context of technological and other types of change.

Graduate Program

The course of study for the Master of Science in Organizational Behavior is for individuals with a wide variety of experiences. These range from human resource practitioners who need to update and broaden their qualifications to those with diverse backgrounds who wish to acquire the expertise to enter a field related to one of the following concentrations:

- Human Resource Management
- Management of Change
- Training and Development
- Human Resource Information Systems

In addition, those pursuing careers as managers in a variety of functions benefit greatly from this program. The courses provide the knowledge, skills and technologies needed to effectively manage people, which is essential to being a successful manager.

Some of the unique aspects of the program focus on topics that address rapidly changing organizational environments, such as:

- Managing the impact of changing technology on employees and organizations;
- Motivating knowledge workers to stay up-to-date with developments in their field;
- Conflict resolution in turbulent and uncertain environments;
- Designing new organizational structures that are more responsive to rapid change;
- Improving utilization of knowledge workers through talent management and coaching;
- Training and development innovations to cope with changing job requirements;
- Utilizing job and workplace design to improve motivation and performance;
- Applying career management to knowledge workers in restructuring firms;
- Addressing human resource issues in organizations affected by globalization;
- Developing effective leadership and teamwork in dealing with change;
- Outsourcing as a human capital strategy to address changing organizational needs; and
- Enhancing organizational effectiveness through human resource information systems and web-based human resource technologies.

Because most Polytechnic students are working professionals, many with managerial responsibilities, class schedules are offered in the evenings after normal office hours. Seminar-style classes, emphasizing participation and discussion, enable Organizational Behavior students to receive individual attention from faculty and to work closely with classmates, often in teams. The degree can be completed in one to two years, depending on the course load.

Professional Recognition and Career Development
The Society for Human Resource Management (SHRM) has assessed the Organizational Behavior HR curriculum as being aligned with the guidelines of SHRM. Moreover, the Organizational Behavior Program sponsors an active, award-winning student chapter of the SHRM that was selected as one of the top ten in the country. The chapter provides extracurricular opportunities for professional seminars, workshops, networking and mentoring to enhance individual career development.

With the unique knowledge and skills acquired from the Organizational Behavior Program, combined with professional development activities, graduates have been able to pursue successful careers in prestigious firms, ranging from high-tech to financial institutions as well as in the public sector, or as private consultants.

Admission and Degree Requirements

Criteria for admission include a bachelor’s degree with at least a B average from an accredited college or university and demonstrated evidence of motivation, maturity and the ability to benefit from and contribute to professional graduate studies in Organizational Behavior. Applicants who do not meet all the criteria may be admitted as nondegree students with the opportunity, subsequently, to become a degree candidate. Satisfactory scores on the Graduate Record Examination (GRE) or the Graduate Management Admission Test (GMAT) may be used as additional support for admission to degree studies.

Students who have not completed an undergraduate course in statistics must enroll in MG 5050 Probability and Managerial Statistics or its equivalent. Students without an adequate background in computers may be required to enroll in one or more of the preparatory courses offered by the Department of Computer and Information Sciences. These courses are in addition to the degree requirements of 12 courses or 36 credits, which must be completed with an average of B or better.

A maximum of 9 transfer credits may be granted for graduate courses completed elsewhere, as evaluated by the Academic Director.

The most current information on the Master of Science program in Organizational Behavior can be found on the program's website.

Advanced Certificate Programs

Graduate certificate programs, designed primarily for professionals and managers with work experience, are offered in the two following fields:

- Organizational Behavior Graduate Certificate
- Human Resources Management Graduate Certificate

Individualized programs enable specialists and generalists to improve and update their knowledge and skills in critical areas ranging from talent management to the redesign of jobs and organizations to human resource information systems.

Applicants for certificate programs must hold a bachelor’s degree. A certificate program requires five courses. In consultation with the Academic Director, students may design a custom-made certificate program with relevant courses to meet their professional development requirements.

Those who choose to apply for a Master of Science in Organizational Behavior are able, upon admission, to apply all courses completed for a certificate toward fulfillment of the graduate degree requirements. Additional information may be obtained from the Academic Director of the Organizational Behavior Program.

Programs for Distance Learning Students

The Master of Science in Organizational Behavior as well as the advanced certificate programs may be completed partly or completely via distance learning. The program offers fully accredited graduate courses, which are blended in a unique format to allow students the opportunity to actually participate in classroom lectures and discussions. This format has proven to be
effective for students who cannot physically attend the class because of work demands, home/child care responsibilities or medical disabilities. Permission to participate as a distance learning student must be obtained from the Academic Director.

Graduate Certificate

Human Resources Management Graduate Certificate

Total: 15 Credits

Required: 9 Credits

MG 6123 Human Resource Management

3 Credits This course introduces the broad range of human resource functions and their organizational role. It addresses issues in managing people that have an impact not only on HR professionals but also on line managers. The course is divided into four modules: (1) an overview of HRM from a strategic perspective; (2) the management of human resources, including recruitment and selection, performance management, compensation and benefits, training and career support; (3) human resource challenges, including diversity, procedural justice and ethics, collective bargaining and managing change and innovation; and (4) professional roles in HRM.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6173 Performance Management and Reward Systems

3 Credits Students learn to create performance-appraisal systems that include theoretical and applied issues. Topics include coaching and feedback; team settings; multi-source feedback and selfratings; executive performance; and improving evaluations. The course examines the role of compensation, benefits and other rewards in attracting, retaining and motivating employees, including technical and professional personnel.

Corequisite(s): MG 6123 or instructor’s permission.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6223 Staffing Organizations

3 Credits This course examines the design and management of successful staffing practices used to build, deploy and retain a quality workforce to achieve organizational effectiveness and individual job satisfaction. Topics include staffing strategy; human-resource planning and workforce diversity; job analysis; recruitment; hiring methods; the reliability and validity of employee-
assessment methods; and retention management. The course reviews psychological theories of personnel assessment and integrates legal issues pertaining to staffing practices.

Corequisite(s): MG 6123 or instructor’s permission.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

Electives: 6 Credits

Selected from the following:

**MG 6133 Labor Relations**

3 Credits This course introduces labor relations from various perspectives in both union and nonunion organizations. Topics include labor movement history; the current state of the labor movement; labor statistics; labor laws and practices; union organizing; negotiating; economics and labor unions; contract administration; achieving cooperation; grievances; labor and employment arbitration; employee discipline; engineering and professional unions, public sector unions; global aspects; and the future for unions.

Note: Distance learning available.

Weekly Lecture Hours: 3 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6181 Talent Management**

1.5 Credits In this survey course, students gain a knowledge and understanding of the strategies and range of processes, methods and tools that organizations use in effective Talent Management programs. The focus is on developing and managing leadership talent and on Talent Management practices for general management, professional, technical and other positions. Topics include identifying and competing for critical talent pools; alignment and integration of HR practices; recruiting and employment branding; identifying, selecting, developing, reviewing and managing leadership talent; retention and recognition strategies; and career paths and career planning.

Corequisite(s): MG 6123 or instructor’s permission.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6201 Consulting in Organizations**

1.5 Credits This course provides a practical orientation to consulting in organizations within an academic framework. The course prepares students from a variety of disciplines for roles as internal and external consultants by building knowledge and skills to successfully take a client and project from entry through termination and evaluation. Each student is required to take a project from conception to presentation. This project gives students an in-depth understanding of the details and issues that consultants need to address.

Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

**MG 6211 Outsourcing: A Human Capital Strategy**
1.5 Credits This comprehensive course prepares students from a variety of disciplines with the knowledge and skills necessary for a “make or buy” decision when considering outsourcing human capital. Topics include strategic implications, financial aspects, project management, internal consulting, metrics, legal considerations, development of an effective template RFP (request for proposal), internal communication details, and management of the vendor/provider relationship.

Corequisite(s): MG 6123 or instructor’s permission.
Weekly Lecture Hours: 1.5 | Weekly Lab Hours: 0 | Weekly Recitation Hours: 0

MG 6233 Training in Organizations

3 Credits This overview of numerous forms of training and related learning activities found in the modern workplace includes management development, technical training, career planning and mentoring. The course focuses on training as both an asset to the organization and a necessity for delivering goods or services that customers value. Topics include needs analysis, preparation of employees for jobs, training program design, traditional training methods, computer-based methods, development, implementation and evaluation of training, targeting various groups with special training needs, and management development.

Note: Distance learning available.
